About this manual

This manual explains how to use the Jaman Agro tea factory management system: what every menu does, what every field on every form means, and what to do day by day. It is written for the people who will use the system at the factory. You do not need any computer knowledge beyond using a web browser.

Who should read what

If you are…	Read these chapters first	Then, when needed
The **factory manager** (enters the daily work)	1–4, then 5–13 and 16	Chapters 14–20 as needed
The **owner** (watches the business)	1–3, 5.4, 14, 15	Chapter 19 for the rules behind the numbers
The **administrator** (looks after accounts)	1–3, 16, 17	The whole manual

How this manual is written

- Names on the screen — menus, buttons and field labels — are written in **bold green**, for example **Record delivery**.
- A path such as **Green leaf** → **Leaf intake** means: in the left-hand menu, under the heading “Green leaf”, click “Leaf intake”.
- Step-by-step instructions are numbered. Do the steps in order.
- Coloured boxes mark tips, notes, important warnings and worked examples with real numbers.
- The screenshots use **made-up sample data** (suppliers such as “Rahim Uddin”, customers such as “Karim Store”). Your screens will show your own factory’s data.
- The screenshots are in English. Every screen can also be shown in Bangla — see section 2.4. Appendix B lists every menu name in both languages.

> **Note:** All amounts are in Bangladeshi taka (৳) and all weights are in kilograms (kg). The system keeps two decimal places and rounds .5 upwards, so ৳9,200.975 becomes ৳9,200.98.

1. Introduction

1.1 What the system does

Jaman Agro buys green leaf from tea gardens, makes CTC tea, and sells it at auction and to retail buyers. The system follows every kilogram along that path and every taka that goes with it:

Step	Where in the system	What is recorded
1. Leaf arrives at the gate	**Leaf intake**	Each delivery: supplier, whether the supplier brought it or a factory vehicle collected it, weight, moisture deduction and net weight. The day's rate (or site rate) prices it.
2. Suppliers are paid	**Supplier payments**	Payments for leaf and advances. Each supplier has a running account.
3. Tea is made	**Production**	Each batch: green leaf used and made tea sorted by grade. Recovery % is worked out.
4. Tea is stored	**Made tea stock**	A ledger of every kilogram of each grade coming in and going out.
5. Tea is sold at auction	**Auction invoices**	Packing, dispatch, the auction result and the broker's payment.
6. Tea is sold directly	**Retail sales**, **Customers**	Sale memos, credit sales and money received from customers.
7. Workers are paid	**Attendance**, **Contract work**, **Wages**	Hours of the hourly workers, piece work of the contract workers, bonuses and the twice-weekly pay.
8. Running costs are paid	**Expenses**	Factory costs (fuel, electricity, repairs…) and the running costs of the factory's own vehicles.
9. The owner checks the business	**Dashboard**, **Reports**, **Cash book**	Daily figures, monthly trends, profit, cost per kg and cash flow.

Because each step uses the figures from the step before, a kilogram weighed at the gate shows up all the way through to the sale and the year-end report. You enter each fact **once**; the system does the arithmetic.

1.2 Who uses the system

Every person who uses the system has their own account with one of three **roles**. The role decides what that person can see and do.

Role	Who	What they can do
Admin	The system administrator (developer)	Everything. Creates and manages all accounts, sees the activity log of every change, and approves or rejects requests to unlock old entries.

Role	Who	What they can do
Manager	The factory manager	Records all daily work: leaf, payments, production, stock, sales, workers, expenses — and corrects it for three days, after which a correction needs the administrator's approval. Manages suppliers, grades, vehicles, warehouses, brokers, customers, workers, job rates and expense categories.
Owner	The owner of Jaman Agro	Sees every page, statement and report, and can print them. Cannot enter or change anything.

Appendix A has a full table of which role can use which screen.

1.3 Ideas used throughout the system

Term	Meaning
Green leaf	Fresh tea leaf bought from the gardens.
Gross weight	What the scale shows for a delivery, including the bags or baskets.
Bags / basket weight (tare)	The weight of the bags or baskets, taken off the gross weight.
Moisture deduction	Weight taken off a delivery for excess water, measured at the factory. It is entered in kg (the usual way) or as a percentage of the leaf weight.
Net weight	What the supplier is paid for: gross − bags − moisture deduction.
Leaf rate	The price per kg of green leaf for a day, for leaf the supplier brings to the factory. It is set once per day and prices every such delivery of that day.
Site rate	A second, lower price per kg for the same day, for leaf the factory collects from the garden with its own vehicle. The factory carries the transport, so the garden is paid less.
Made tea	Finished, dried and sorted tea.
Grade	The size class tea is sorted into, such as BOP, PF or Dust.
Recovery	Made tea as a percentage of the green leaf used. For CTC it is usually 20–24%.
Balance	What one side owes the other on an account. For a supplier, a positive balance is what the factory owes them; a balance marked "advance" is money they have taken ahead of their leaf.
Invoice (auction)	A lot of packages of one grade sent to the auction through a broker.
Memo (retail)	A sale document for tea sold directly to a buyer.
Locked entry	An entry recorded more than three days ago. The manager can no longer change or delete it without the administrator's approval (chapter 16).

> **Important:** Nothing in the system changes quietly. Every sign-in and every change — who made it, when, and the old and new values — is written to the activity log, which the administrator can read (chapter 17.2). An entry changed after it was first saved also carries a small **edited** mark.

2. Getting started

2.1 Opening the system

The system runs in a web browser such as Google Chrome, Microsoft Edge or Firefox, on a computer, tablet or phone. Open the address your administrator gave you. You will see the Jaman Agro front page (Figure 1). Click **Staff login** at the top right.

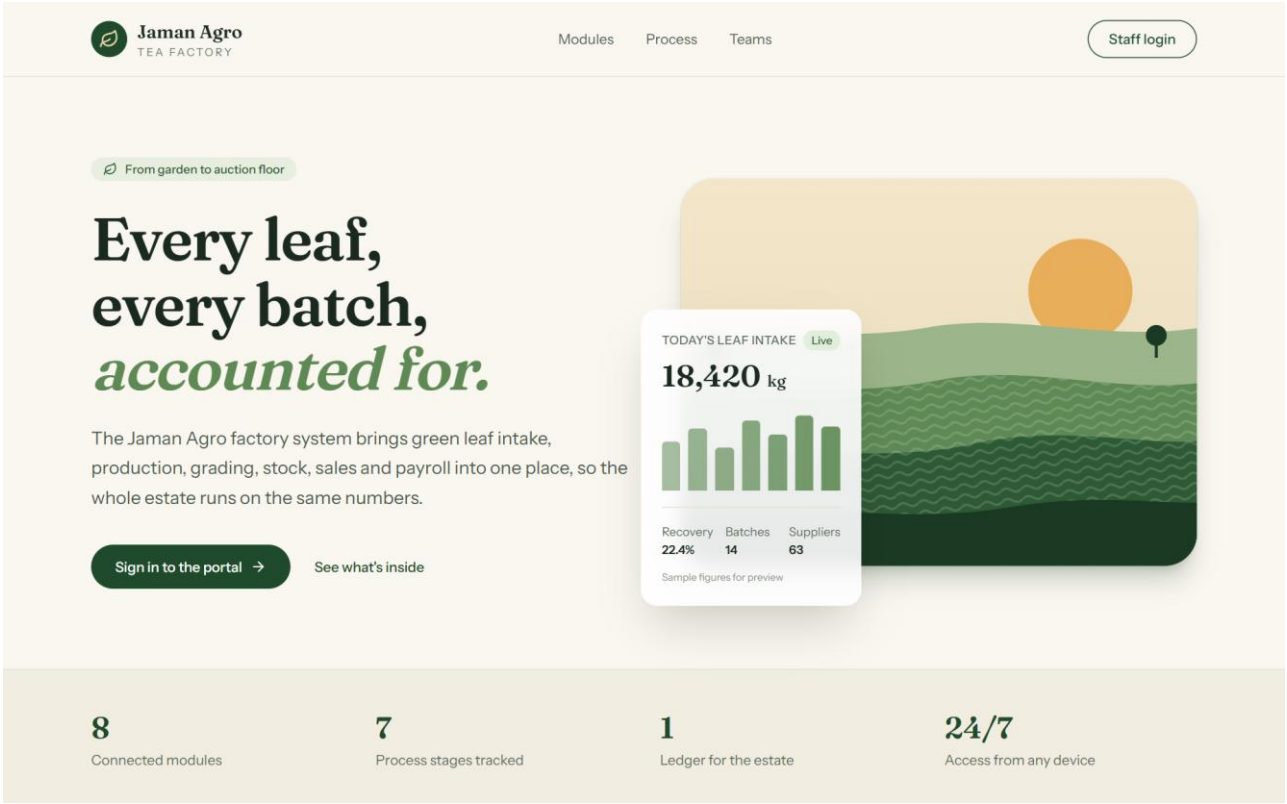

Figure 1. *The Jaman Agro front page. Click Staff login to sign in.*

2.2 Signing in

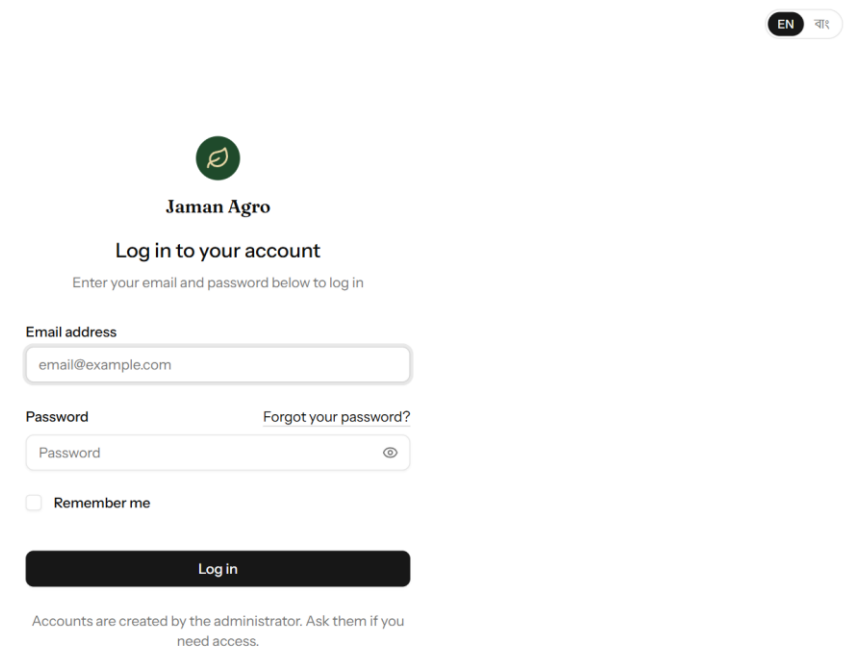

Figure 2. *The sign-in page.*

1. Type your **email address** in **Email address**.
2. Type your password in **Password**. Click the eye symbol to see what you typed.
3. Tick **Remember me** only on your own computer. It keeps you signed in after the browser closes.
4. Click **Log in**. You arrive at the dashboard.

Field	What it means	Required?
Email address	The email address your account was created with.	Yes
Password	Your password. It is case-sensitive.	Yes
Remember me	Stay signed in on this device.	No

> **Note:** Accounts are made only by the administrator. There is no sign-up page. If you need an account, ask the administrator.
>
> If you forget your password, ask the administrator to set a new one for you (chapter 17.1). Then change it yourself (chapter 18.2).
>
> If your account has been switched off, signing in will fail with the message that no active account matches. Speak to the administrator.

To sign out, click your name at the bottom of the left-hand menu and choose **Log out**. Always sign out on a shared computer.

2.3 The screen layout

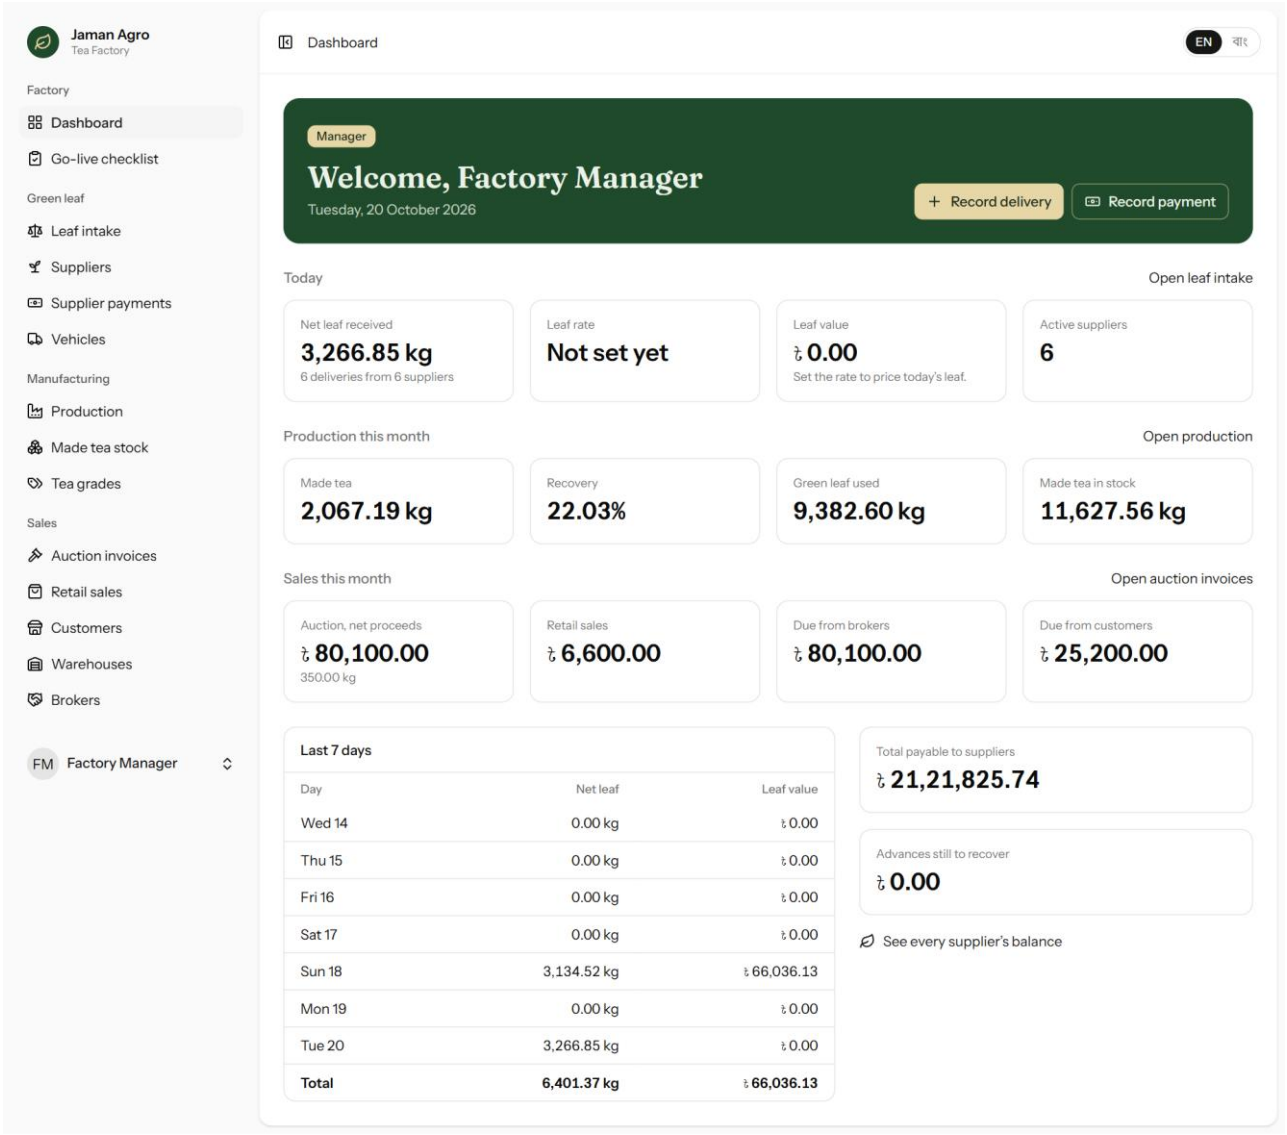

Figure 3. *The main screen: menu on the left, page title and language switch at the top, the page in the middle.*

- **Left-hand menu** — every part of the system, grouped under **Factory**, **Green leaf**, **Manufacturing**, **Sales**, **Workforce**, **Accounts** and, for the administrator, **Administration**. The page you are on is highlighted. The owner does not see the menu items for things they cannot change (such as **Tea grades**).
- **Your name** at the bottom of the menu — click it for **Settings** and **Log out**.
- **Top bar** — the button at the far left hides or shows the menu. Next to it is the **page trail** (for example **Retail sales** > **New sale**); click an earlier part to go back.
- **Language switch** (EN | বাং) at the top right — see 2.4.
- **Messages** — after you save, a short green message appears at the bottom of the screen confirming what happened. If something is wrong, a red message appears under the field that needs attention.

2.4 Bangla or English

Click **EN** or **বাং** at the top right of any page, including the sign-in page, to switch language. Your choice is remembered for your account, so the system opens in your language next time. In Bangla, numbers and dates are also shown with Bangla digits.

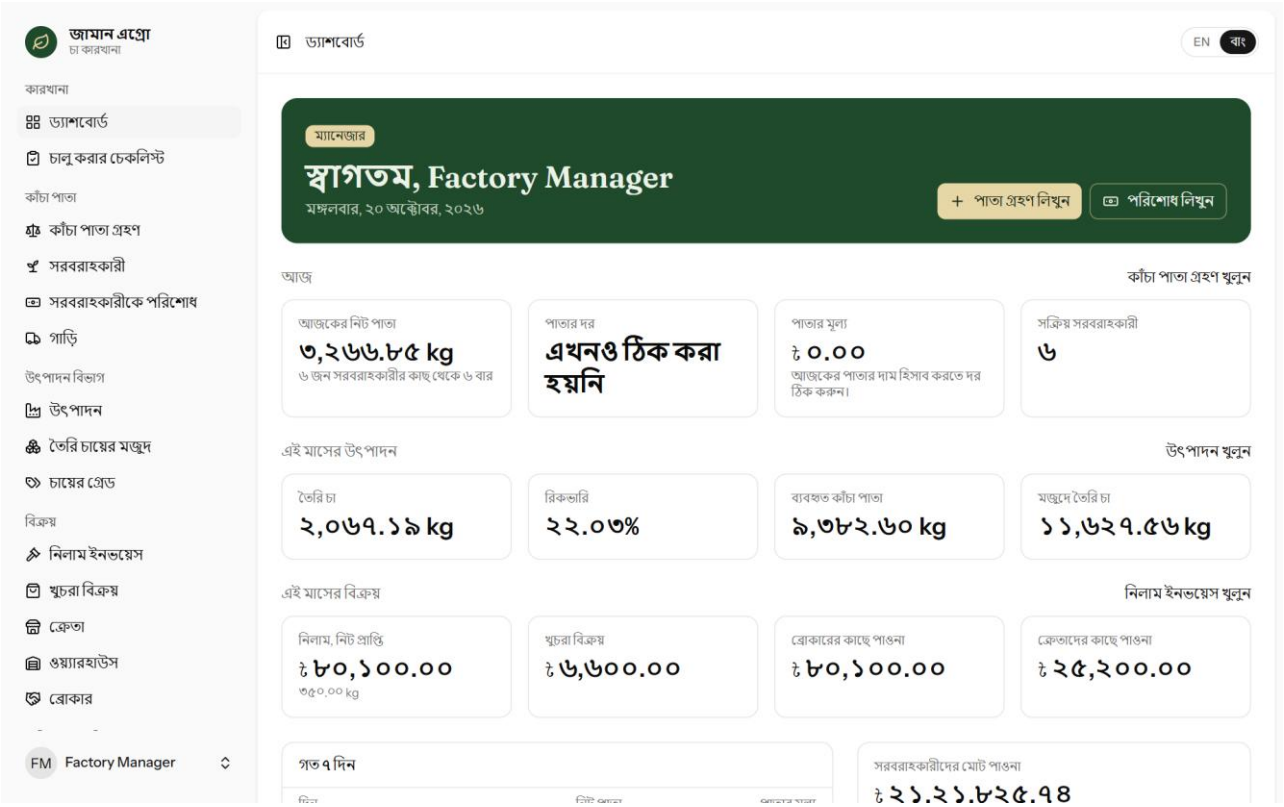

Figure 4. *The same dashboard in Bangla.*

> **Note:** The administrator chooses each person’s starting language when creating the account. The manager and owner accounts start in Bangla. Anyone can change their own language at any time with the switch.

2.5 Using the system on a phone

Every page works on a phone. The menu folds away behind the button at the top left; tap it to open the menu. Wide tables can be scrolled sideways with a finger. The leaf intake page is designed so the gate clerk can record deliveries from a phone.

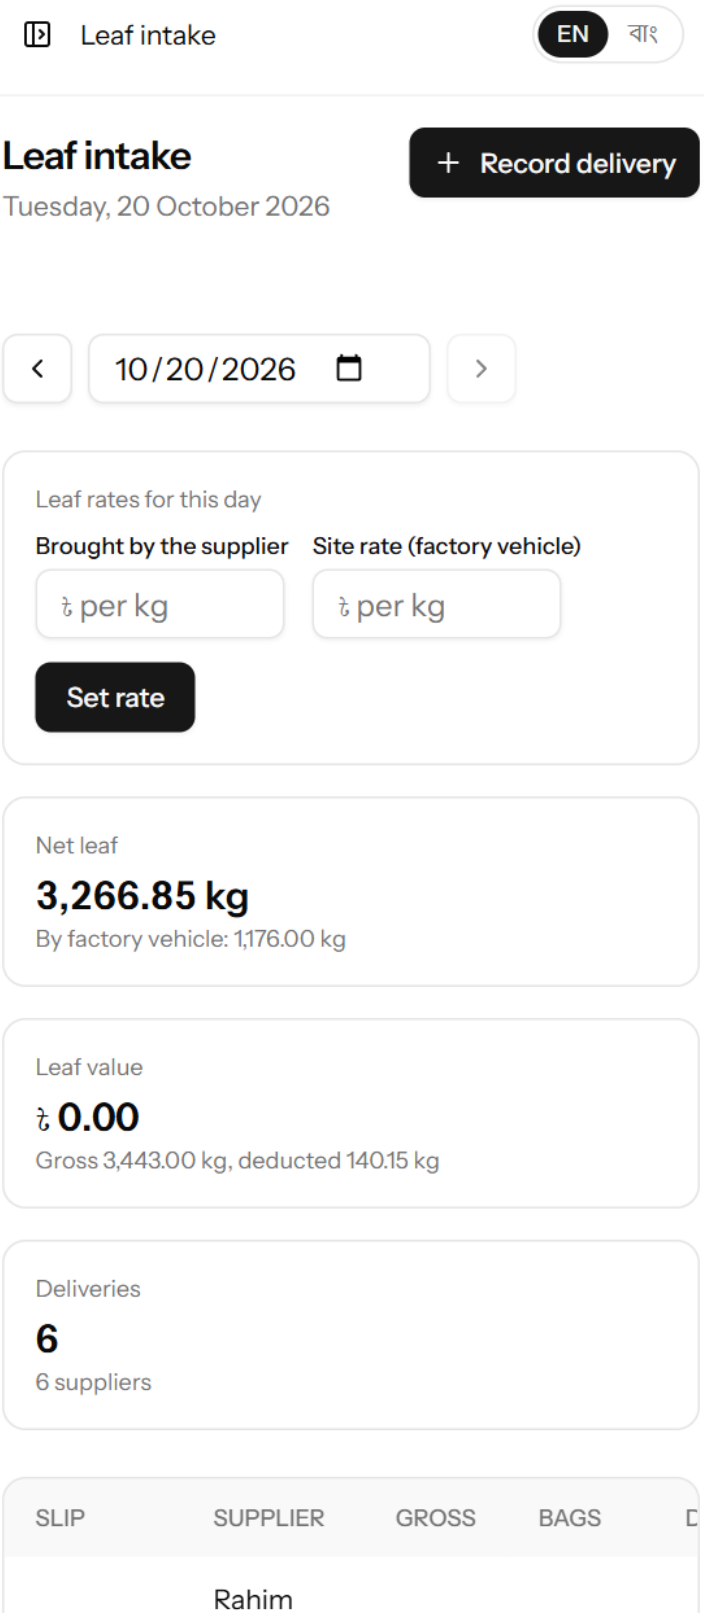

Figure 5. *The leaf intake page on a phone.*

2.6 Things that work the same everywhere

You see	What it does
A date box with a calendar symbol	Type a date or click the symbol to pick one. Dates in the future are not allowed for anything that has already happened.
‹ and › beside a date or month	Go to the previous or next day or month.
Search / **Show** with filters	Narrow a list. Fill in the filters, then click the button.
Numbers at the bottom of a long list (‹ 1 2 3 ›)	The list has more pages. Click a number to see that page.
Pencil symbol	Edit (correct) that line.
Red bin symbol	Delete that line. The system always asks you to confirm first.
Locked with a padlock	The entry was recorded more than three days ago and can no longer be changed. Click it to ask the administrator to unlock it (chapter 16).
Waiting with an hourglass	An unlock has been asked for and the administrator has not answered yet.
A small orange **edited** mark	The entry was changed after it was first saved. Point at the mark to see when.
Printer symbol or **Print**	Print the page. Only the page content is printed, not the menu. In the print window you can also choose “Save as PDF”.
Cancel	Leave the form without saving anything.

3. The dashboard

The dashboard is the first page after signing in (**Factory → Dashboard**). It shows how the factory is doing today and this month. Every figure is up to date the moment you open it.

Section	What it shows
Welcome band	Your name, your role and today's date. The manager and administrator also see quick buttons: **Record delivery** and **Record payment**.
Today	**Net leaf received** (and from how many deliveries and suppliers), today's **Leaf rate**, the **Leaf value** of today's leaf, and the number of **Active suppliers**. If the rate is not set yet, the leaf value stays at ৳0 and a reminder appears.
Production this month	**Made tea**, **Recovery**, **Green leaf used**, and the **Made tea in stock** right now.
Sales this month	**Auction, net proceeds** (with kg sold), **Retail sales**, money **Due from brokers** (sold at auction but not yet paid) and money **Due from customers**.
Last 7 days	Net leaf and leaf value for each of the last seven days, with a total. Click a day to open that day's leaf intake.
Supplier balances	**Total payable to suppliers** and **Advances still to recover**. Click **See every supplier's balance** for the full list.

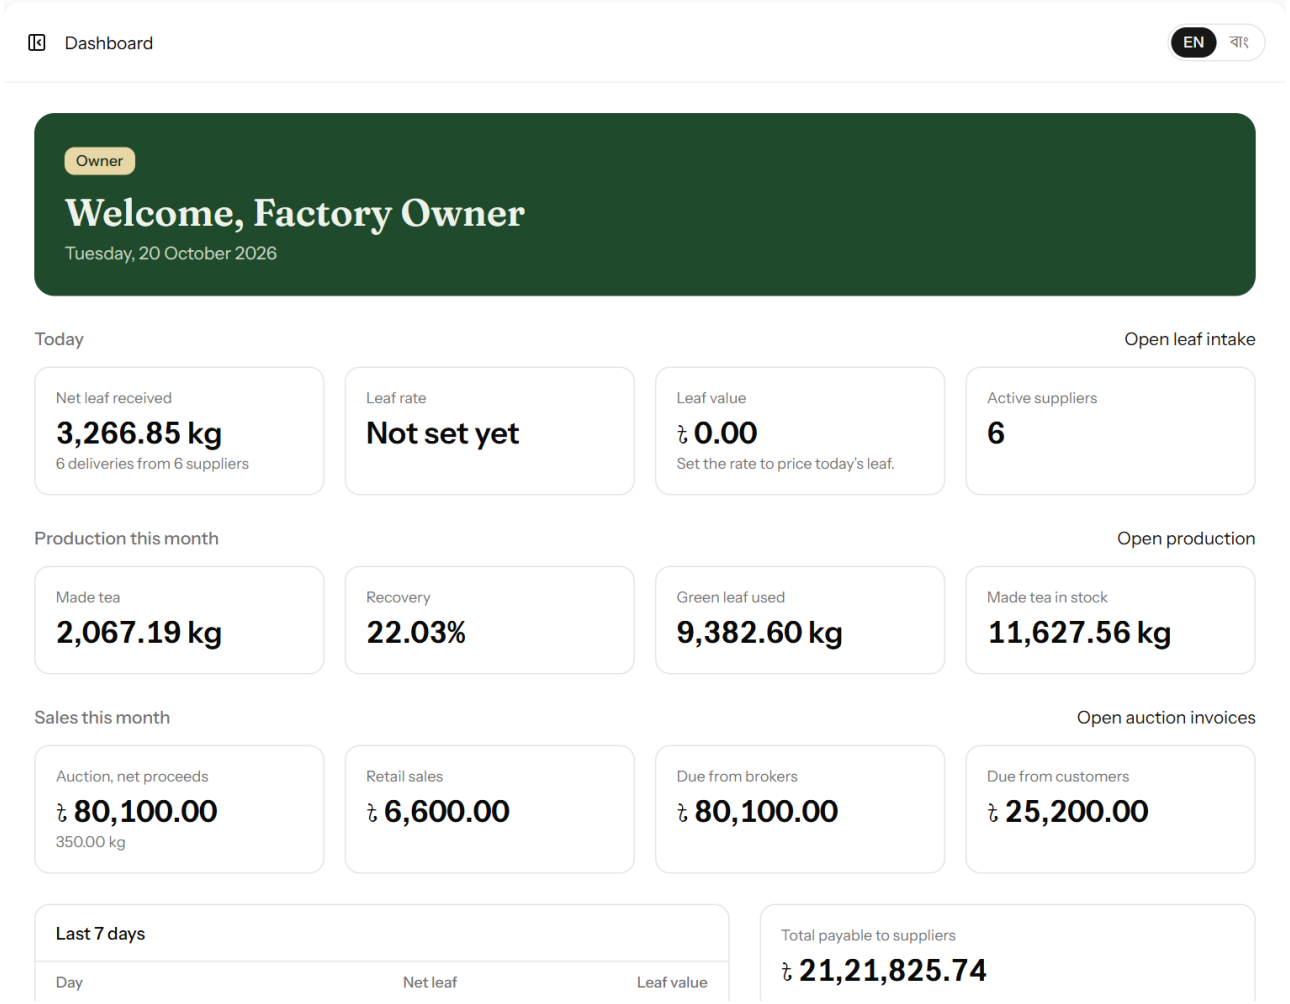

Figure 6. *The owner's dashboard: the same figures, without the buttons for entering work.*

4. The daily, weekly and monthly routine

This chapter is a checklist for the factory manager. Each line points to the chapter that explains it.

4.1 Before the first day: the go-live checklist

Before the factory starts using the system for real, a few lists and opening figures must be entered once. Open **Factory** → **Go-live checklist** (manager and administrator). Each line shows how many have been entered so far and gets a green tick when something is there; click a line to go to that page.

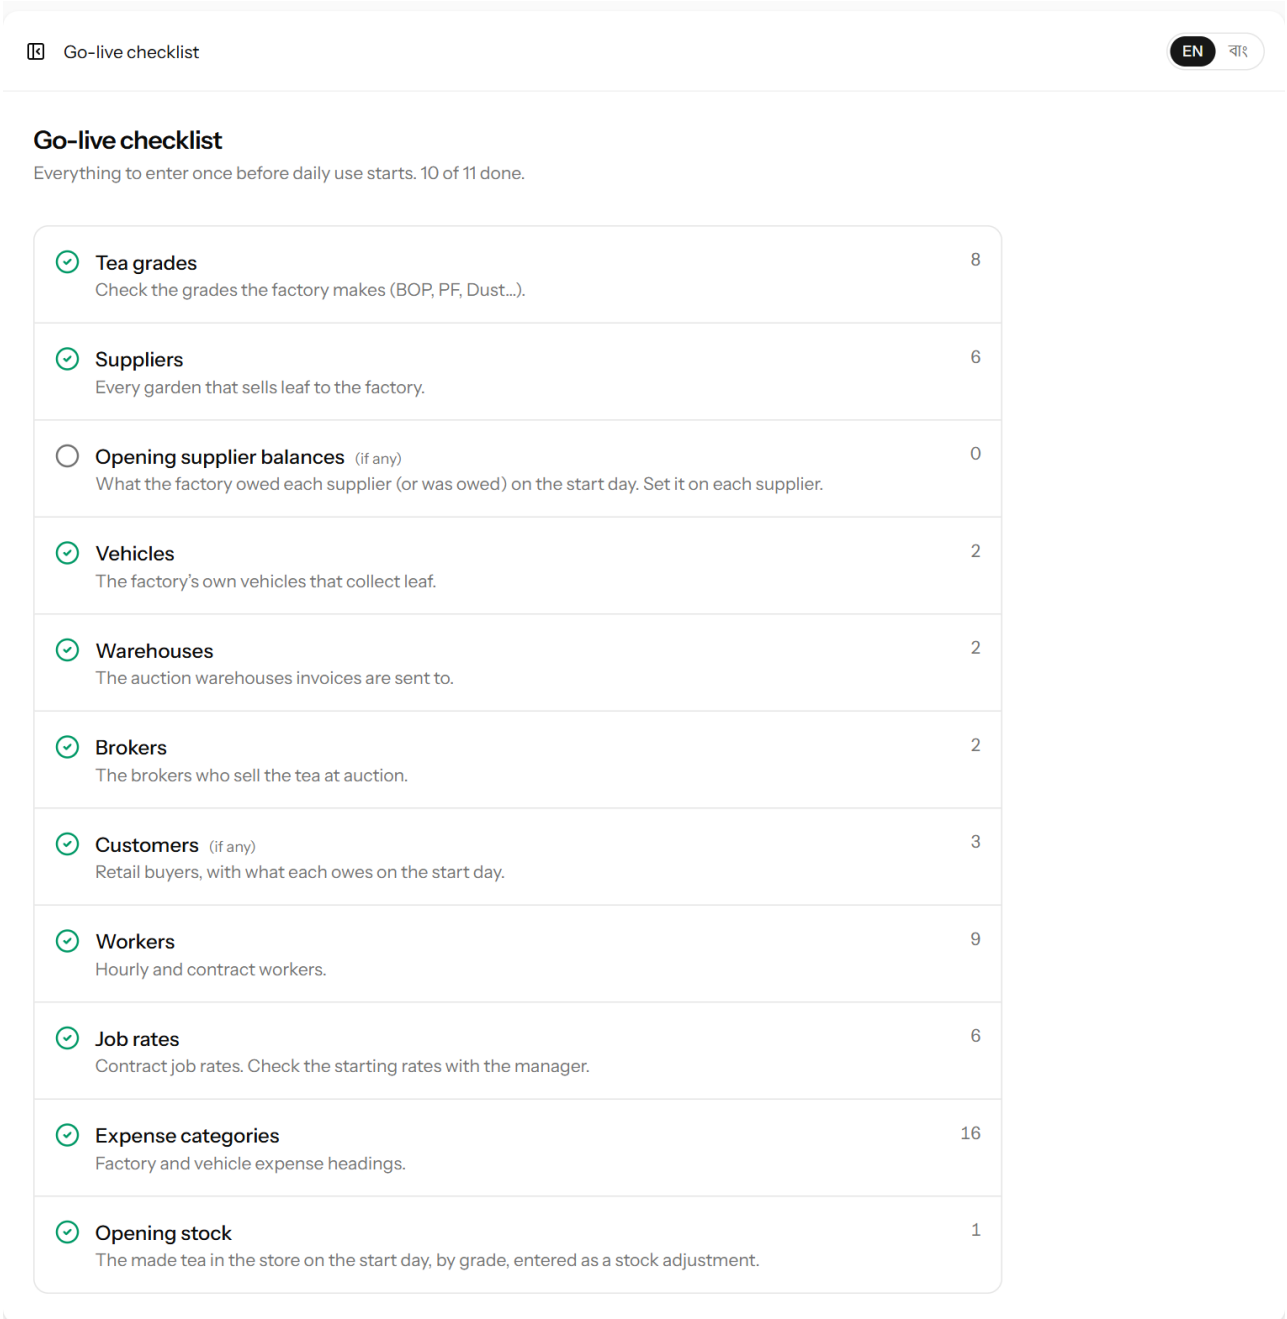

Figure 7. *The go-live checklist.*

Step	What to enter	Chapter
Tea grades	Check the grades the factory makes.	9.3

Step	What to enter	Chapter
Suppliers and opening balances	Every garden, with what the factory owed it (or was owed) on the start day.	5.2
Vehicles	The factory's own vehicles that collect leaf.	6.6
Warehouses and brokers	Where auction tea goes and who sells it.	10.6, 10.7
Customers	Retail buyers, with what each owed on the start day.	11.1
Workers and job rates	Hourly and contract workers; the rate of every contract job.	13.1, 13.4
Expense categories	Factory and vehicle expense headings.	12.3
Opening stock	The made tea in the store on the start day, by grade, as a stock adjustment (**Add to stock**).	9.2

> **Important:** The starting job rates (for example ৳0.45 per kg for leaf unloading and ৳8 per bag for bagging) were taken from the planning meeting. Check every rate with the manager before the first pay day and correct it in **Job rates**.

4.2 Every day

When	Task	Chapter
As leaf arrives	Weigh each delivery, note whether the supplier brought it or a factory vehicle collected it, measure moisture, record it in **Leaf intake** and give the supplier the printed slip.	6.3, 6.4
When the day's rates are decided	Set the rate and the site rate on the **Leaf intake** page. Every delivery of the day is priced at once.	6.2
After manufacture	Record the production batch: green leaf used and made tea by grade.	8.2
During and after the shift	Fill in the attendance sheet for the hourly workers and record the contract work done.	13.2, 13.3
Next morning	Look over yesterday's entries and correct any mistakes while they are still open (three days).	16
When money changes hands	Record supplier payments and advances, money received from customers, and expenses.	7, 11.6, 12
When tea is sold	Pack auction invoices, or write retail sale memos.	10, 11
End of day	Open the dashboard and check that today's figures look right.	3

4.3 Every week

- Pay the workers on **Sunday** (for Thursday–Saturday) and on **Thursday** (for Sunday–Wednesday) from the **Wages** page (13.5).

- Update auction invoices as they move: dispatch dates, sale and lot numbers, auction results, broker payments (10.4).
- Print supplier statements for suppliers being paid this week (5.4).
- Check **Made tea stock** against what is physically in the store. Correct any difference with **Adjust stock**, giving the reason (9.2).

4.4 Every month

- Make sure all of the month’s expenses are recorded, including each vehicle’s fuel, driver and repairs (12).
- Print the **Cash book** for the month and compare it with the cash in hand and the bank statement (14).
- Open **Reports** with the owner and review sales, costs, landed leaf cost, recovery and cost per kg (15).
- Send customers their statements and follow up on money due (11.5).

5. Suppliers

Suppliers are the garden owners the factory buys green leaf from. Each supplier has an account that shows what the factory owes them. Open **Green leaf → Suppliers**.

5.1 The supplier list

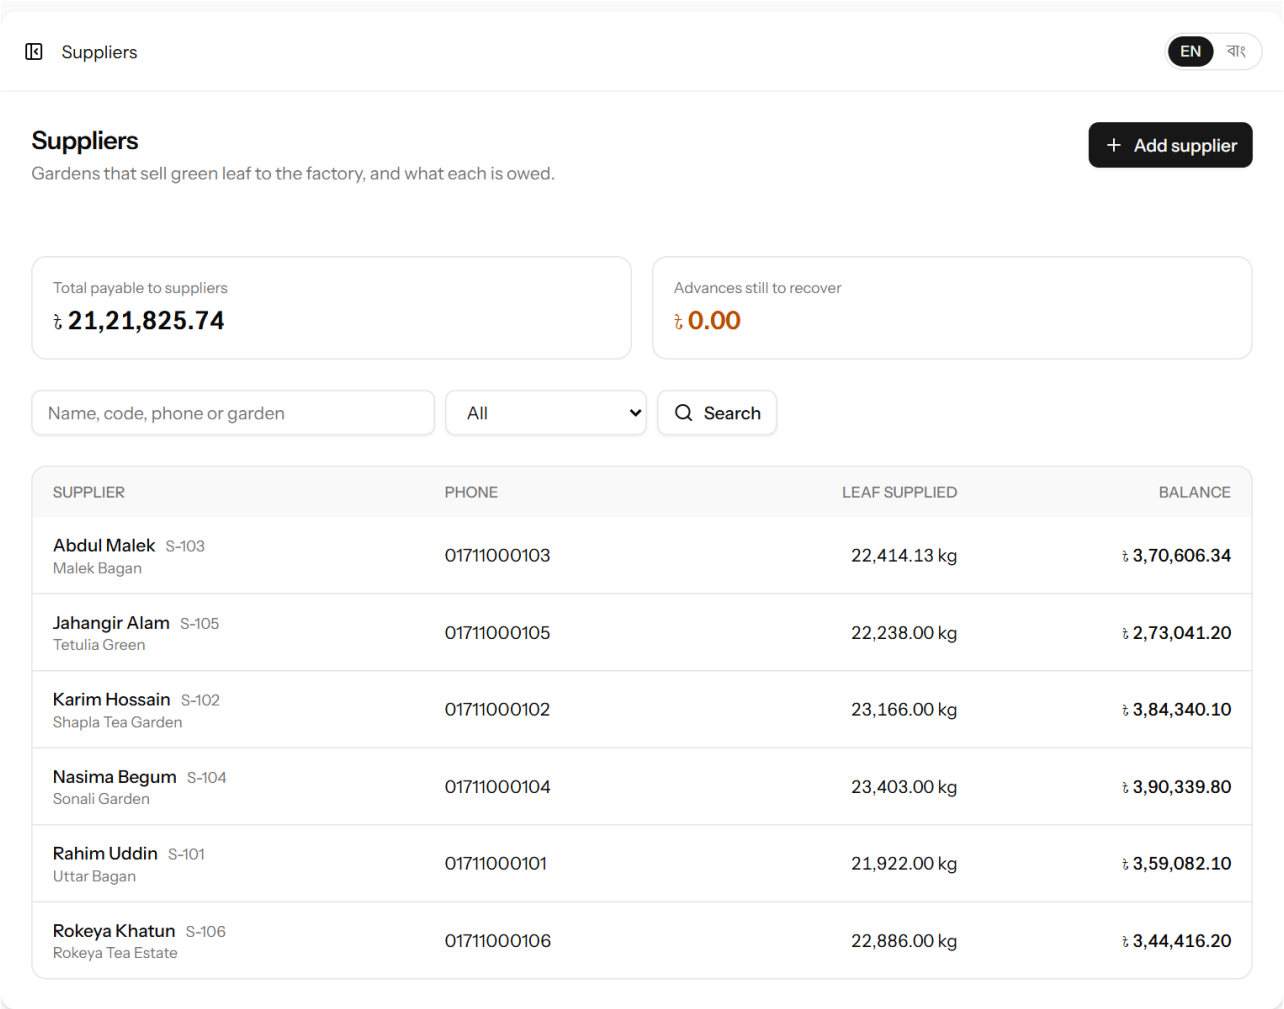

Figure 8. *The supplier list with each supplier's leaf supplied and balance.*

Part of the page	Meaning
Total payable to suppliers	The sum of what the factory owes all suppliers whose balance is positive.
Advances still to recover	The sum of advances given to suppliers that their leaf has not yet covered.
Search box and status filter	Find a supplier by name, code, phone or garden; show only active or inactive suppliers.
Leaf supplied	Total net kg of leaf this supplier has ever delivered.
Balance	What the factory owes the supplier now. If the amount is followed by "(advance)" in orange, the supplier has been paid more than their leaf is worth so far and the extra will be recovered from future leaf.

Click a supplier's name to open their statement (5.4).

5.2 Adding a supplier

1. Click **Add supplier** at the top right.
2. Fill in the form (see the table below).
3. Click **Add supplier**. The supplier's statement opens.

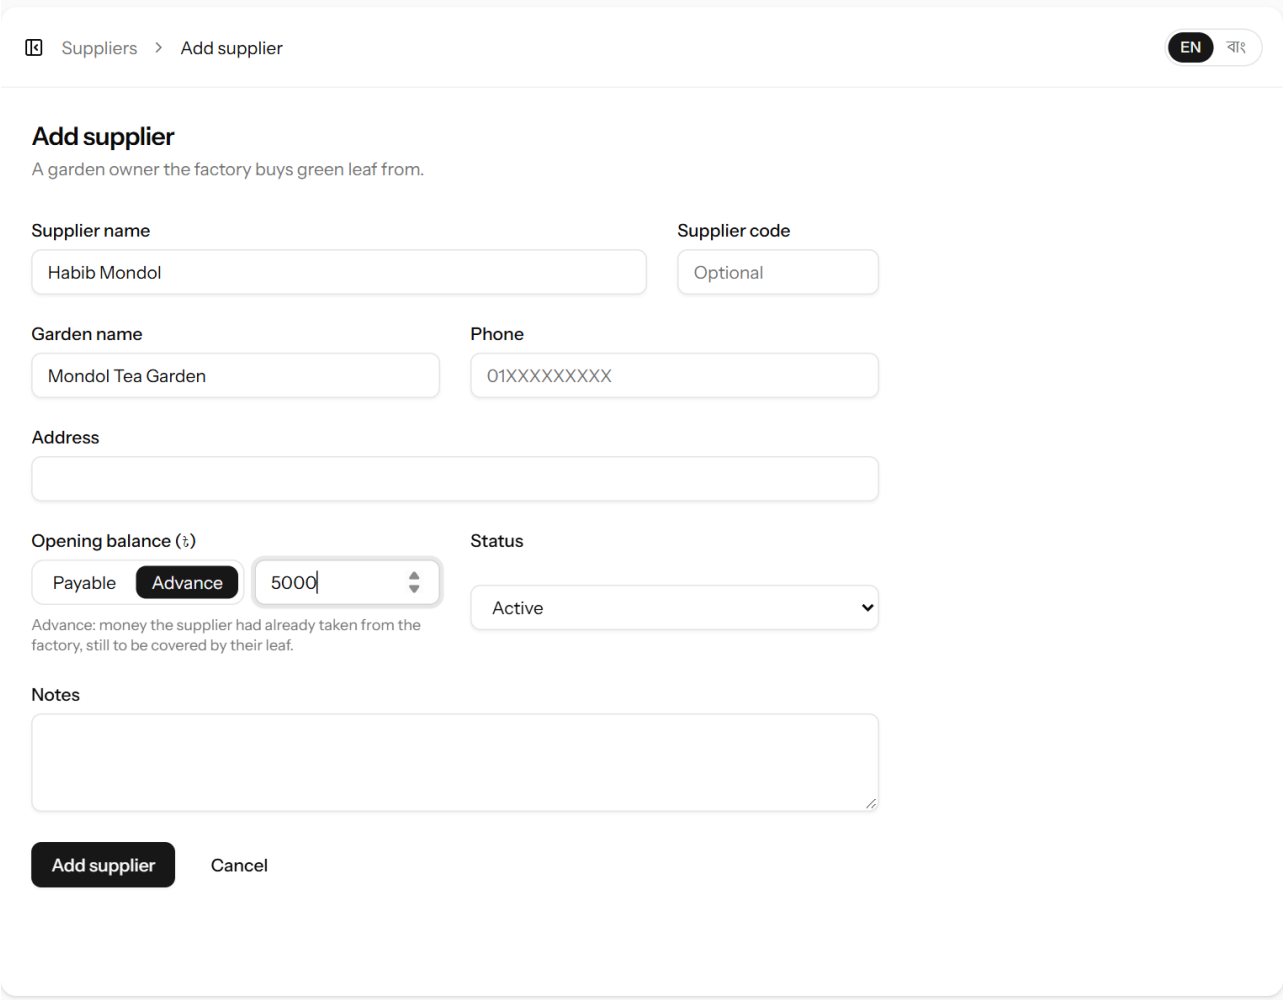

Figure 9. *The form for adding a supplier.*

Field	What it means	Required?
Supplier name	The person's or garden's name as it should appear on slips and statements.	Yes
Supplier code	Your own short code (for example S-101), if the factory uses supplier numbers. No two suppliers can have the same code.	No
Garden name	The name of the garden the leaf comes from.	No
Phone	Mobile number, for example 01711000101.	No
Address	Village, union, upazila.	No

Field	What it means	Required?
Opening balance (৳)	Only for suppliers who already had money owing when you started using the system. First click which kind it is: **Payable** — the factory owed the supplier this amount; **Advance** — the supplier had already taken this amount from the factory (for example an old advance), to be covered by their leaf. Then type the amount as a plain number, for example 5000. Never type a minus sign.	No
Status	**Active** suppliers can be chosen on new deliveries and payments. Choose **Inactive** for a supplier who has stopped supplying.	Yes
Notes	Anything else worth remembering.	No

5.3 Changing or switching off a supplier

Open the supplier’s statement and click **Edit**. Change what is needed and click **Save changes**. A supplier cannot be deleted once they have any deliveries or payments — this protects the history. Set them to **Inactive** instead: they disappear from the choices on new entries but their history stays.

5.4 The supplier statement

The statement is the supplier’s bill: every delivery and payment in a period, with a running balance. Click a supplier’s name in the list to open it.

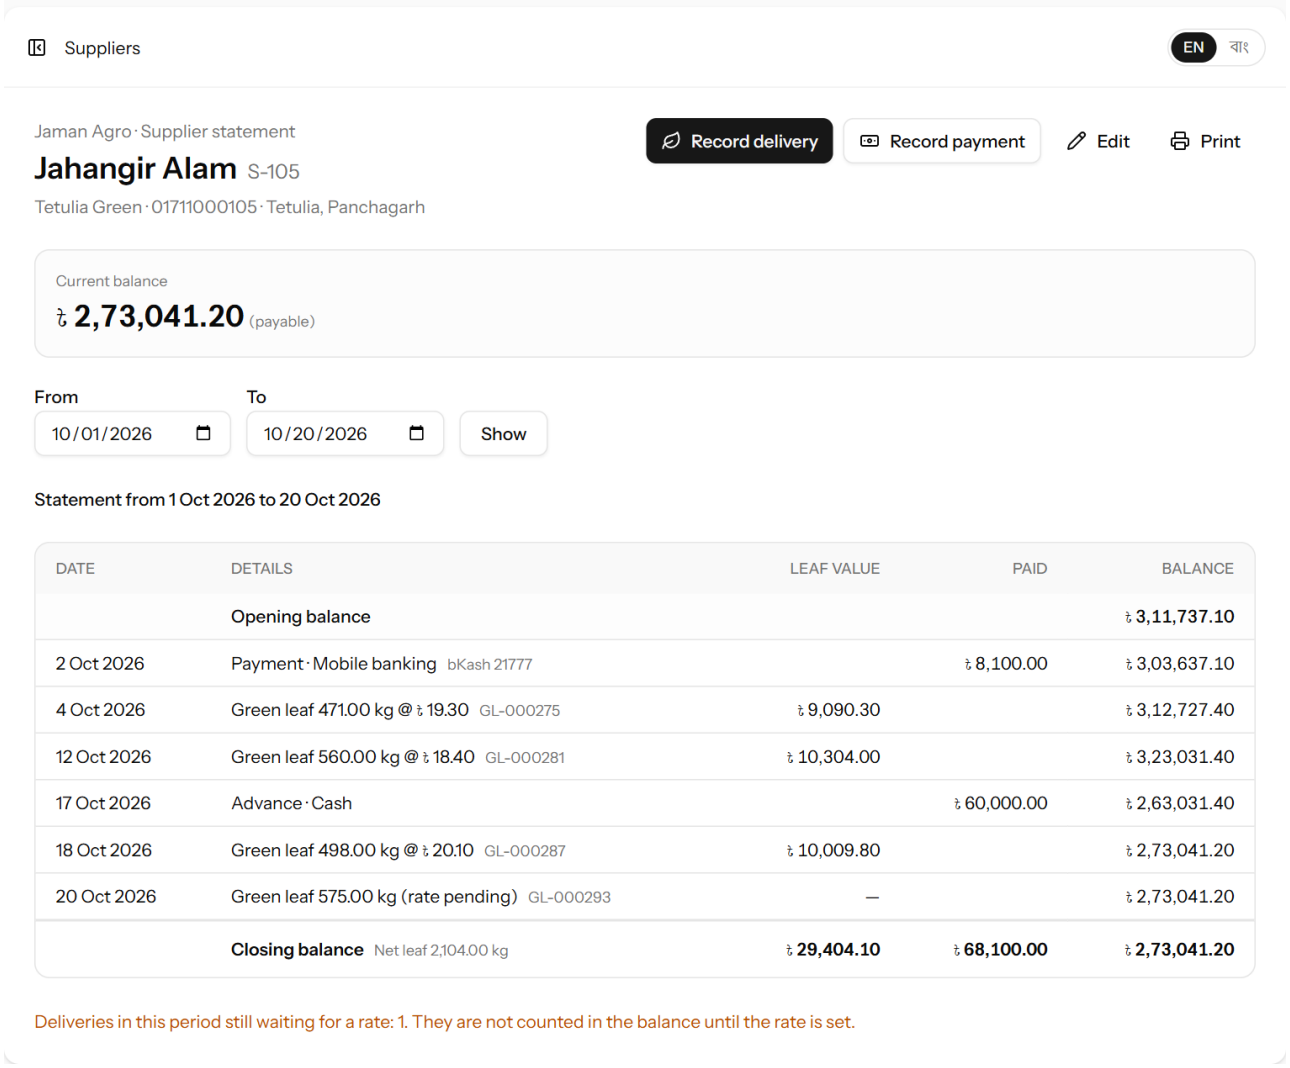

Figure 10. *A supplier statement: deliveries, a payment and an advance, with the running balance. The last delivery is still waiting for the day's rate.*

Part	Meaning
Buttons at the top	**Record delivery** and **Record payment** open those forms with this supplier already chosen. **Edit** changes the supplier's details. **Print** prints the statement.
Current balance	What the factory owes the supplier today, across all time.
From / **To**	The period of the statement. It starts as the 1st of this month until today. Change the dates and click **Show**.
Opening balance	The balance at the start of the period: the supplier's opening balance plus all leaf before the period, minus all payments before the period.
Each line	A delivery ("Green leaf 375.55 kg @ ৳24.50", with the slip number) or a payment/advance (with how it was paid). **Leaf value** adds to the balance, **Paid** takes away from it.
Balance column	The running balance after each line.
Closing balance	The balance at the end of the period, with the total net leaf, total leaf value and total paid in the period.

Note: Deliveries whose day has no rate yet are listed with “(rate pending)” and are not added to the balance until the rate is set. A message under the statement tells you how many such deliveries there are.

Worked example: A supplier starts the month owing nothing. On the 3rd they take a ৳60,000 advance: the balance shows ৳60,000 (advance).

On the 4th they deliver 600 kg net at ৳20: ৳12,000 is added, so the balance becomes ৳48,000 (advance).

Once their deliveries pass ৳60,000 in value, the balance turns positive and the factory owes them the difference.

6. Green leaf intake

This is the busiest screen in the system. Every delivery of green leaf is recorded here as it is weighed at the gate. Open **Green leaf** → **Leaf intake**.

6.1 The day page

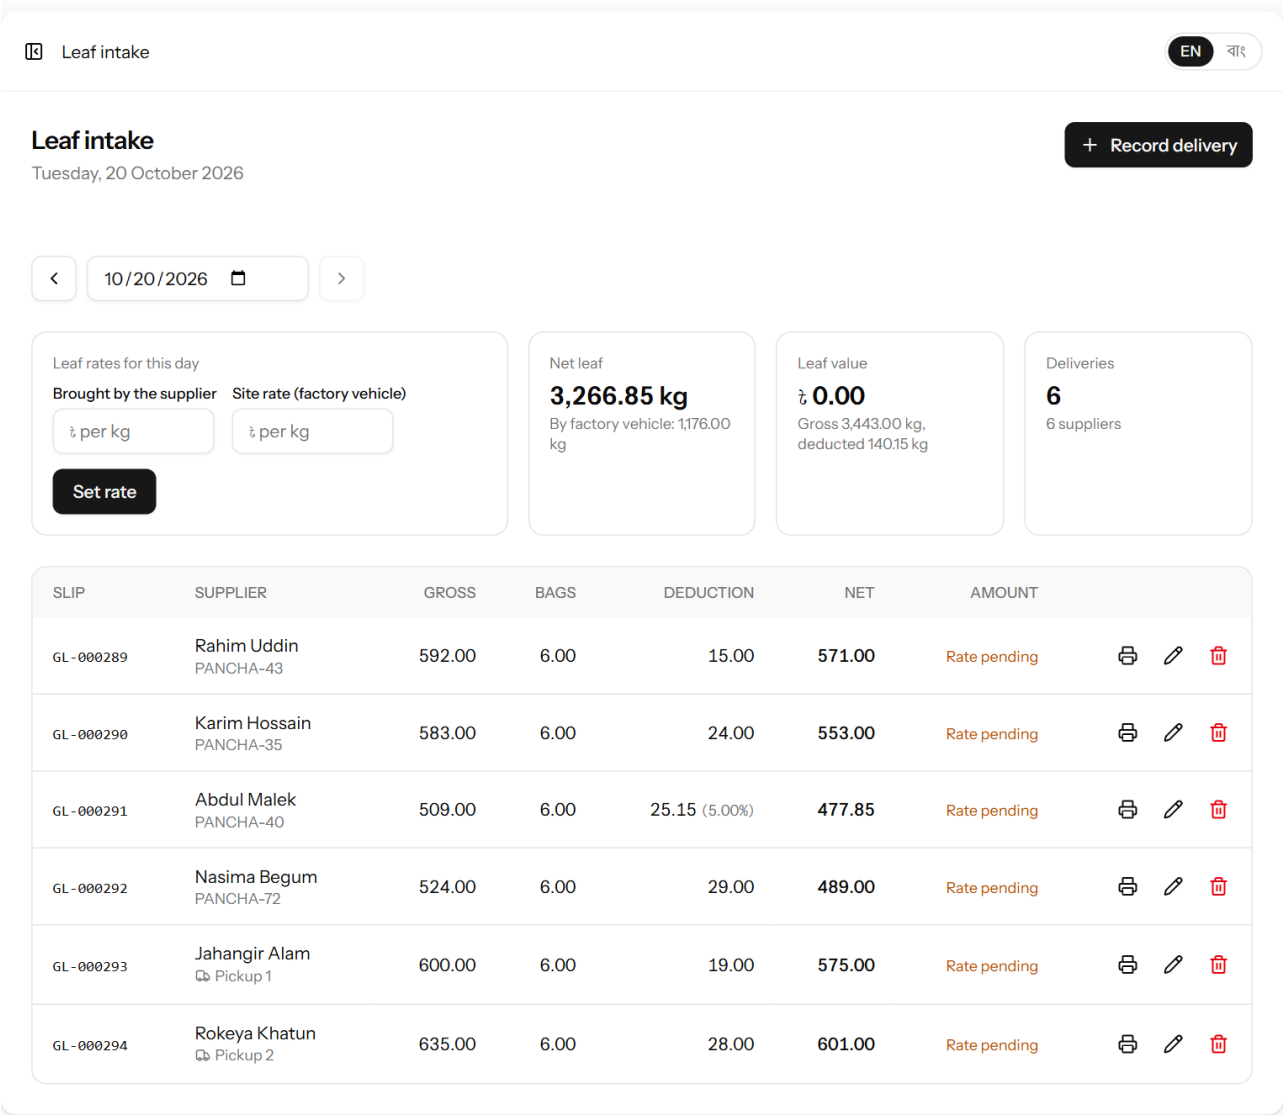

Figure 11. *Today's leaf intake. The rate is not set yet, so the deliveries show "Rate pending".*

Part	Meaning
Date and ‹ ›	The page always shows one day. It opens on today. Use the arrows or the date box to look at another day; **Today** brings you back.
Leaf rates for this day	The two prices per kg for this day: the rate for leaf the supplier brought, and the site rate for leaf a factory vehicle collected. Set or change them here (6.2).
Net leaf	Total net kg received this day, and how much of it came in factory vehicles.
Leaf value	Total money owed for this day's leaf, with the gross weight and how much was deducted. Deliveries without a rate are not counted until it is set.

Part	Meaning
Deliveries	How many deliveries came in and from how many suppliers.
The table	One line per delivery: slip number (with an **edited** mark if it was changed); supplier with the vehicle number — or, for factory-collected leaf, a truck symbol and the vehicle's name; gross; bags; deduction in kg (and the percentage, if it was entered as one); net and amount. On the right: print the slip, and edit or delete — or **Locked** once the delivery is more than three days old (chapter 16).

6.2 Setting the day's leaf rates

Each day has two rates. The **rate** is paid for leaf the supplier brings to the factory. The **site rate** is paid for leaf the factory collects from the garden with its own vehicle — it is lower, because the factory carries the transport cost. Both are set once per day, before, during or after the deliveries — whenever the factory decides them.

1. On the **Leaf intake** page, make sure the right day is showing.
2. In the **Leaf rates for this day** box, type the rate under **Brought by the supplier**, for example 21.50, and the site rate under **Site rate (factory vehicle)**, for example 20.00. The site rate can be left empty on a day when no leaf was collected.
3. Click **Set rate**. Every delivery of that day is priced at once — each at the rate that fits how it arrived — and a message says how many were priced.

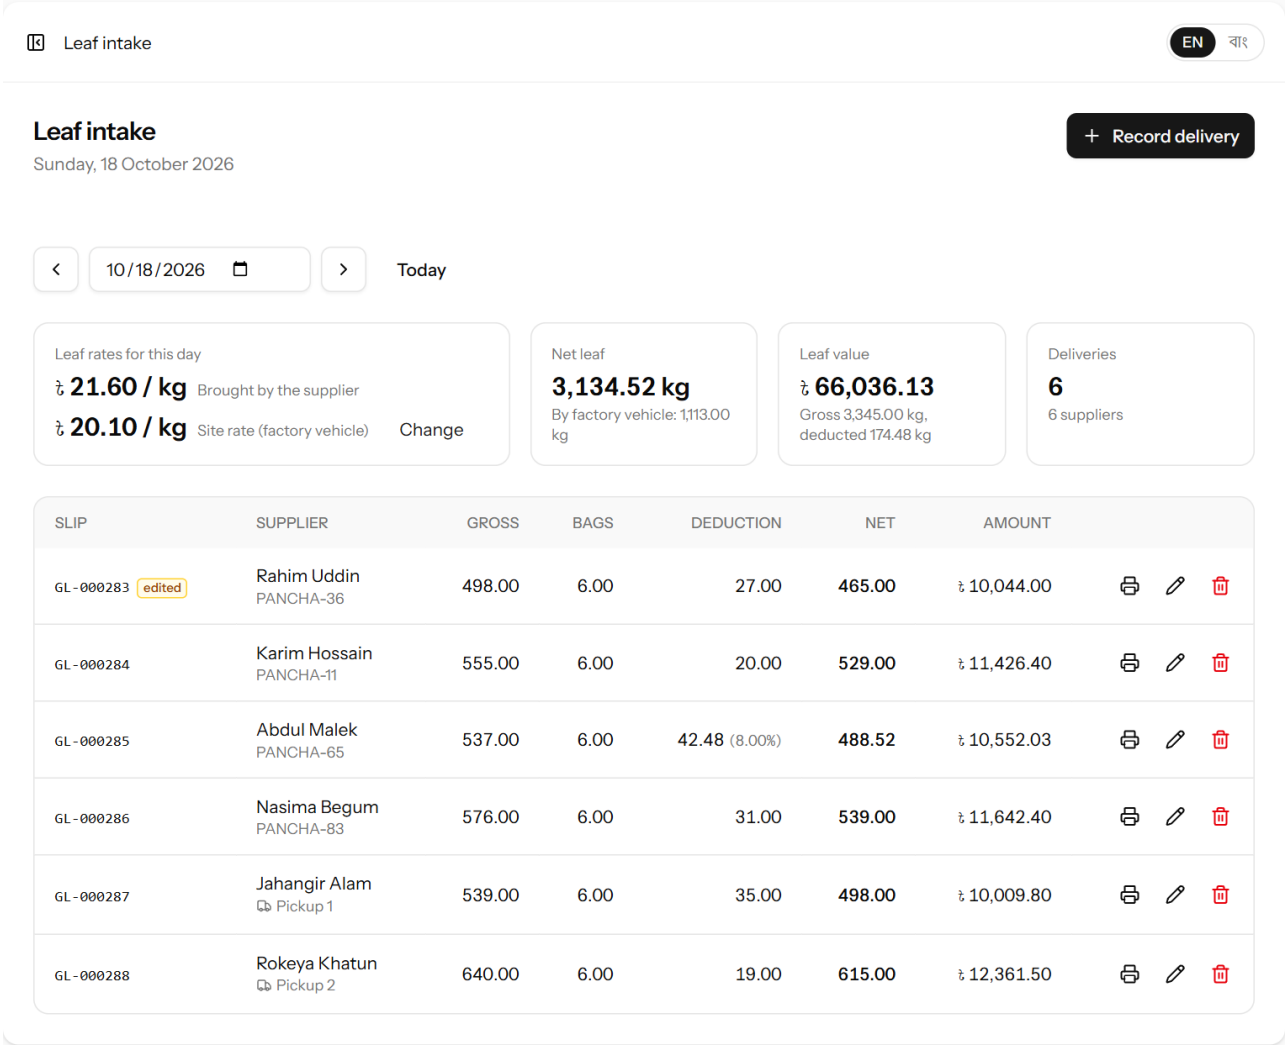

Figure 12. *A day with both rates set: every delivery has an amount. The last two gardens' leaf came in the factory's pickups.*

To change the rates, click **Change** next to them, type the new figures and click **Set rate**.

> **Important:** Changing a day's rates re-prices **every** delivery of that day, including deliveries already shown on printed slips and statements. Only change a rate if the original one was wrong, and tell the suppliers concerned.
>
> Leaf collected by a factory vehicle stays "Rate pending" until the site rate is set — it is never priced at the supplier rate by mistake. The site rate cannot be higher than the rate.
>
> Rates cannot be set for a future day. Like other entries, a day's rates lock three days after they were set (chapter 16).

6.3 Recording a delivery

1. Click **Record delivery** (on the dashboard or the leaf intake page).
2. Check the **Date** — it starts as today.
3. Choose the supplier. With many suppliers, type part of the name, code or garden in the **Find…** box first to shorten the list.
4. Under **How did the leaf arrive?** click **Brought by the supplier** or **Collected by a factory vehicle**. For a factory vehicle, choose which one in **Factory vehicle**; otherwise the supplier's **Vehicle no.** can be typed in, if useful.

5. Enter **Gross weight (kg)** from the scale and **Bags / basket weight (kg)**. Then enter the **Moisture deduction**: in **kg** (the default), or click **%** beside the box to enter a percentage instead.
6. Check the **Calculation** box on the right: it shows the deduction, the net weight, the rate that applies (rate or site rate) and, if that rate is set, the amount, as you type.
7. Click **Save & print slip** to save and open the slip for printing — or **Save & add another** to save and start the next delivery for the same day straight away.

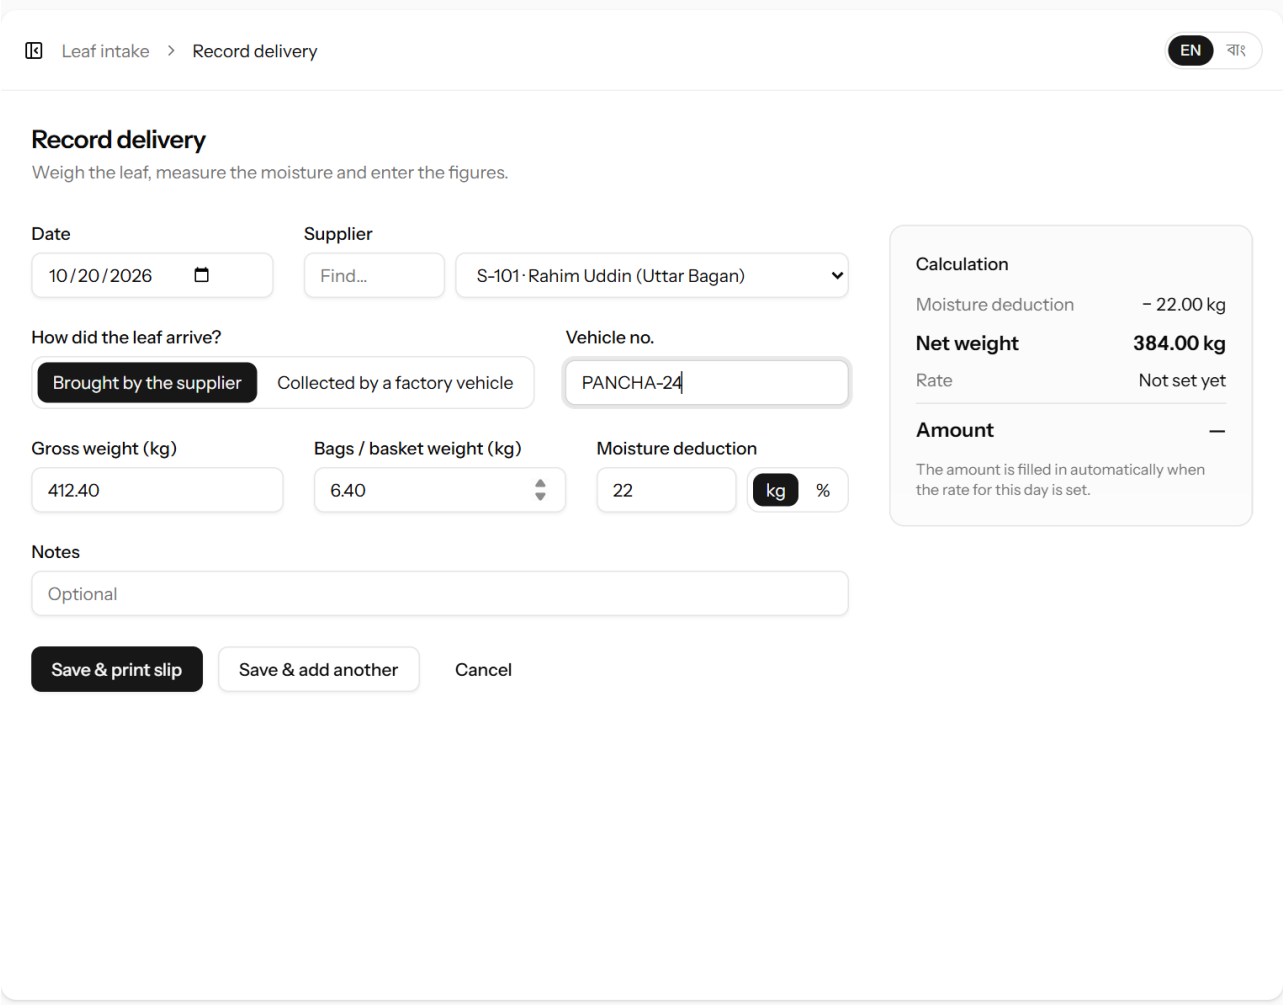

Figure 13. *Recording a delivery the supplier brought, with 22 kg deducted for moisture. The Calculation box works out the net weight as you type.*

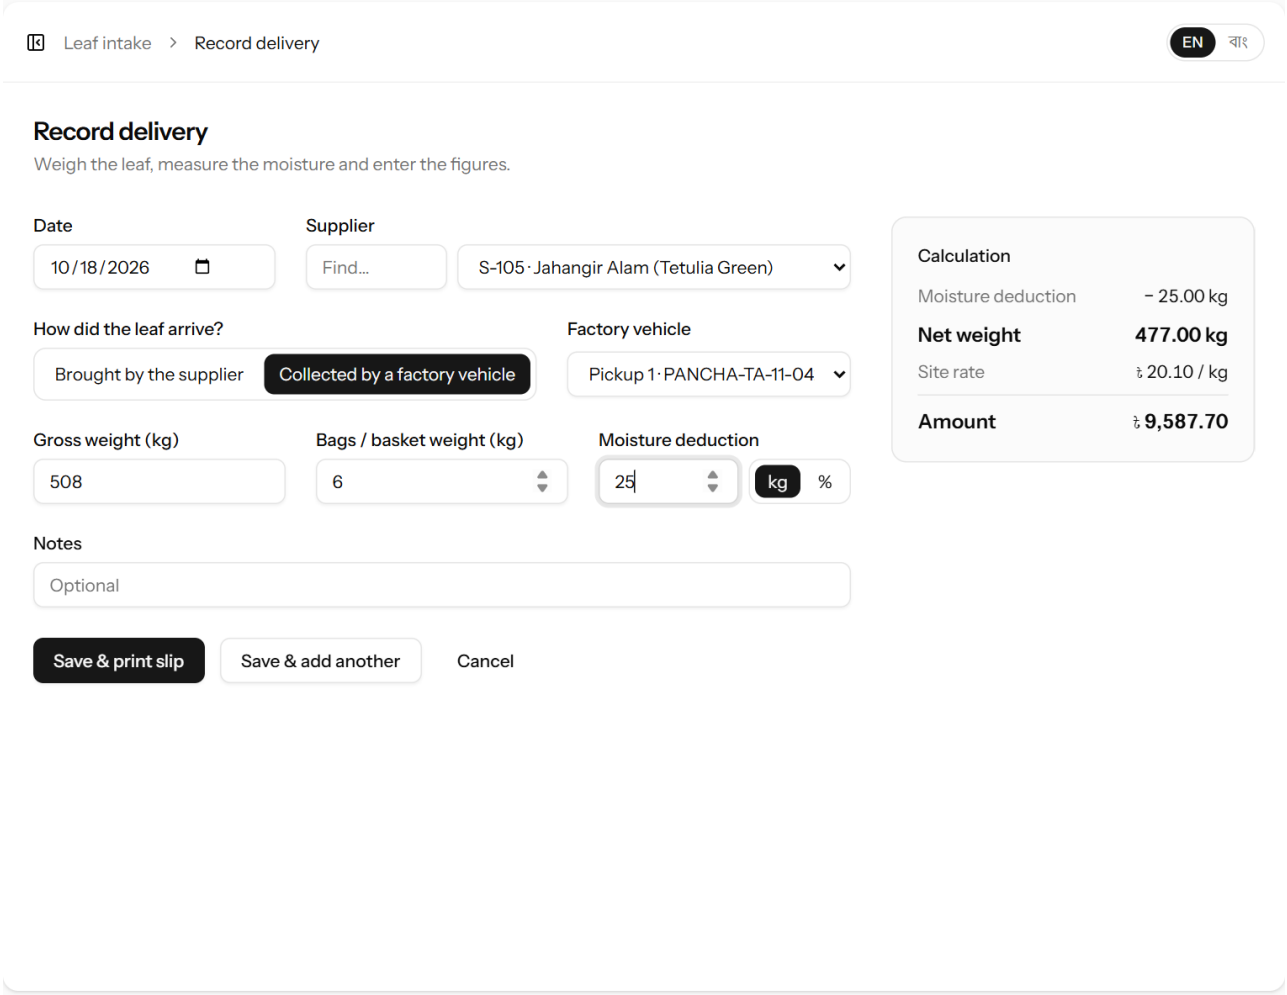

Figure 14. *A delivery collected by the factory's Pickup 1. It is priced at the day's site rate.*

Field	What it means	Required?
Date	The day the leaf was received. Cannot be in the future.	Yes
Supplier	Whose leaf it is. Only active suppliers are listed.	Yes
How did the leaf arrive?	**Brought by the supplier** — priced at the day's rate. **Collected by a factory vehicle** — priced at the day's site rate.	Yes
Factory vehicle	Which of the factory's vehicles collected the leaf. Shown only for factory-collected leaf. The list comes from **Vehicles** (6.6).	For a factory vehicle
Gross weight (kg)	The full weight on the scale, including bags or baskets. Must be more than 0.	Yes
Bags / basket weight (kg)	The weight of the empty bags or baskets. Must be less than the gross weight. Leave 0 if the scale was zeroed with the bags.	No
Moisture deduction	What is taken off for moisture. With **kg** selected (the default): the kilograms deducted, which must be less than the leaf weight. With **%** selected: the percentage of the leaf weight, between 0 and 100. Enter 0 if nothing is deducted.	Yes

Field	What it means	Required?
Vehicle no.	For leaf the supplier brought: the number plate or van number, if useful.	No
Notes	Anything unusual about this delivery (for example poor leaf quality).	No

> **Worked example:** Gross weight 412.40 kg, bags 6.40 kg, 22 kg deducted for moisture.
> Leaf weight = 412.40 − 6.40 = **406.00 kg**. Net weight = 406.00 − 22 = **384.00 kg**.
> Brought by the supplier, rate ৳24.50: amount = 384.00 × 24.50 = **৳9,408.00**.
> Collected by a factory vehicle, site rate ৳23.00: amount = 384.00 × 23.00 = **৳8,832.00**.
> With the deduction as a percentage instead, 7.5% of 406.00 kg = 30.45 kg, so the net weight is 375.55 kg; at ৳24.50 that is ৳9,200.975, rounded to **৳9,200.98**.

> **Tip:** At a busy gate, use **Save & add another**. The form clears for the next delivery but keeps the date, how the leaf arrived and the kg/% choice, so the clerk can enter one delivery after another without leaving the form.

6.4 The weighing slip

After **Save & print slip**, the slip opens. Click **Print slip** to print it and give it to the supplier. You can print any slip again later with the printer symbol on the leaf intake page.

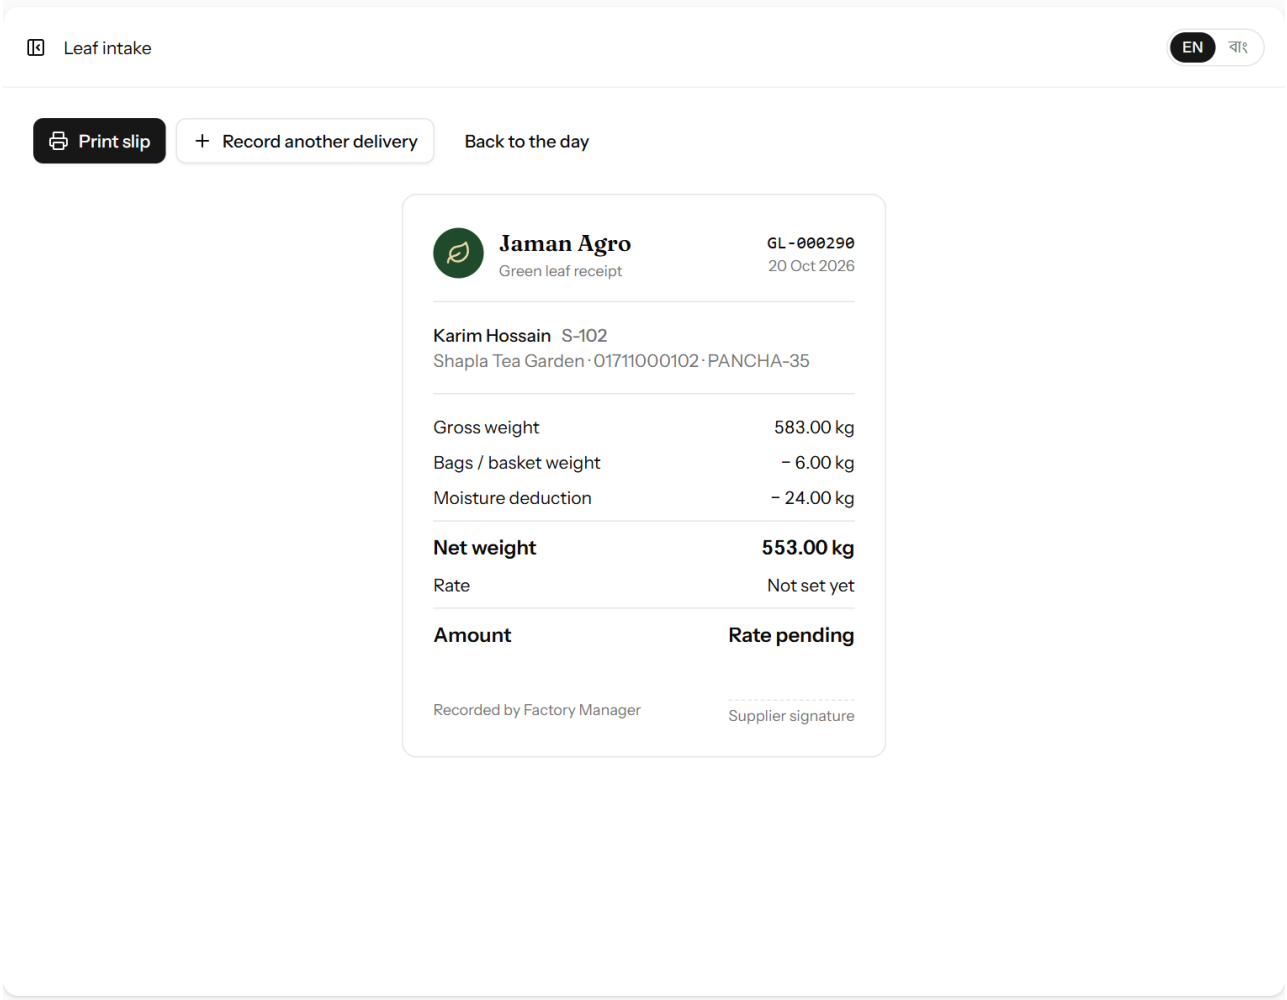

Figure 15. *The weighing slip, with a space for the supplier's signature.*

Each slip has a number such as **GL-000289** (GL = green leaf). The number never changes and appears on the supplier's statement, so a slip can always be matched to the account. For factory-collected leaf the slip names the vehicle.

6.5 Correcting or deleting a delivery

- To correct a mistake, click the pencil symbol on the delivery's line, fix the figures and click **Save changes**. If you change the date, the delivery takes the rate of its new day.
- To remove a delivery entered by mistake, click the red bin symbol and confirm. This cannot be undone, but it stays recorded in the activity log.
- Both are possible for **three days** after the delivery was recorded. After that the pencil and bin are replaced by **Locked**; chapter 16 explains how to have an old entry unlocked.

6.6 Factory vehicles

Open **Green leaf** → **Vehicles** (manager and administrator only) to keep the list of the factory's own vehicles that collect leaf from the gardens. Each vehicle can then be chosen on a delivery and on its running expenses — fuel, driver and repairs (chapter 12).

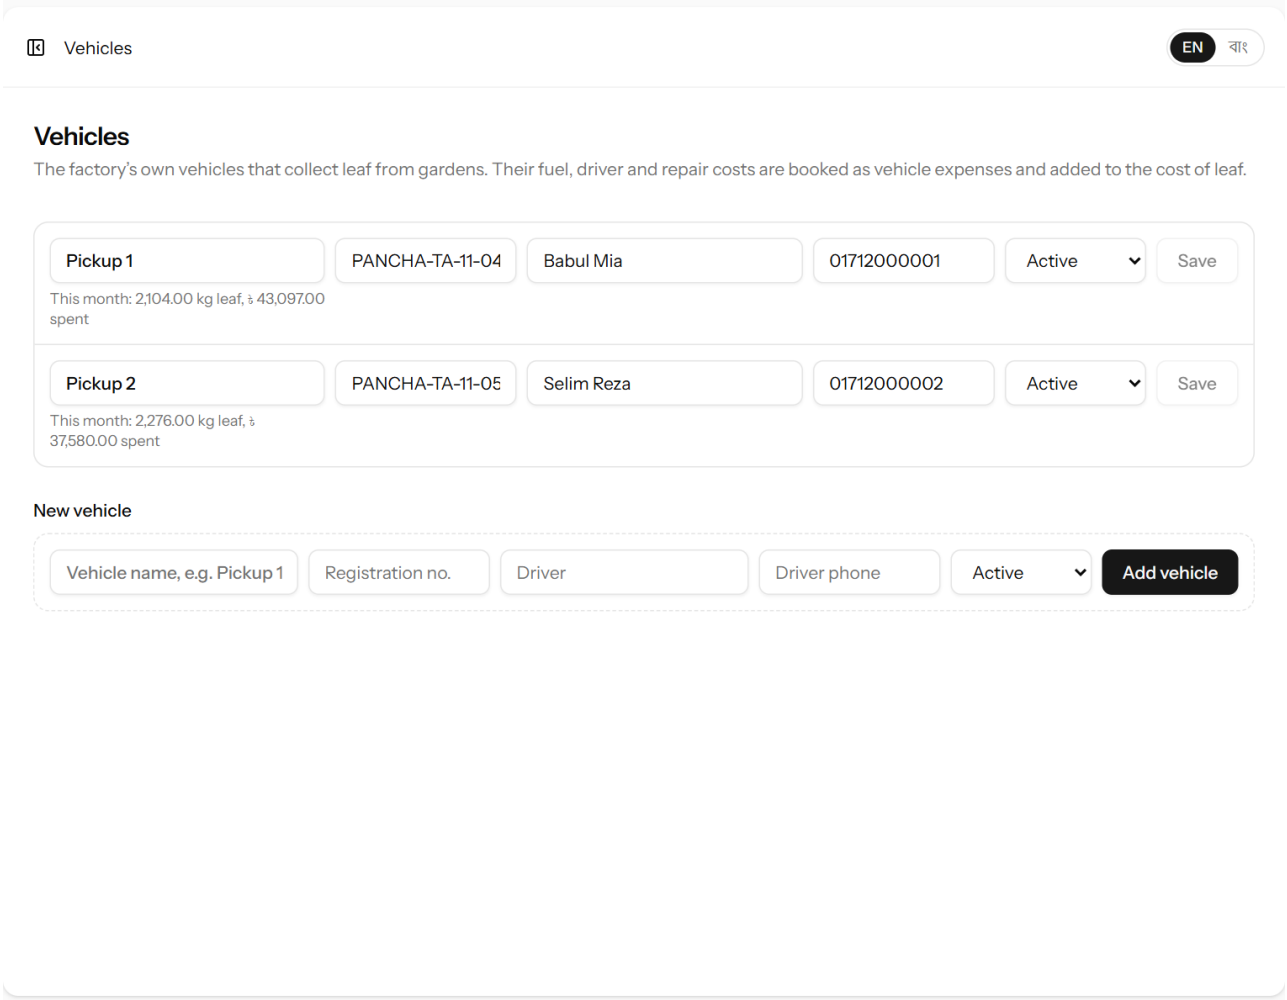

Figure 16. *The factory's vehicles, with this month's leaf collected and money spent on each.*

Field	What it means	Required?
Vehicle name	A short name everyone uses, for example "Pickup 1".	Yes
Registration no.	The number plate. No two vehicles can have the same one.	No
Driver / **Driver phone**	Who usually drives it.	No
Status	**Inactive** vehicles are not offered on new deliveries and expenses.	Yes

Edit a vehicle on its line and click **Save**; add one on the **New vehicle** line. Under each name the page shows the net leaf the vehicle brought in this month and the vehicle expenses booked to it. Together with the site rate, this shows whether collecting leaf pays: the reports add the vehicle costs to the leaf cost to give the **landed leaf cost per kg** (15.1).

7. Supplier payments and advances

Every taka paid to a supplier is recorded here — both payment for leaf already delivered and advances against future leaf. Open **Green leaf** → **Supplier payments**.

7.1 The payment list

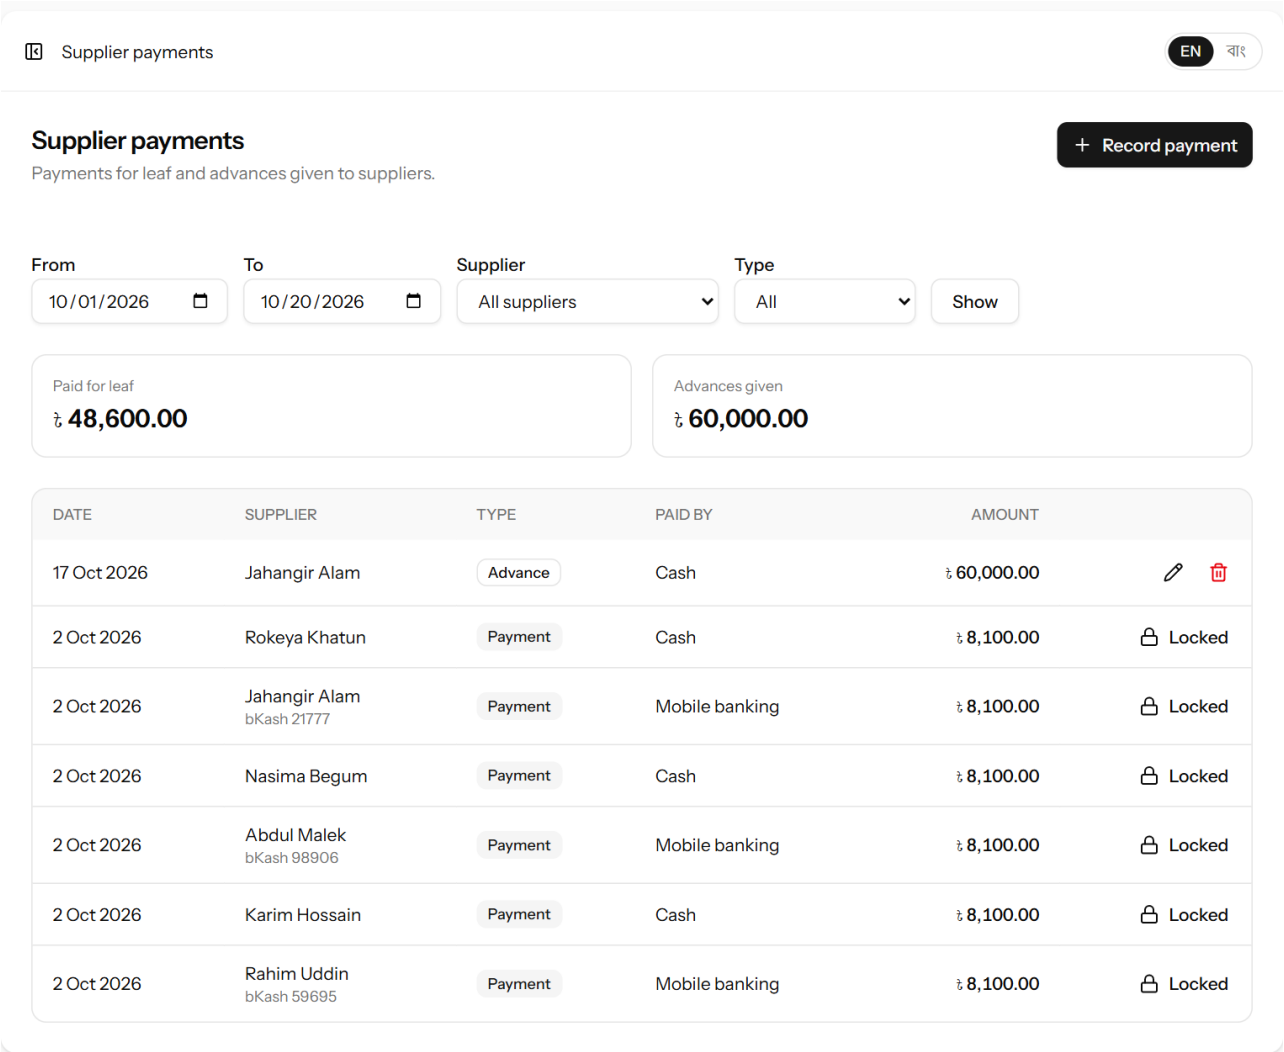

Figure 17. *Supplier payments for the month, with totals for payments and advances.*

Choose a period with **From** and **To**, and if you like a single supplier or a type (**Payment** or **Advance**), then click **Show**. The two boxes total what was paid for leaf and what was given as advances in the period. Click a supplier's name to open their statement.

7.2 Recording a payment or advance

1. Click **Record payment** — or, better, open the supplier's statement and click **Record payment** there, which fills in the supplier and shows their current balance.
2. Fill in the form and click **Record payment**. The supplier's statement opens with the payment on it.

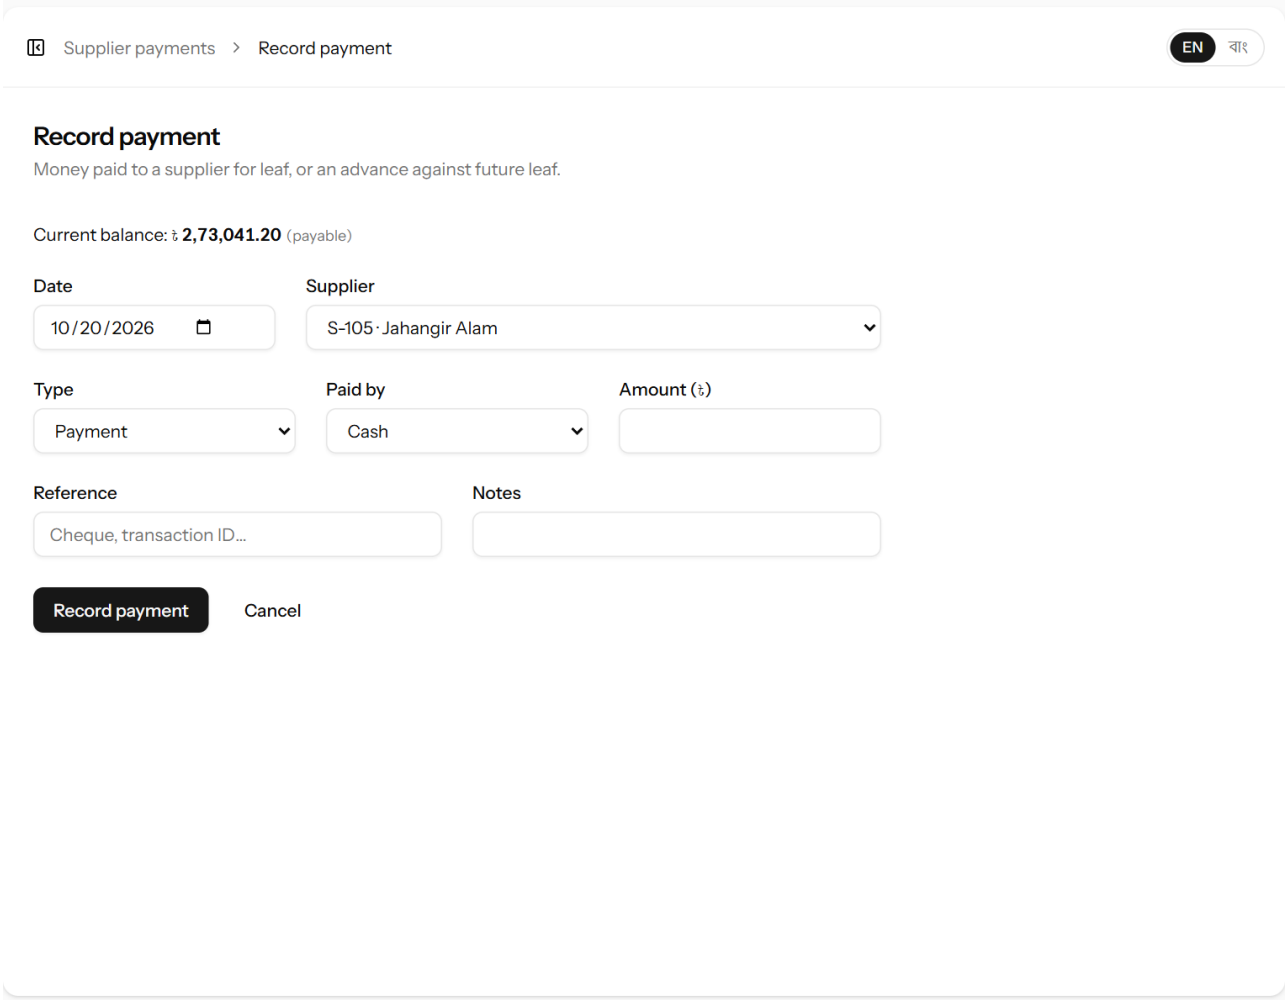

Figure 18. *Recording a payment. The supplier's current balance is shown at the top.*

Field	What it means	Required?
Date	The day the money was paid. Cannot be in the future.	Yes
Supplier	Who was paid.	Yes
Type	**Payment** — for leaf already delivered. **Advance** — money given ahead of leaf (for fertiliser, festivals and so on). Both reduce what the factory owes; the type is kept so reports can show advances separately.	Yes
Paid by	**Cash**, **Bank** or **Mobile banking** (bKash, Nagad, Rocket…). This decides where the payment appears in the cash book.	Yes
Amount (৳)	How much was paid. Must be more than 0.	Yes
Reference	Cheque number, bank or mobile banking transaction ID.	No
Notes	The purpose of the payment, for example "Advance for fertiliser".	No

> **Tip:** Before paying a supplier, print their statement for the period (5.4). It shows exactly how much is owed and is the supplier's record of the payment.

7.3 Correcting or deleting a payment

In the payment list, click the pencil symbol to correct a payment or the red bin symbol to delete one entered by mistake. The supplier’s balance updates at once. This is possible for three days after the payment was recorded (chapter 16).

8. Production

Each manufacture is recorded as a **production batch**: how much green leaf went in, and how much made tea of each grade came out. Open **Manufacturing** → **Production**.

8.1 The month page

Figure 19. *A month of production with made tea by grade and recovery.*

Part	Meaning
Month and ‹ ›	The page shows one month at a time.
Made tea	Total made tea this month and the number of batches.
Recovery	Made tea ÷ green leaf used × 100 for the whole month.
Green leaf used	The leaf that went into the batches.
Net leaf received	The leaf bought this month, for comparison. A large gap between received and used is worth checking.
The table	One line per batch, with a column for each grade, the total made tea and the recovery of that batch. The last line totals the month.

8.2 Recording a batch

1. Click **Record production**.
2. Check the **Date** and enter the **Green leaf used (kg)**. Under the box the system shows the net leaf received that day; click **Use this** to copy it.

3. Optionally enter the process readings: withering hours, fermentation minutes and dryer temperature.
4. Under **Made tea by grade (kg)**, enter the kg sorted into each grade. Leave grades that were not made empty.
5. Check the **Out-turn** box on the right — made tea and recovery are worked out as you type.
6. Click **Save batch**. The made tea is added to stock straight away.

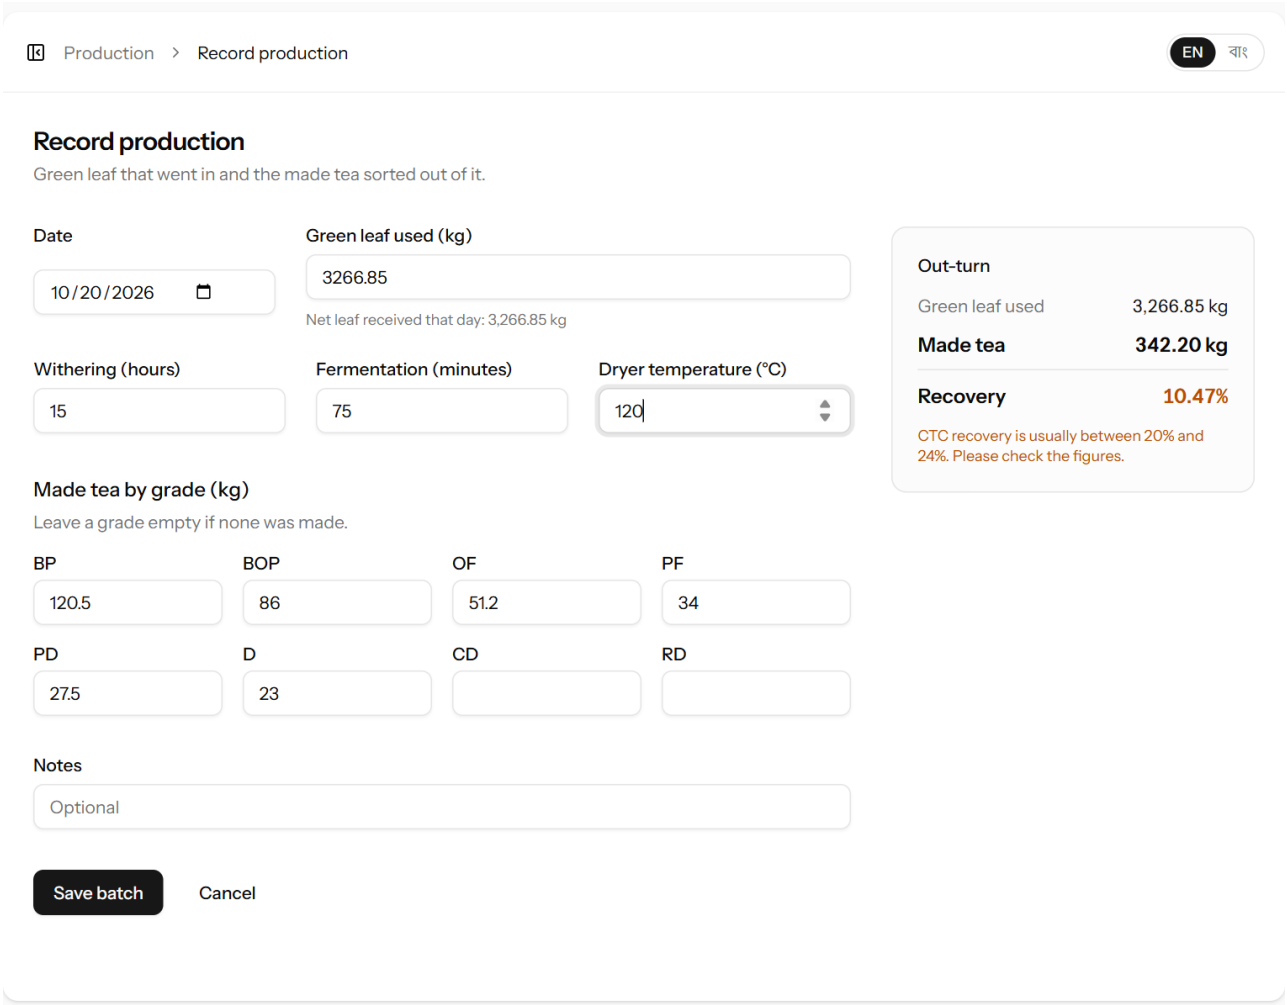

Figure 20. *Recording a batch. The Out-turn box shows recovery as you type.*

Field	What it means	Required?
Date	The day of manufacture. Cannot be in the future.	Yes
Green leaf used (kg)	The net green leaf that went into this batch.	Yes
Withering (hours)	How long the leaf was withered.	No
Fermentation (minutes)	How long the leaf was fermented.	No
Dryer temperature (°C)	The dryer's temperature.	No
A box per grade	The kg of made tea sorted into that grade. At least one grade must have tea.	At least one
Notes	Anything unusual (machine breakdown, power cut…).	No

> **Worked example:** Green leaf used 1,000 kg; made tea BP 80, BOP 60, OF 35, PF 25, PD 12, D 8 = 220 kg. Recovery = 220 ÷ 1,000 × 100 = **22.00%**.

> **Important:** If the recovery comes out below 15% or above 30%, it turns orange with a warning. CTC recovery is usually 20–24%, so a figure far outside that almost always means a typing mistake. Check the figures before saving.

8.3 Correcting or deleting a batch

Click the pencil symbol on the batch line to correct it, or the red bin symbol to delete it. The stock of each grade is updated to match. As with all entries, this is possible for three days (chapter 16).

> **Note:** If some of a batch's tea has already left the store (packed for auction, sold or adjusted), the system will not let you reduce or delete the batch below what is left. You will see a message such as "This would leave less than zero kg in stock for PF".

9. Made tea stock and tea grades

9.1 The stock page

Open **Manufacturing** → **Made tea stock** to see how much made tea of each grade is in the store right now.

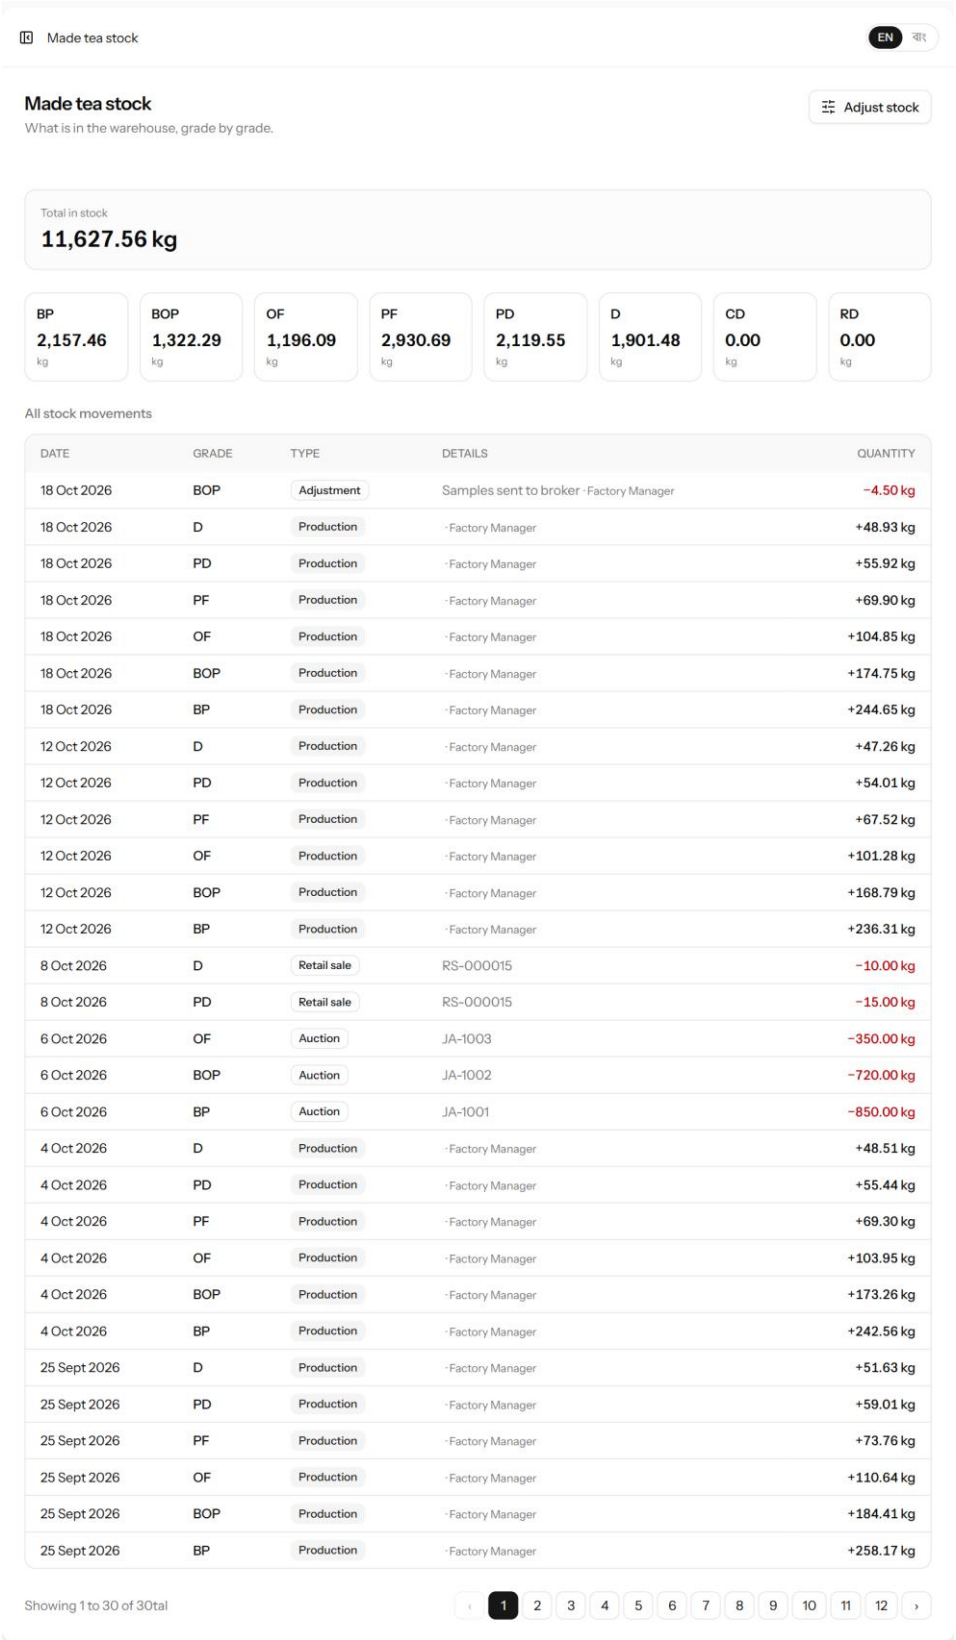

Figure 21. *Made tea in stock by grade, with every stock movement below.*

Each grade box shows the kg in stock. Click a grade to show only its movements; click it again to show all. The list below is the **stock ledger**: every kilogram in and out. Stock can never go below zero — the system refuses any entry that would cause it.

Type	Added or taken?	Comes from
Production	Added (+)	Each production batch, one line per grade (chapter 8).
Auction	Taken (−)	Packing an auction invoice (chapter 10). The detail column shows the invoice number.
Retail sale	Taken (−)	Each grade on a retail sale memo (chapter 11). The detail shows the memo number.
Adjustment	Added or taken	Corrections made by hand with a reason (9.2).

9.2 Adjusting stock

Use an adjustment when the stock in the system does not match the store: after a recount, when tea is damaged, or when samples are sent to a broker.

1. On the stock page, click **Adjust stock**.
2. Fill in the form and click **Save adjustment**.

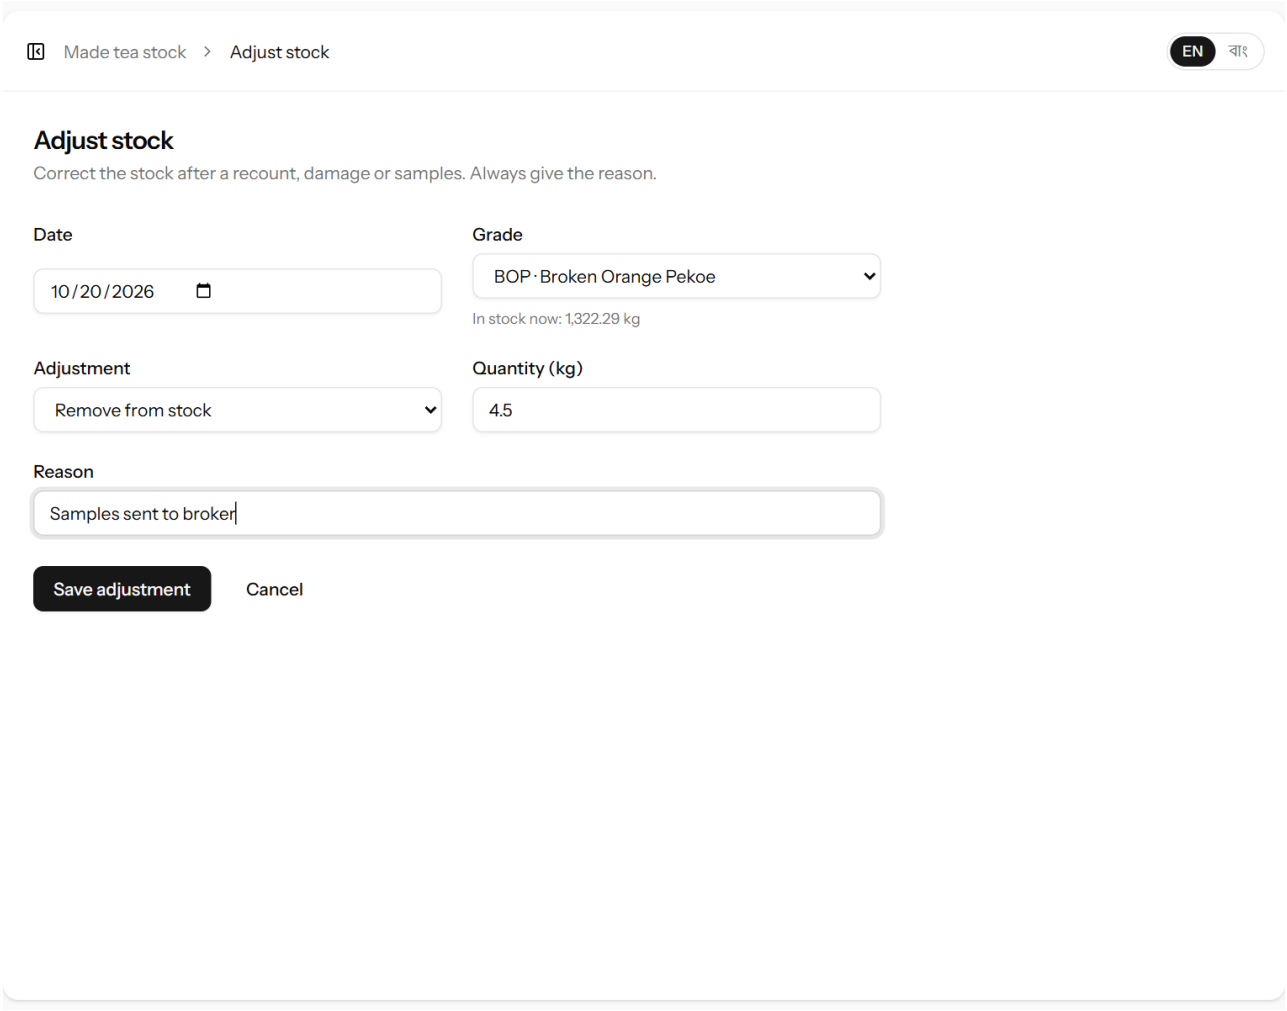

Figure 22. *Taking 4.5 kg of BOP out of stock for broker samples.*

Field	What it means	Required?
Date	The day of the adjustment.	Yes
Grade	Which grade to adjust. The kg now in stock is shown under it.	Yes
Adjustment	**Remove from stock** or **Add to stock**.	Yes
Quantity (kg)	How many kg to add or remove.	Yes
Reason	Why — for example “Monthly recount”, “Samples sent to broker”, “Water damage”. A reason is always required.	Yes

9.3 Tea grades

Open **Manufacturing** → **Tea grades** (manager and administrator only). The system starts with the usual CTC grades: BP, BOP, OF, PF, PD, D, CD and RD.

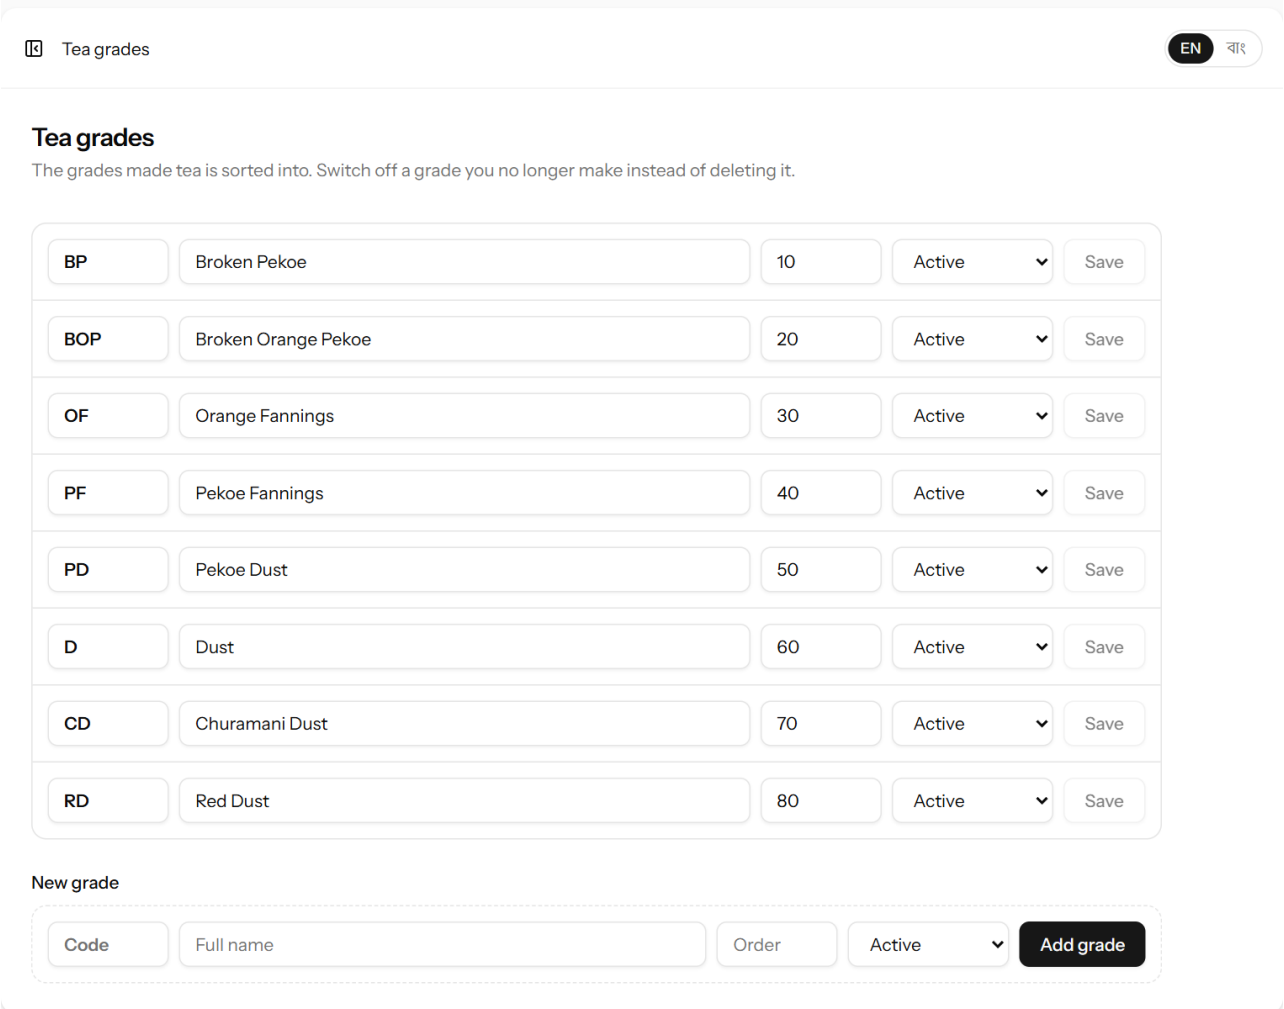

Figure 23. *The list of tea grades. Each line can be edited in place.*

- To change a grade, edit its **Code**, full name or **Order** (the position in lists — lower numbers first) and click **Save** on that line.
- To add a grade, fill in the **New grade** line at the bottom and click **Add grade**.

- Grades cannot be deleted, because old batches and sales refer to them. If the factory stops making a grade, set it to **Inactive**: it disappears from new forms but stays in the history.

10. Auction sales

Tea sold at auction is handled as **invoices**. An invoice is a number of packages of a single grade, sent to the auction through a broker. Open **Sales** → **Auction invoices**.

10.1 The life of an invoice

An invoice moves through four stages. You record each stage as it happens by opening the invoice and filling in the next part. The status is worked out by the system from what you have filled in.

Status	What has happened	What you fill in
Packed (grey)	The tea is packed in chests or bags and has left the made tea stock.	Invoice number, grade, packages and kg per package (10.3).
Dispatched (blue)	The invoice has been sent to the broker's warehouse and catalogued.	**Dispatched on**, **Sale no.**, **Lot no.** (10.4).
Sold, payment due (amber)	The tea has been sold at the auction; the broker has not paid yet.	**Sold on**, **Buyer**, **Price per kg (৳)**, **Broker deductions (৳)** (10.4).
Paid (green)	The broker has paid the net proceeds.	**Payment received on**, **Payment reference** (10.4).

10.2 The invoice list

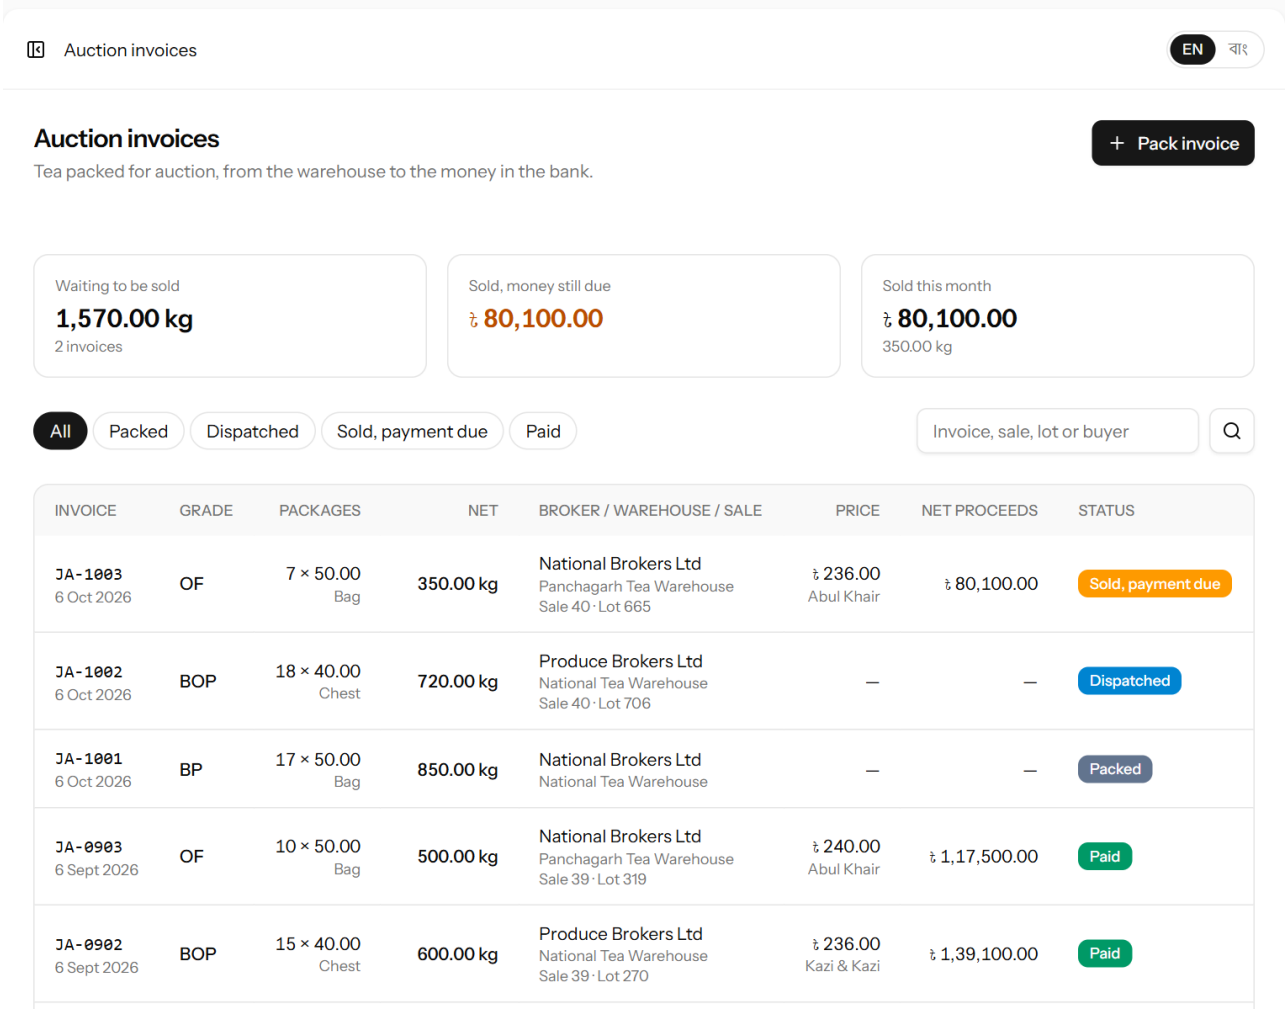

Figure 24. *Auction invoices at every stage, with the money still to come in (top of the list).*

Part	Meaning
Waiting to be sold	kg and number of invoices packed or dispatched but not yet sold.
Sold, money still due	Net proceeds of invoices sold but not yet paid by the broker.
Sold this month	Net proceeds and kg of invoices sold since the 1st of this month.
Status buttons	Show only invoices in one stage, or **All**.
Search	Find an invoice by invoice, sale or lot number or buyer.
Table	Each invoice: number and packing date, grade, packages × kg, net weight, broker, warehouse and sale/lot, price and buyer, net proceeds and status. Click the invoice number to open it.

10.3 Packing a new invoice

1. Click **Pack invoice**.
2. Check the **Invoice no.** — the next number (for example JA-0007) is suggested; change it if the factory uses another numbering.

3. Choose the **Grade**. The kg available in stock is shown under it.
4. Choose **Packed in** (chest or bag) and enter the **Number of packages** and **Net kg per package**. The net weight is shown on the right.
5. Choose the **Warehouse**, the **Broker** and the **Auction centre** if already known.
6. Click **Pack invoice**. The tea is taken out of stock.

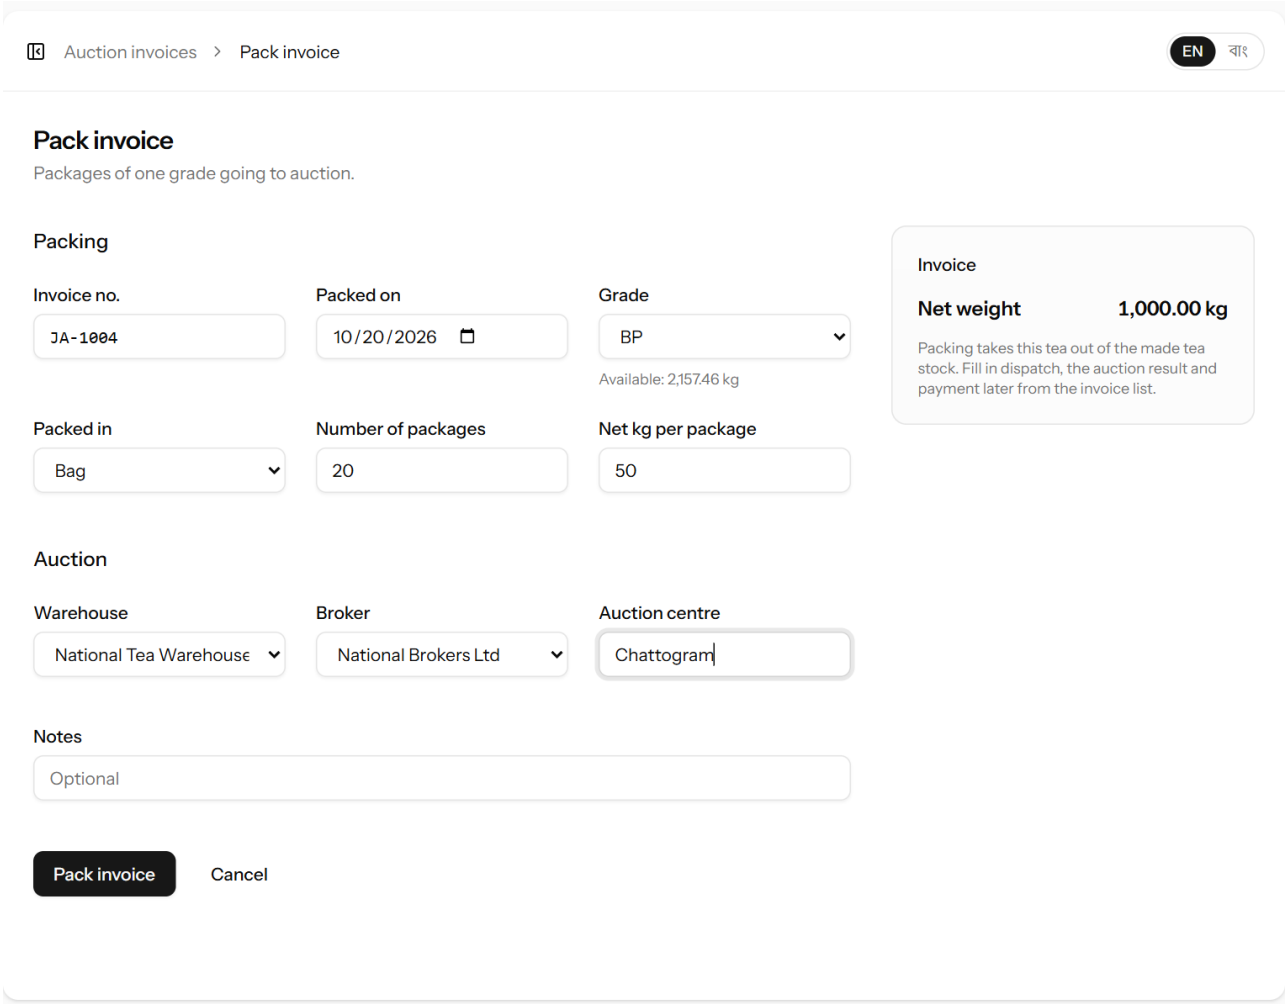

Figure 25. *Packing 20 bags of 50 kg of BP for the National Tea Warehouse.*

Field	What it means	Required?
Invoice no.	The garden invoice number. Each invoice number can be used only once.	Yes
Packed on	The date the tea was packed.	Yes
Grade	The grade of tea in this invoice. One invoice = one grade.	Yes
Packed in	**Chest** or **Bag**.	Yes
Number of packages	How many chests or bags.	Yes
Net kg per package	The net tea weight in each package.	Yes
Warehouse	The auction warehouse the invoice is sent to (see 10.7).	No
Broker	The broker who will sell the invoice (see 10.6).	No

Field	What it means	Required?
Auction centre	Where it will be sold, for example Chattogram, Srimangal or Panchagarh.	No
Notes	Anything else.	No

> **Note:** If the net weight is more than the stock of that grade, a red warning appears and the system will not save the invoice.

10.4 Recording dispatch, the auction result and payment

Open the invoice by clicking its number in the list. The packing part stays at the top; the auction parts are below it. Fill in what has happened and click **Save changes**. You can do this in several visits, one stage at a time.

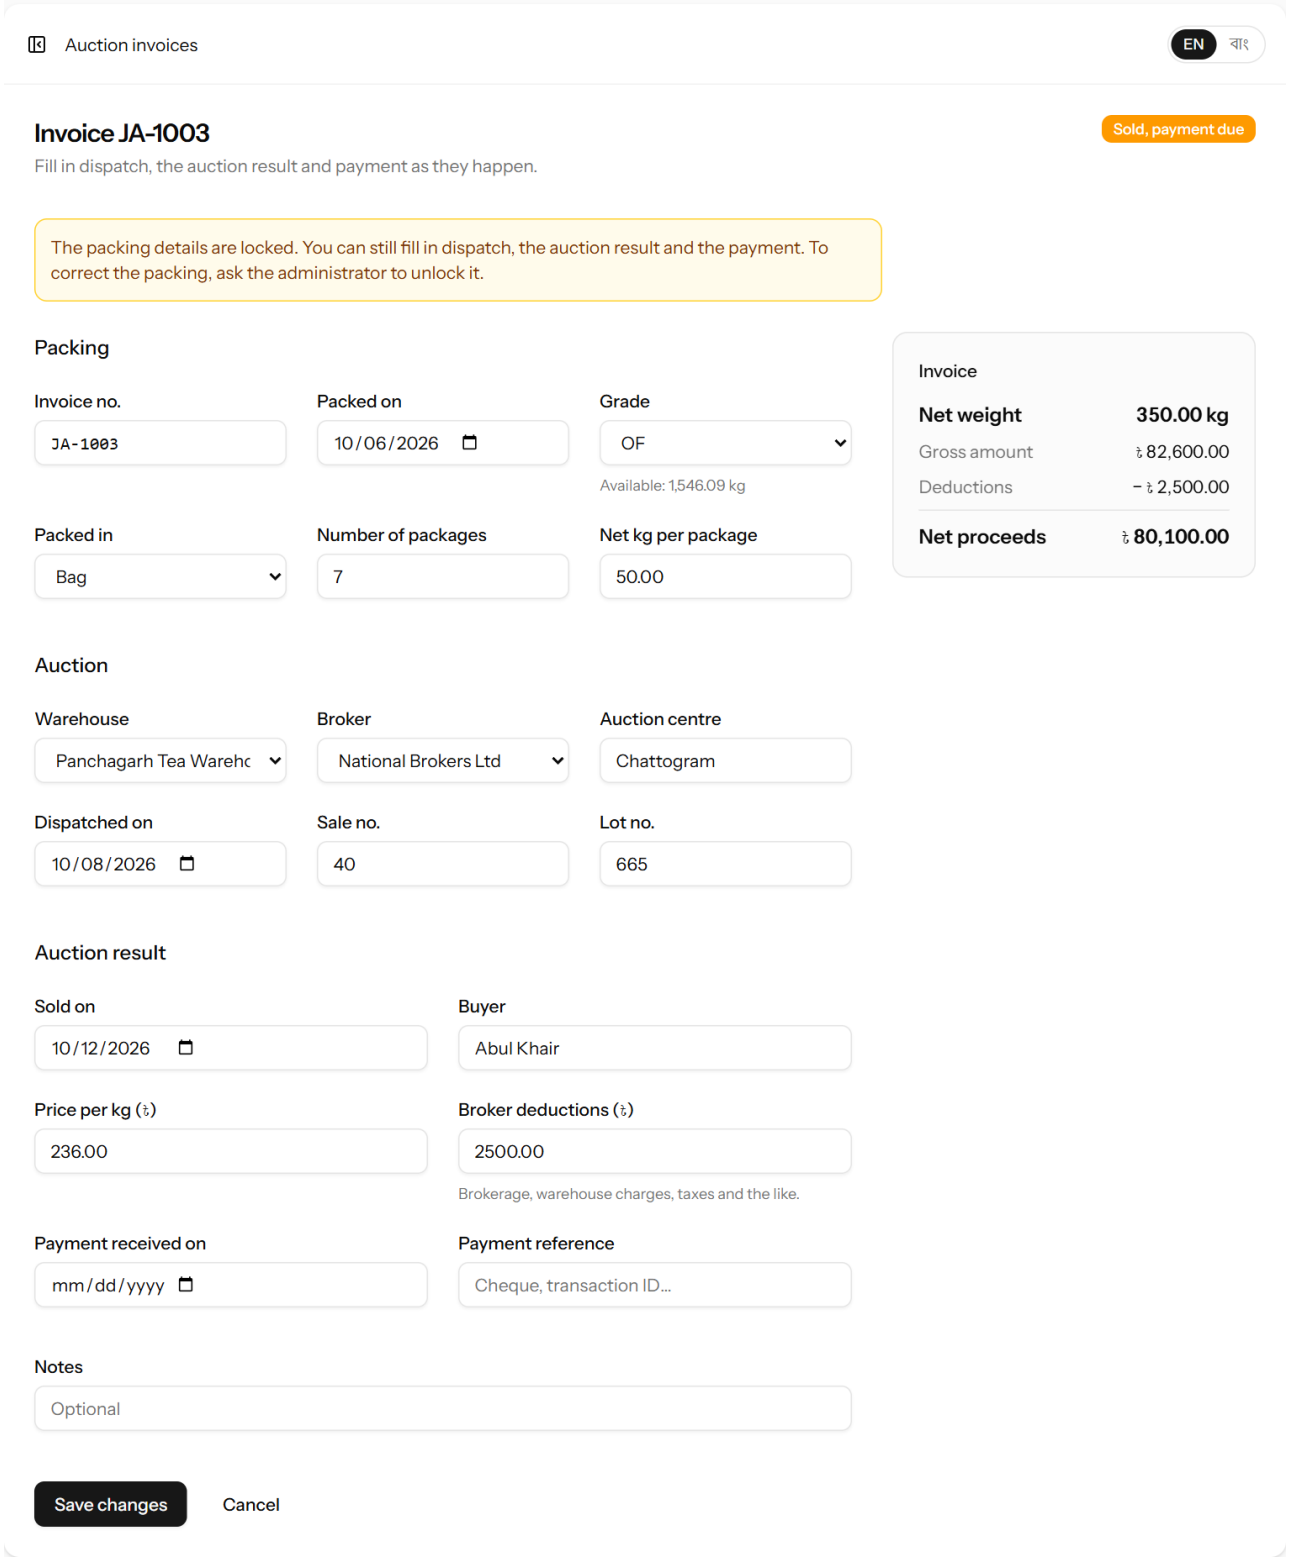

Figure 26. *An invoice sold at auction, waiting for the broker's payment.*

Field	What it means	Required?
Dispatched on	The day the invoice left for the broker's warehouse. Not before the packing date.	No
Sale no. / Lot no.	The auction sale number and the lot number from the broker's catalogue.	No

Field	What it means	Required?
Sold on	The auction date. Must be filled together with the price.	With price
Buyer	The company that bought the tea.	No
Price per kg (৳)	The auction price. Must be filled together with the sold date.	With date
Broker deductions (৳)	Everything the broker takes out of the proceeds: brokerage, warehouse charges, taxes and the like, as one total.	No
Payment received on	The day the broker's money arrived. Only possible once the price is recorded.	No
Payment reference	Cheque number or bank transaction ID.	No

> **Worked example:** 20 bags × 40.50 kg = **810 kg** net. Sold at ৳215.50 per kg.
> Gross amount = 810 × 215.50 = **৳174,555.00**.
> Broker deductions ৳3,500 → Net proceeds = 174,555 − 3,500 = **৳171,055.00**.

> **Note:** In the cash book (chapter 14), auction money is always counted as received by **bank**.
> Three days after packing, the **packing** details (invoice number, date, grade, packages and kg) lock like other entries (chapter 16). Dispatch, the auction result and the payment can still be filled in at any time, because they happen weeks later.

10.5 Deleting an invoice

An invoice packed by mistake can be deleted while it is not yet sold and within three days of packing: open it and click **Delete**. Its tea goes back into stock. Once an auction price is recorded the invoice can no longer be deleted.

10.6 Brokers

Open **Sales** → **Brokers** (manager and administrator only) to keep the list of brokers the factory sells through.

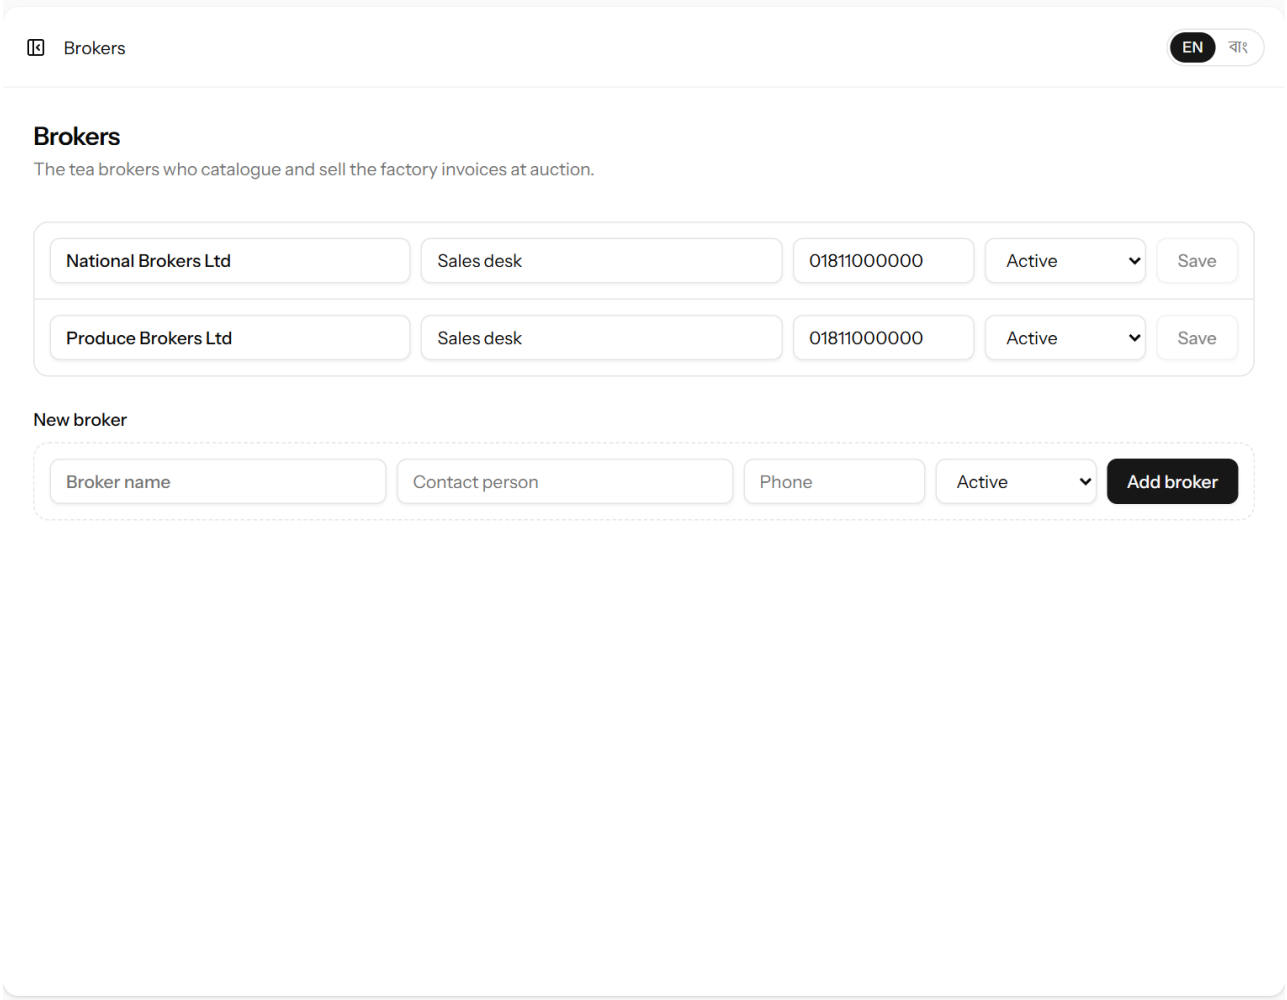

Figure 27. *The list of brokers.*

Edit a broker's **Broker name**, **Contact person**, **Phone** or status on its line and click **Save**; add a broker on the **New broker** line. A broker the factory no longer uses can be set to **Inactive**.

10.7 Warehouses

Open **Sales** → **Warehouses** (manager and administrator only) to keep the list of auction warehouses the factory sends its invoices to. Under each name the page shows how many invoices there are still waiting to be sold, and their kg.

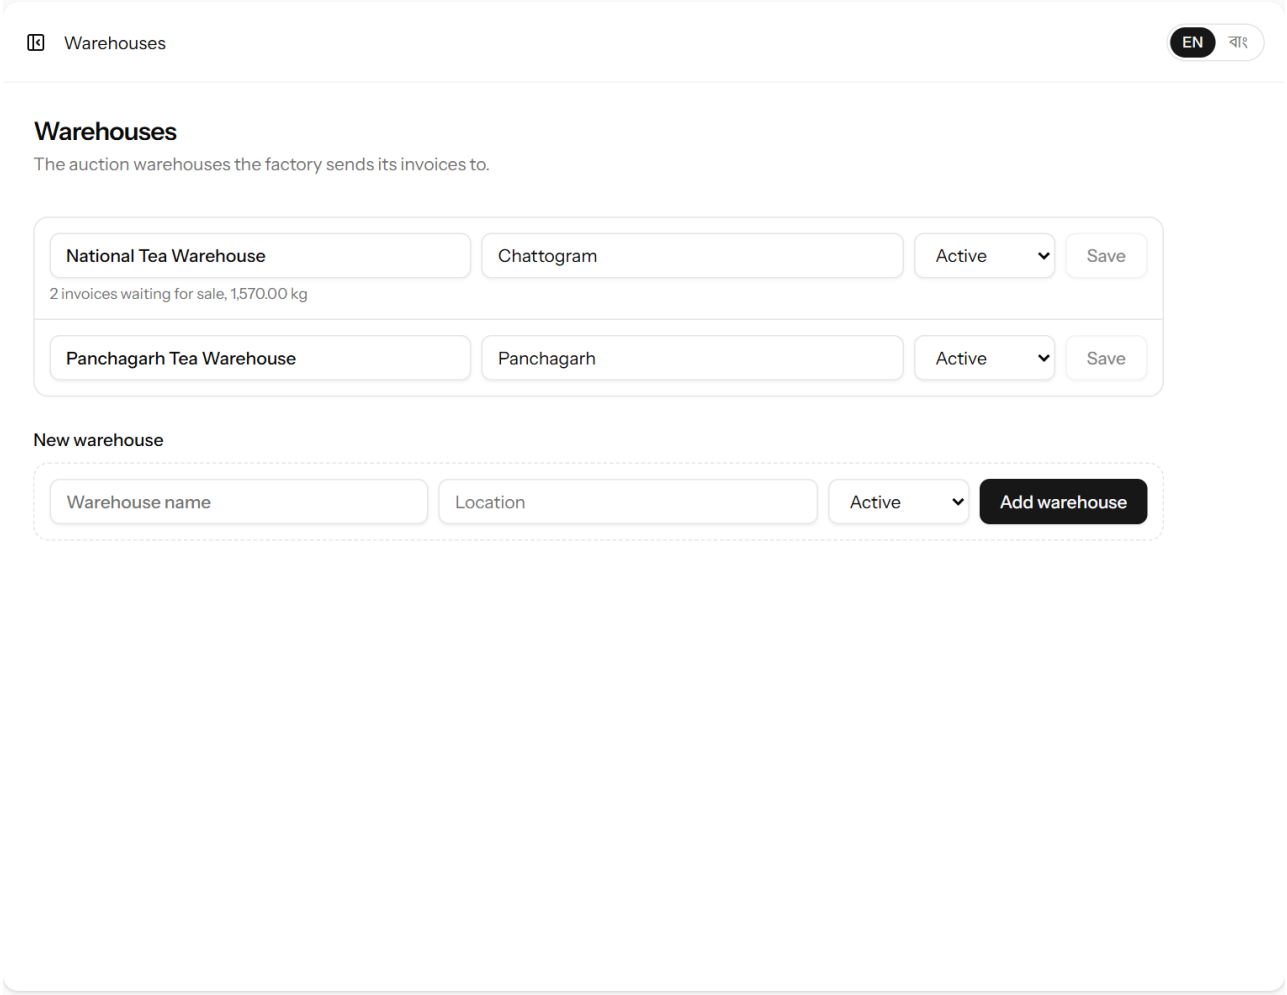

Figure 28. *The auction warehouses.*

Edit a warehouse's **Warehouse name**, **Location** or status on its line and click **Save**; add one on the **New warehouse** line. A warehouse no longer used can be set to **Inactive**.

11. Retail sales and customers

Tea sold directly to shops and buyers is recorded as **sale memos**. Buyers who buy on credit are kept as **customers** with an account, like suppliers.

11.1 Customers

Open **Sales → Customers**. The list shows each customer's total purchases and their balance — what they still owe the factory. At the top is the **Total due from customers**.

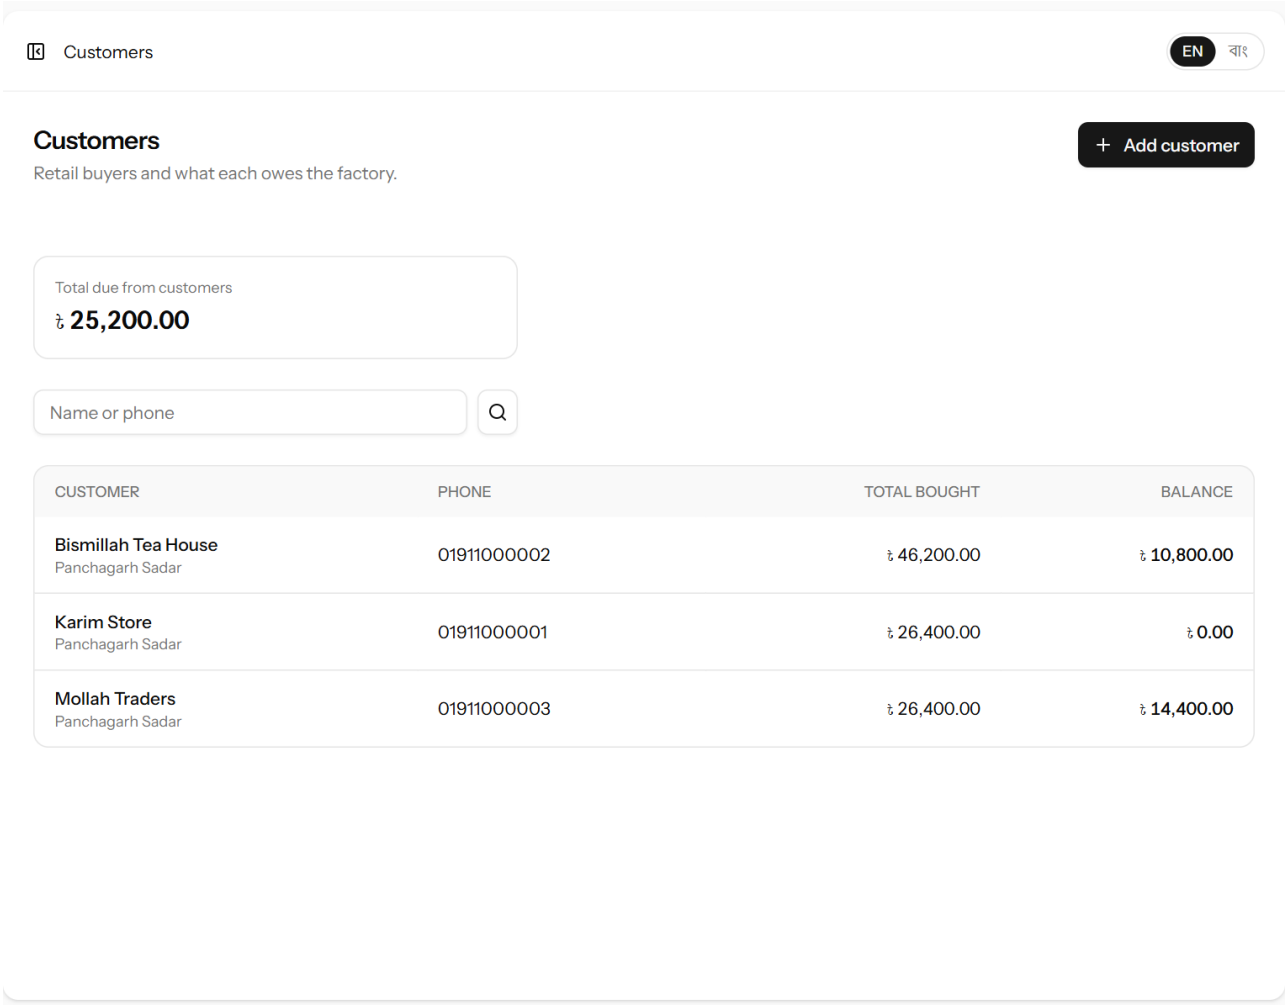

Figure 29. *The customer list with what each customer owes.*

To add a customer, click **Add customer**, fill in the form and click **Add customer**.

Field	What it means	Required?
Customer name	The shop or buyer's name.	Yes
Phone	Mobile number.	No
Address	Where they are.	No
Opening balance (৳)	What the customer already owed the factory when you started using the system.	No
Status	**Inactive** customers are not offered on new sales.	Yes

Field	What it means	Required?
Notes	Anything else.	No

11.2 Writing a sale memo

1. Open **Sales** → **Retail sales** and click **New sale** (or click **New sale** on a customer's statement).
2. Check the **Date** and choose the **Customer**. For a buyer who is not a regular customer, leave **Walk-in (cash, paid in full)**.
3. Under **Tea sold**, choose a grade (the kg in stock is shown in the list), and enter the kg and the rate per kg. Click **Add another grade** for each further grade on the same memo.
4. Under **Payment**, enter what was **Received now (৳)** and how it was paid. Click **Paid in full** if the whole amount was paid.
5. Check the **Memo** box on the right: total, received now and what will be added to the customer's due.
6. Click **Save & print memo**.

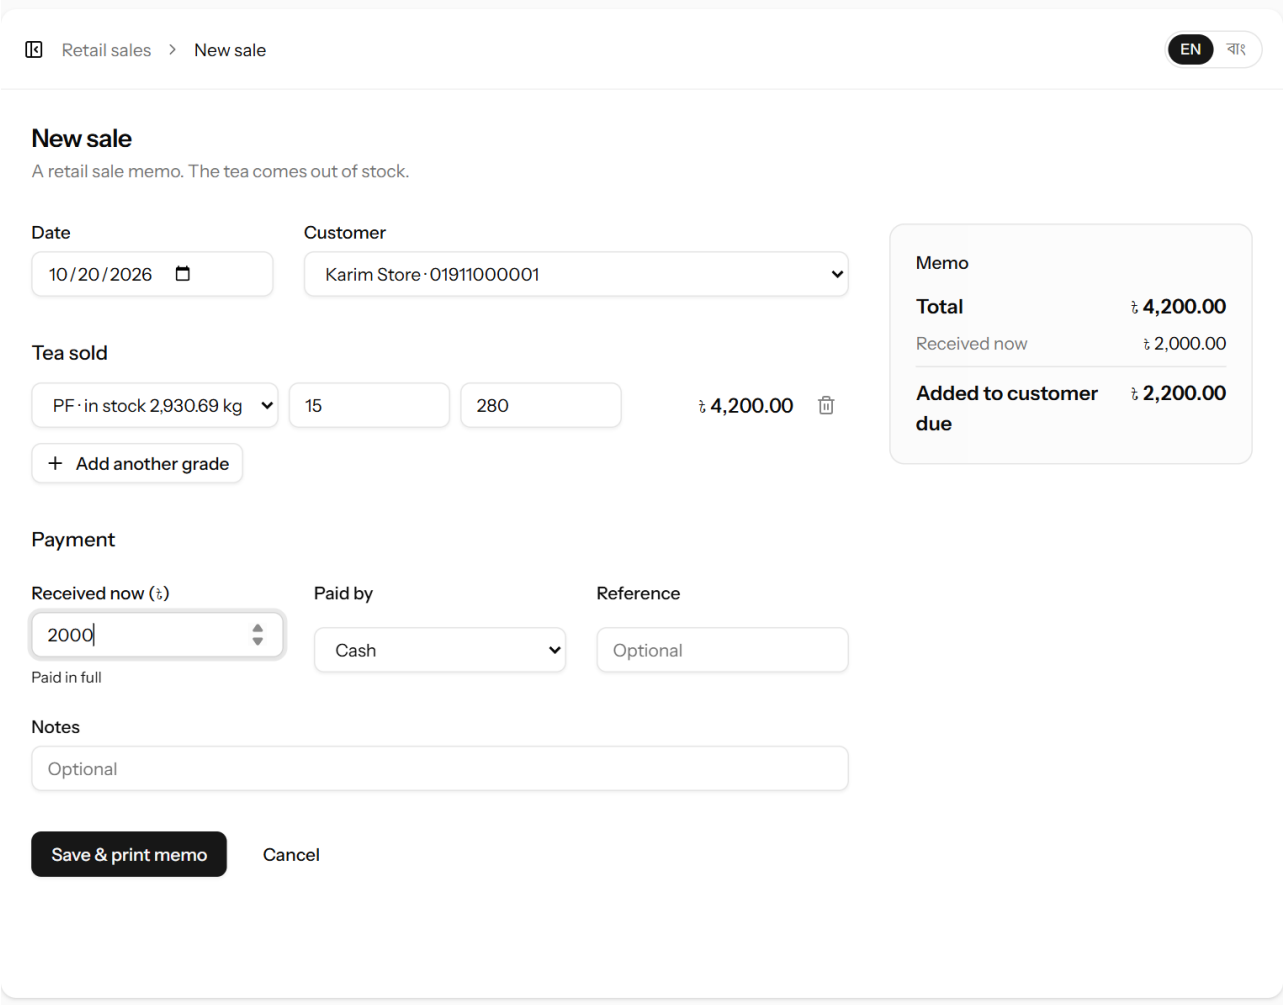

Figure 30. *A credit sale: ৳4,200 of PF, ৳2,000 paid now, ৳2,200 added to the customer's due.*

Field	What it means	Required?
Date	The day of the sale.	Yes

Field	What it means	Required?
Customer	Who bought. Walk-in sales have no customer.	No
Grade (per line)	The grade sold. The same grade cannot appear twice on one memo.	Yes
kg (per line)	How many kg of that grade.	Yes
৳ per kg (per line)	The selling price.	Yes
Received now (৳)	Money taken at the time of the sale. For a walk-in sale this is always the full total.	No
Paid by	**Cash**, **Bank** or **Mobile banking**.	Yes
Reference	Transaction ID for bank or mobile payments.	No
Notes	Anything else.	No

> **Important:** A walk-in sale (no customer) must be paid in full — there is nobody to owe the money.
> A sale cannot take more tea than is in stock. If one grade is short, nothing on the memo is saved.

11.3 The sale memo

After saving, the memo opens. Click **Print memo** to print it for the buyer. Each memo has a number such as **RS-000015** (RS = retail sale).

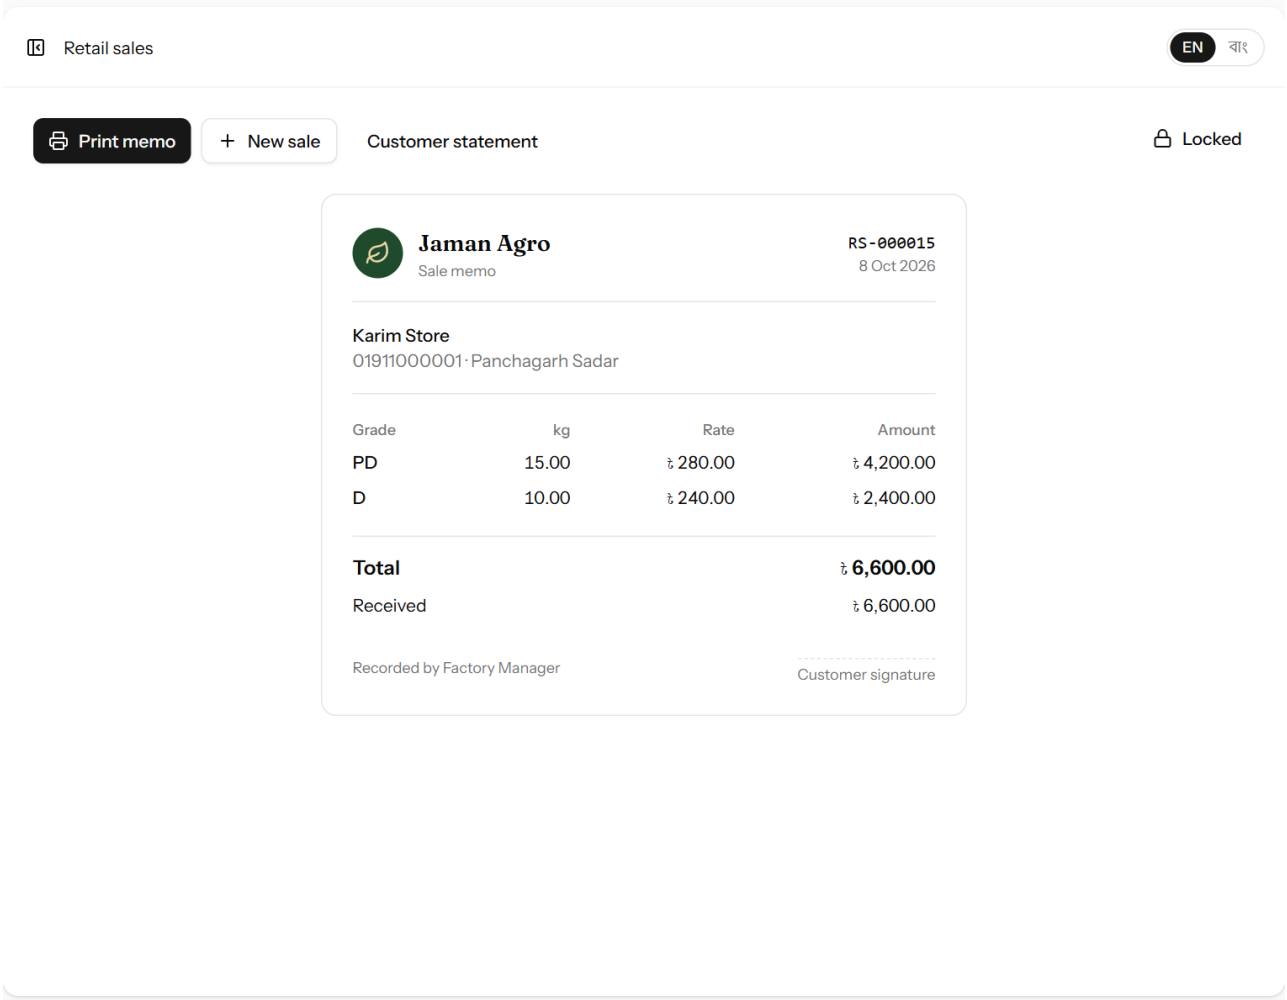

Figure 31. *A printed sale memo with the amount due.*

11.4 Cancelling a sale

Retail sales cannot be edited. If a memo is wrong, open it, click **Cancel sale** and confirm, then write it again correctly. Cancelling puts the tea back into stock and removes the money taken with the sale. A sale can be cancelled for three days; after that the button shows **Locked** (chapter 16).

11.5 The sales list and the customer statement

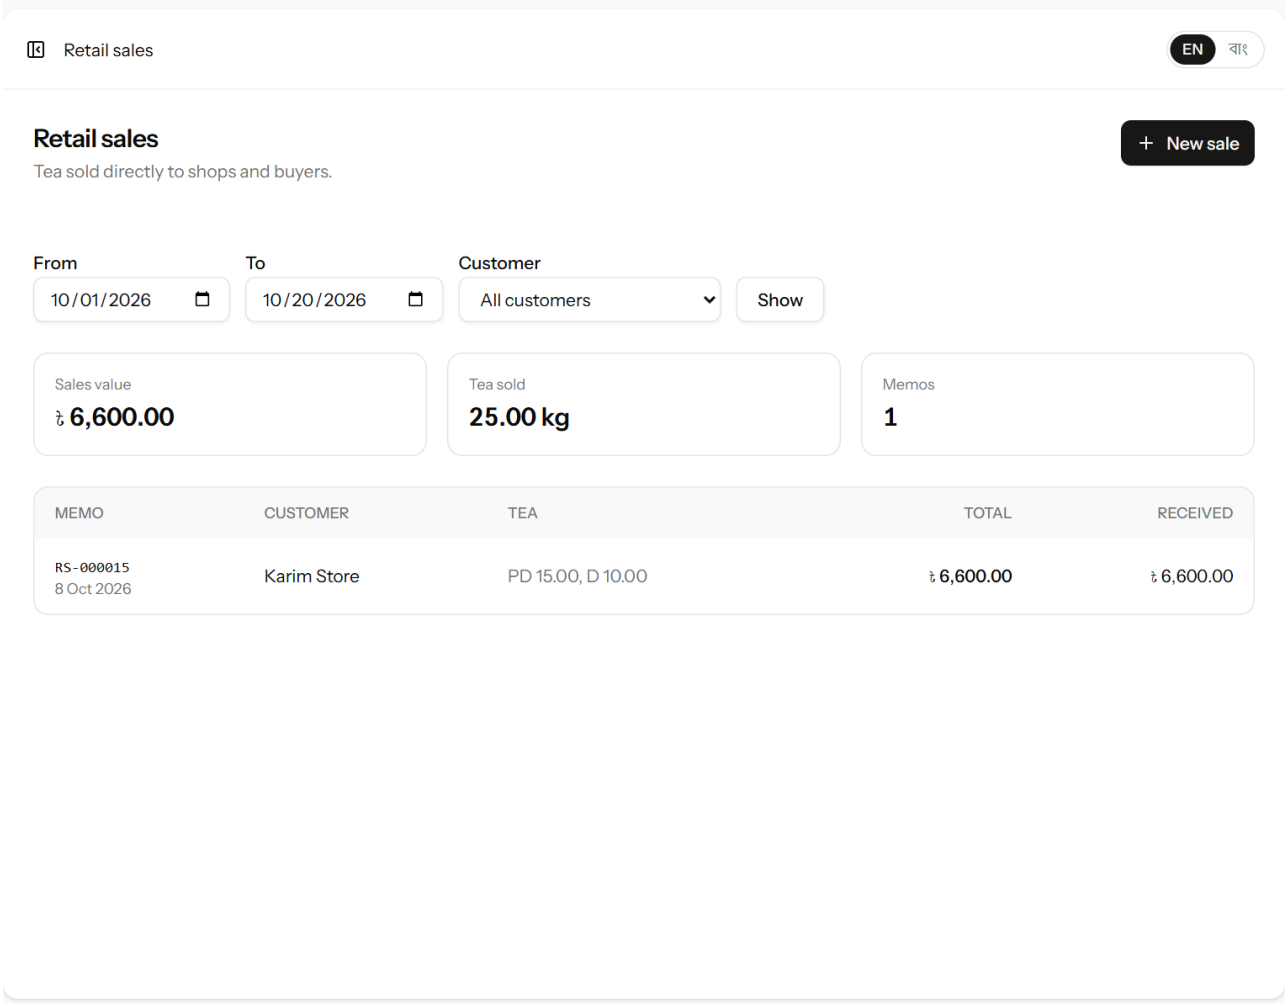

Figure 32. *Retail sales for a period with totals.*

The **Retail sales** list shows every memo in a period (choose **From**, **To** and optionally a customer, then **Show**), with the sales value, kg sold and number of memos at the top.

Click a customer's name in the **Customers** list to open their **statement**. It works like the supplier statement: opening balance, each sale (which adds to what they owe) and each payment (which reduces it), a running balance and the closing balance. Print it to send to the customer.

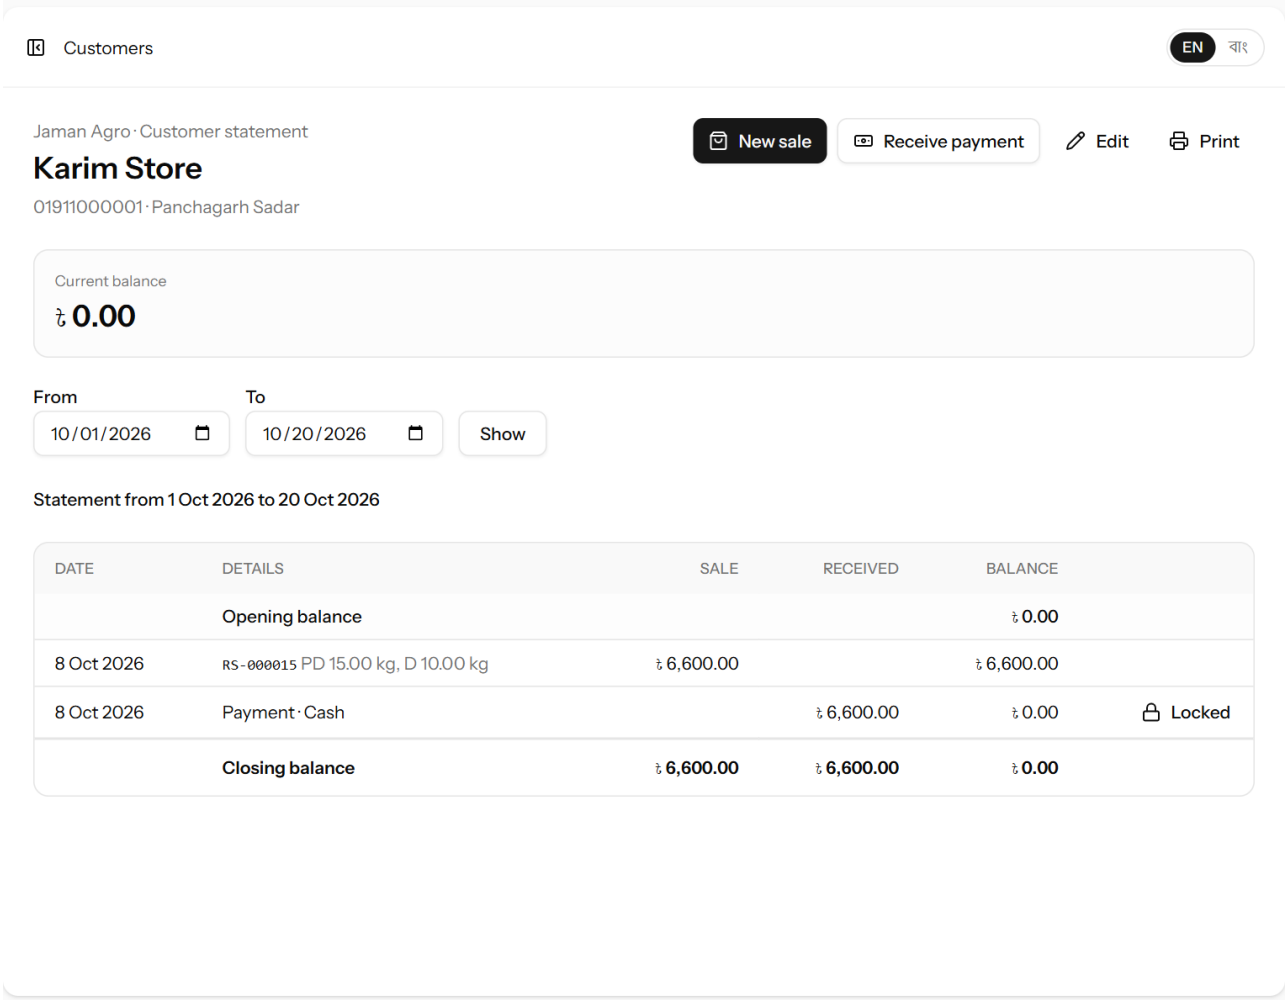

Figure 33. *A customer statement.*

11.6 Receiving money from a customer

1. On the customer's statement, click **Receive payment**. The customer is filled in and their current balance shown.
2. Enter the date, amount, how it was paid and any reference.
3. Click **Receive payment**. The statement opens with the payment on it.

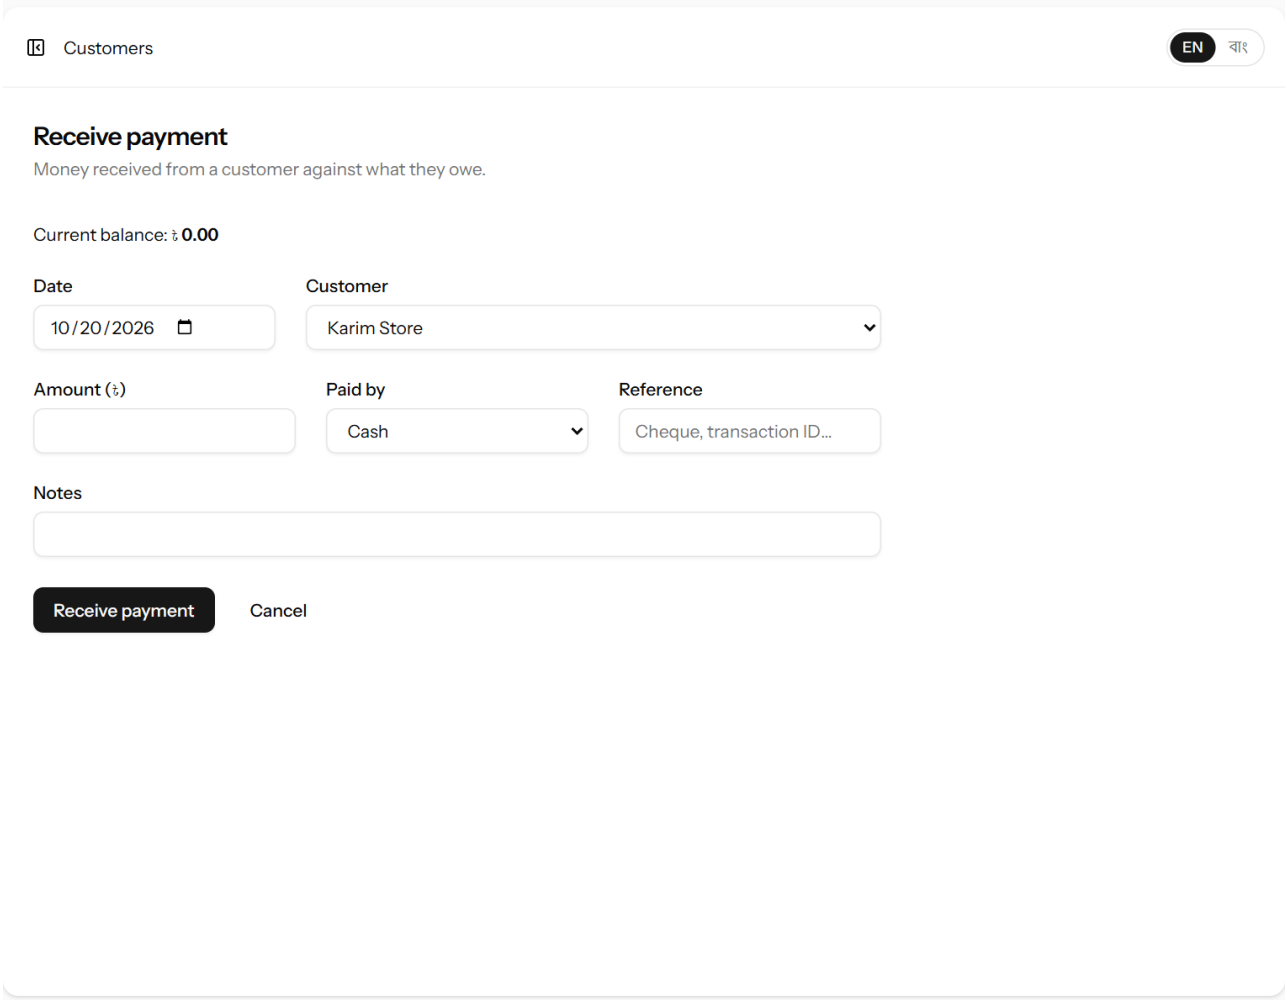

Figure 34. *Receiving a payment from a customer.*

A payment received later can be deleted from the customer's statement with the red bin symbol, within three days of recording it. Money taken together with a sale can only be removed by cancelling that sale.

12. Expenses

Record every running cost here — both the **factory's** costs (fuel, electricity, repairs, machine parts, packing materials, loading and so on) and the running costs of the factory's own **vehicles** (fuel, driver salary, repairs). Open **Accounts** → **Expenses**.

12.1 The month page

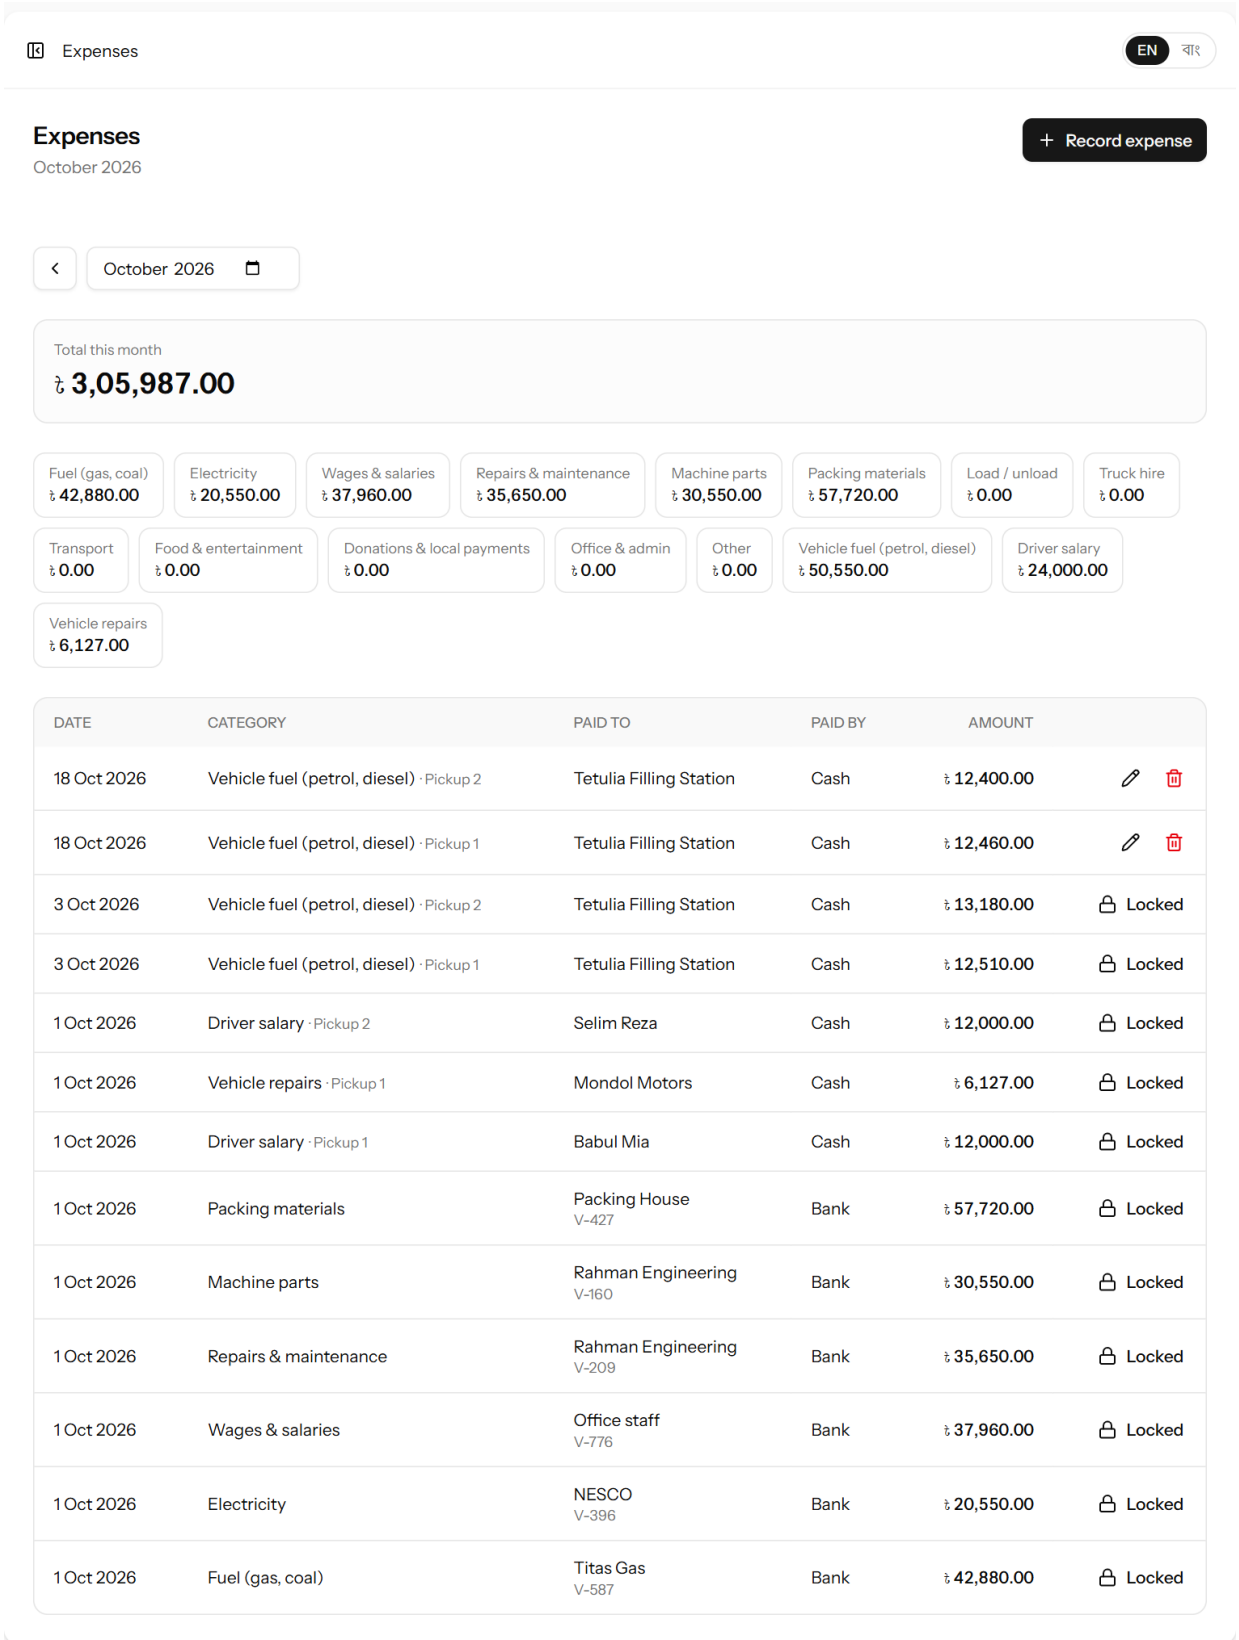

Figure 35. *A month of expenses with a total per category.*

The page shows one month (use ‹ › or the month box). At the top is the total for the month, then one box per category with its total — click a category to see only its expenses, click it again to see all.

12.2 Recording an expense

1. Click **Record expense**.
2. Fill in the form and click **Record expense**.

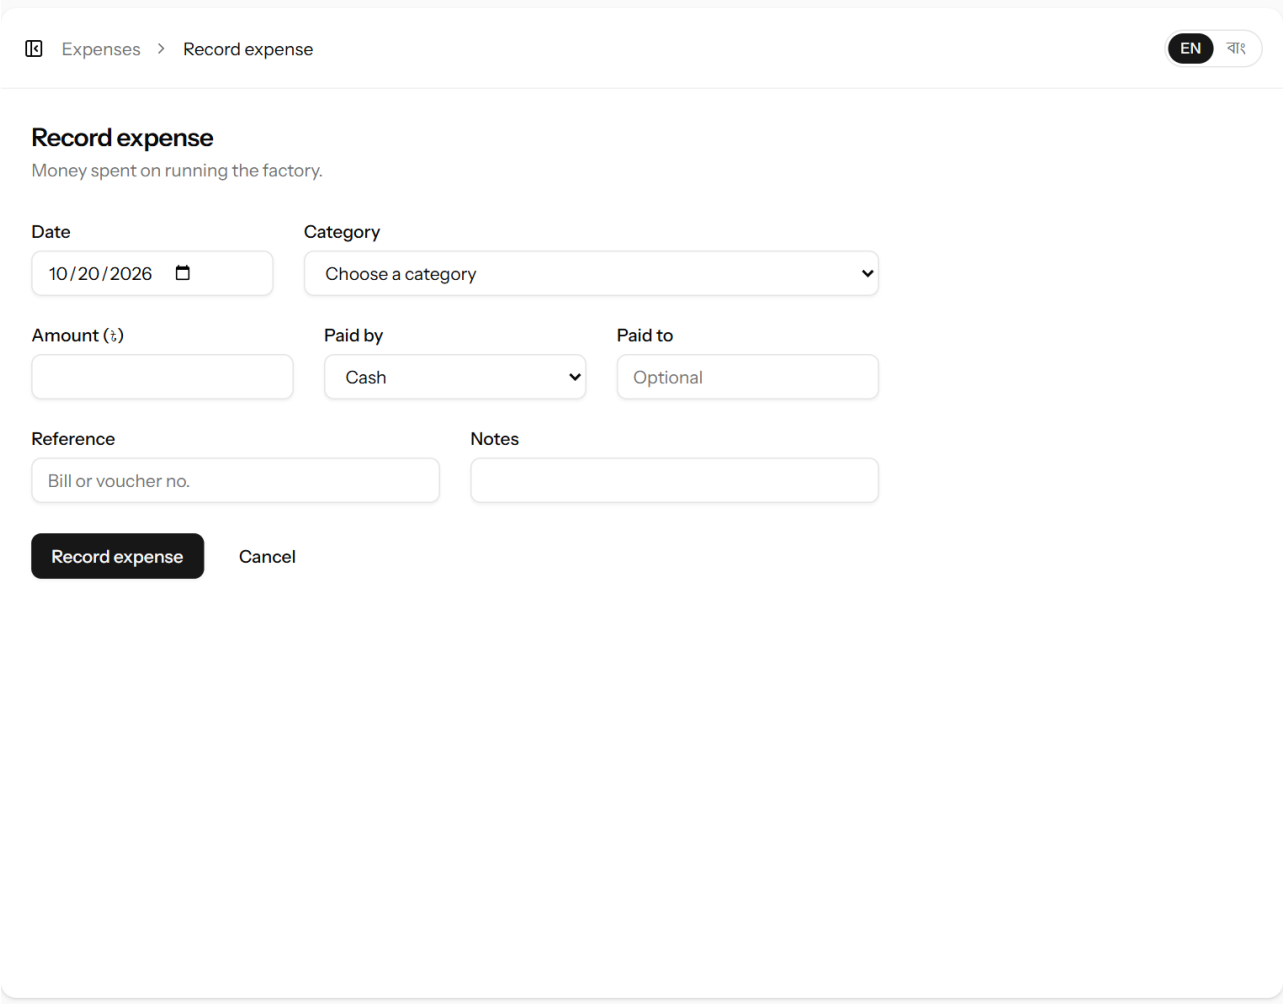

Figure 36. *Recording an expense.*

Field	What it means	Required?
Date	The day the money was spent.	Yes
Category	What the money was spent on (see 12.3). The list is split into **Factory** and **Vehicle** categories.	Yes
Factory vehicle	Appears only for a vehicle category: which vehicle the money was spent on.	For vehicle costs
Amount (৳)	How much was spent.	Yes
Paid by	**Cash**, **Bank** or **Mobile banking**.	Yes
Paid to	Who was paid, for example “Titas Gas”.	No
Reference	Bill or voucher number.	No
Notes	Anything else.	No

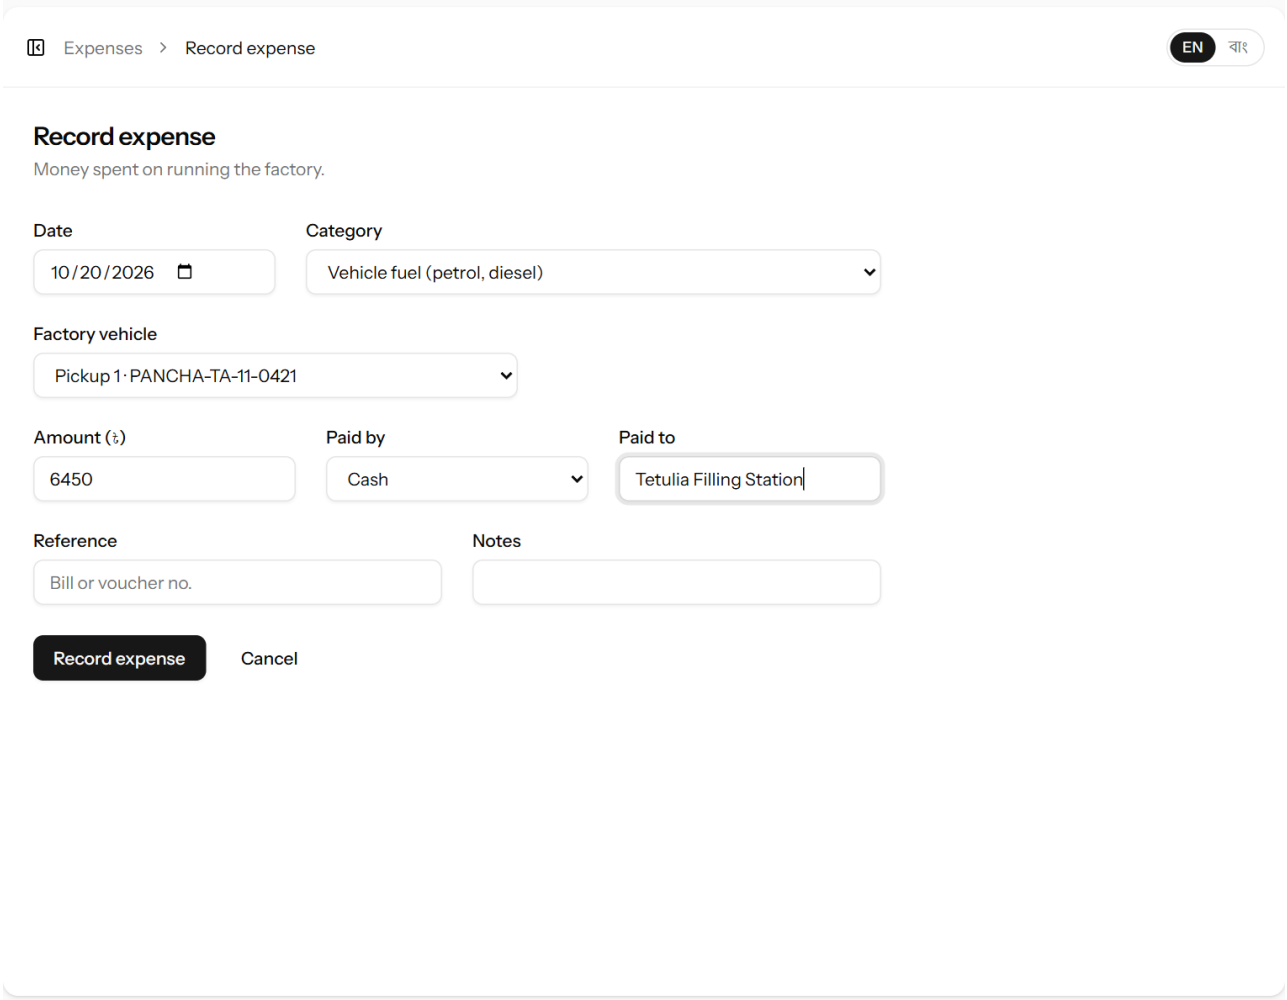

Figure 37. *A vehicle expense: diesel for Pickup 1.*

In the list, a vehicle expense shows the vehicle's name next to its category. Use the pencil symbol to correct an expense and the red bin symbol to delete one entered by mistake — within three days of recording it (chapter 16).

12.3 Expense categories

Open **Accounts** → **Expense categories** (manager and administrator only). Each category has a **Kind**: **Factory** or **Vehicle**. Vehicle costs are reported as **transport cost** and added to the cost of the leaf (15.1).

Kind	Categories the system starts with
Factory	Fuel (gas, coal), Electricity, Wages & salaries, Repairs & maintenance, Machine parts, Packing materials, Load / unload, Truck hire, Transport, Food & entertainment, Donations & local payments, Office & admin, Other
Vehicle	Vehicle fuel (petrol, diesel), Driver salary, Vehicle repairs

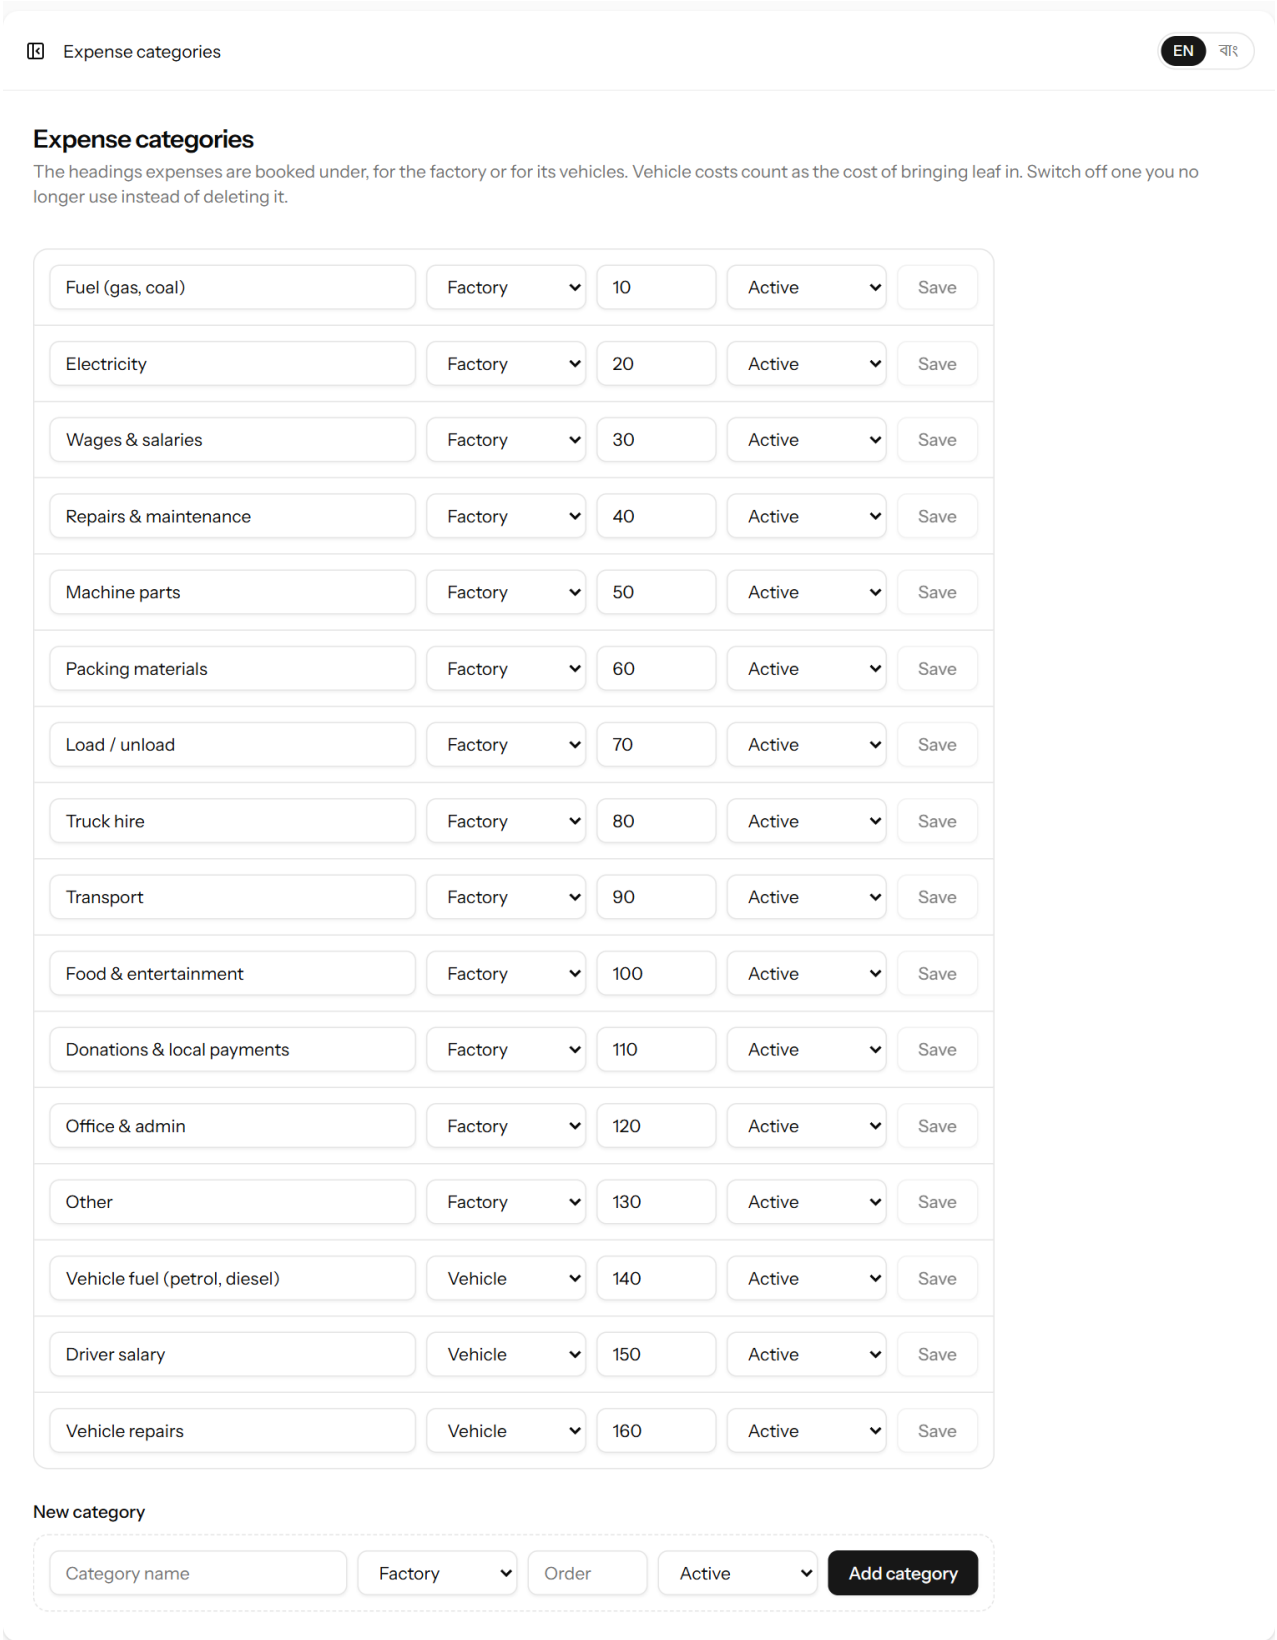

Figure 38. *The expense categories, each marked Factory or Vehicle.*

Rename, reorder or change the kind of a category on its line and click **Save**, or add one on the **New category** line. A category that is no longer used can be set to **Inactive**; it cannot be deleted because old expenses refer to it.

> **Important:** Daily workers are paid from the **Wages** page (chapter 13), and their pay is counted in the reports from there. Use the **Wages & salaries** expense category only for **salaried staff** who are not on the attendance sheet or contract work — otherwise the same wages would be counted twice.

13. Workers and wages

The factory pays two kinds of daily workers. **Hourly workers** are paid for the hours between their time in and time out. **Contract workers** are paid for the work they do — per kg of leaf unloaded, per bag filled or loaded, per ton of coal and so on. Both are paid twice a week. Everything is under **Workforce** in the menu.

13.1 Workers

Workforce → **Workers** lists every worker, how they are paid, their hourly rate and what the factory owes them right now.

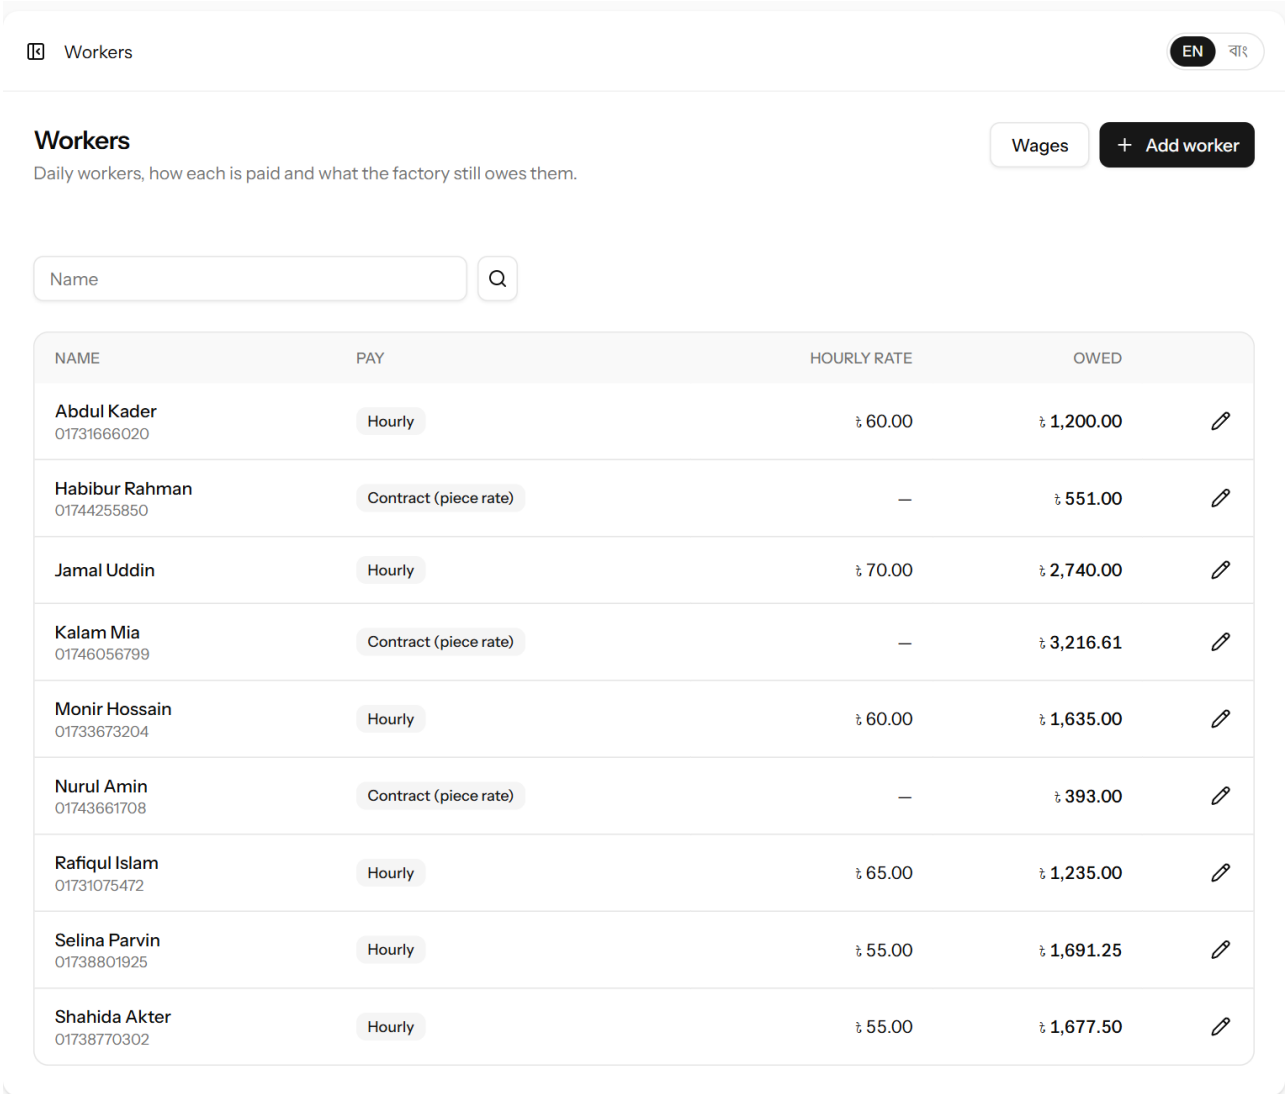

Figure 39. *The list of workers with what each is owed.*

1. Click **Add worker**.
2. Fill in the form and click **Add worker**.

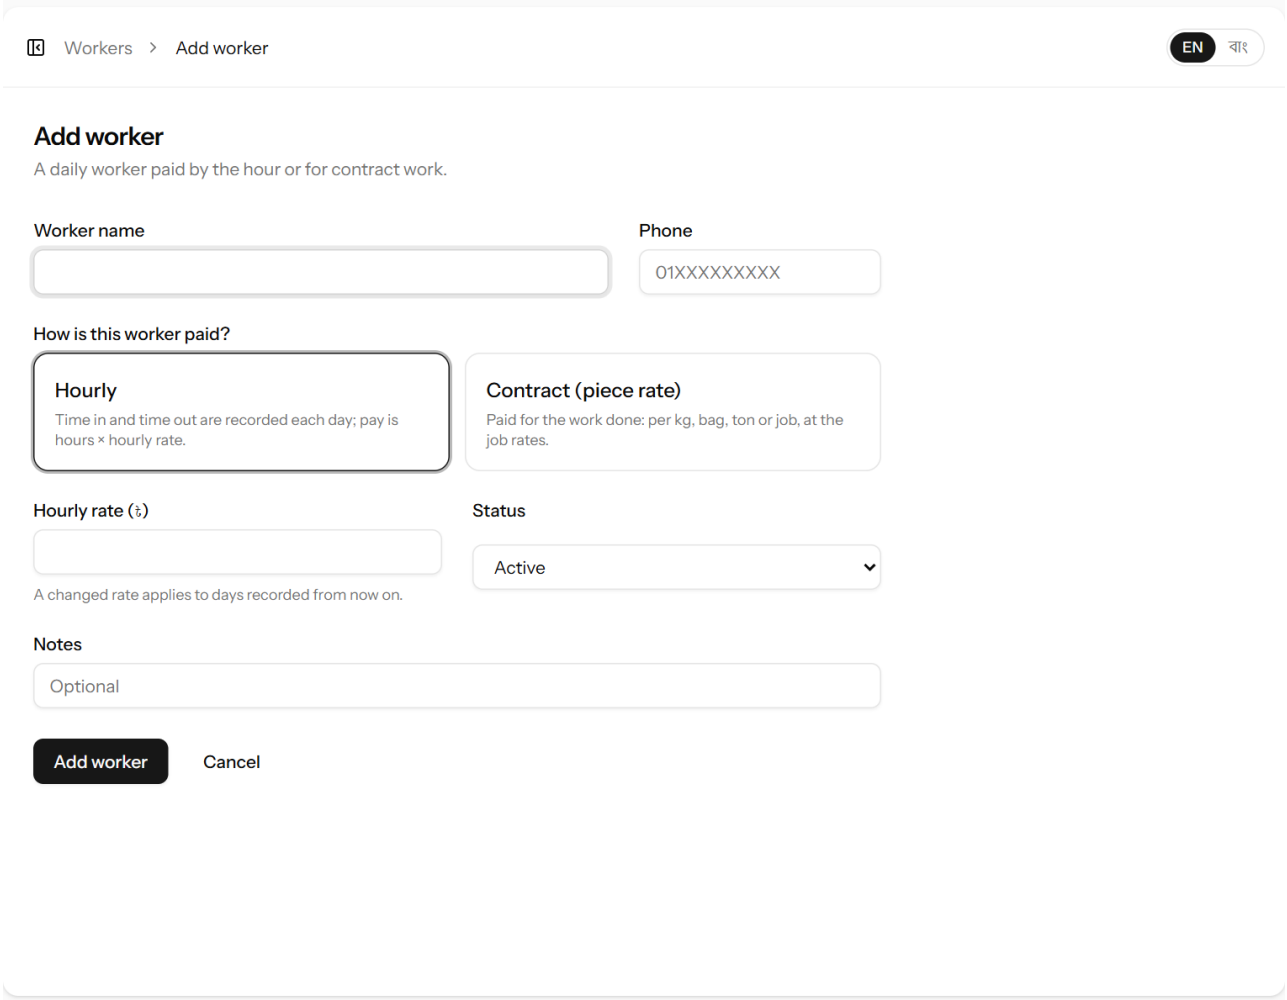

Figure 40. *Adding a worker. Click the box that describes how the worker is paid.*

Field	What it means	Required?
Worker name	The worker's name as it should appear on the sheets.	Yes
Phone	Mobile number.	No
How is this worker paid?	**Hourly** — on the attendance sheet, paid hours × hourly rate. **Contract (piece rate)** — paid for contract work at the job rates.	Yes
Hourly rate (৳)	What an hourly worker earns per hour. Shown only for hourly workers.	For hourly
Status	**Inactive** workers no longer appear on the attendance sheet or in the contract-work list.	Yes
Notes	Anything else, for example "Night dryer shift".	No

To change a worker, click the pencil symbol. A new hourly rate applies to days recorded from then on; days already recorded keep their rate. Workers are never deleted — set someone who has left to **Inactive**.

13.2 Attendance

Workforce → Attendance is the sheet for one day, with a line for every active hourly worker.

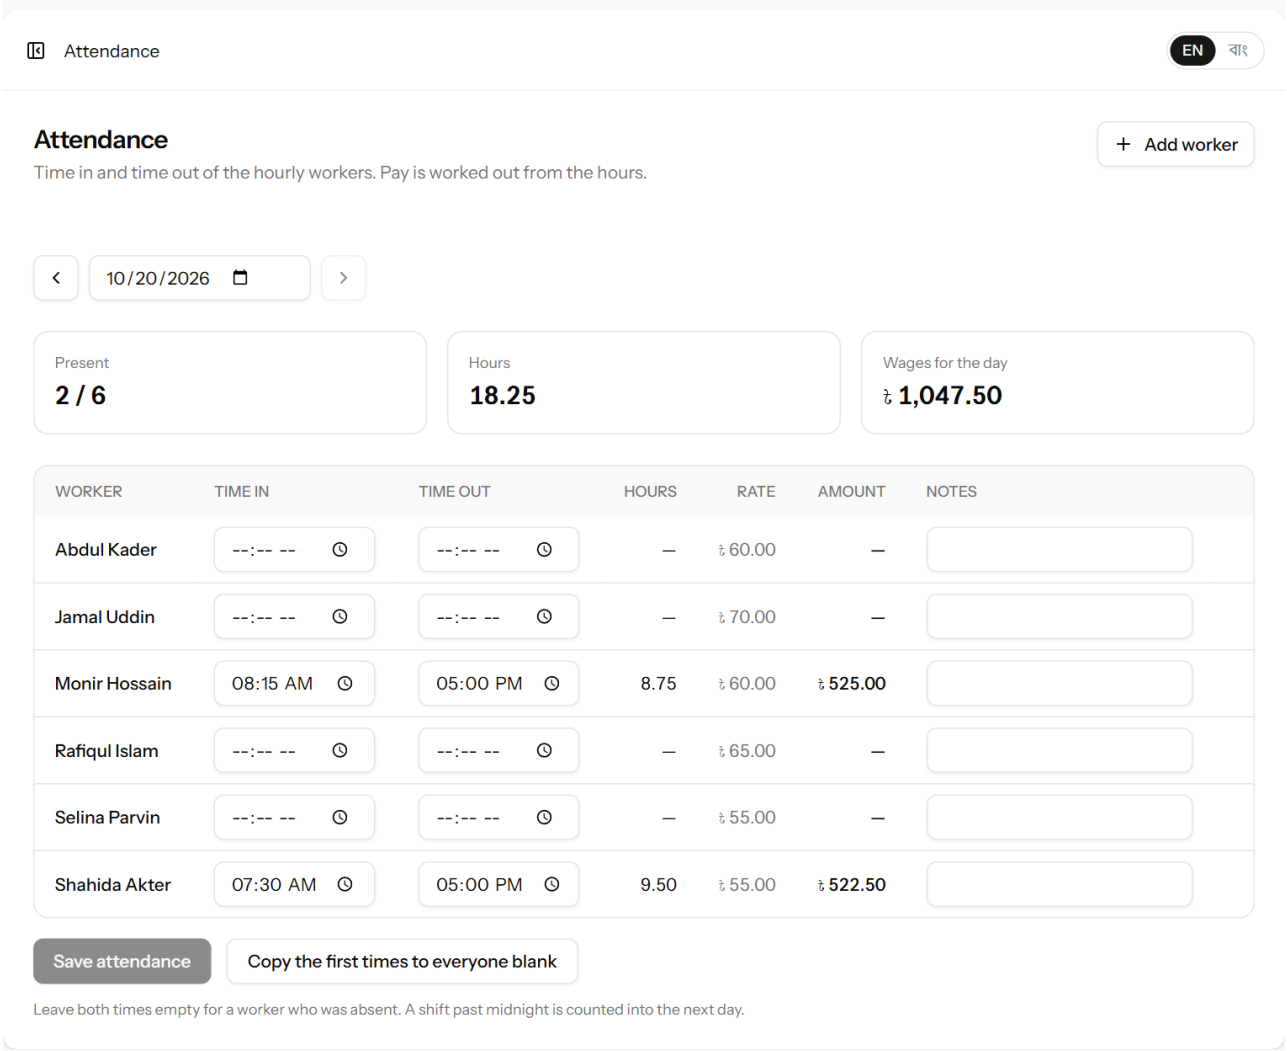

Figure 41. *The attendance sheet in the middle of the day: two workers' times are in so far.*

1. Check the date. Use ‹ › or the date box for another day.
2. For each worker who came, enter **Time in** and **Time out**. The hours, rate and amount are worked out as you type, and the boxes at the top total the day.
3. Leave both times empty for a worker who was absent.
4. Click **Save attendance**.

- **Copy the first times to everyone blank** puts the first filled-in times into every empty line — useful when most workers keep the same hours. Then change the few that differ, and clear the absent ones.
- A night shift past midnight is counted correctly: 21:00 to 05:00 is 8 hours.
- To correct a day, change the times and save again. To remove a worker's day, clear both times and save. Lines older than three days are locked (chapter 16).

> **Worked example:** Monir Hossain, ৳60 an hour, in at 08:15 and out at 17:00: 8.75 hours × ৳60 = **৳525.00**.
>
> Jamal Uddin, ৳70 an hour, night shift 21:00 to 05:00: 8 hours × ৳70 = **৳560.00**.

13.3 Contract work

Workforce → **Contract work** lists the piece work done on one day, with the day's total at the bottom.

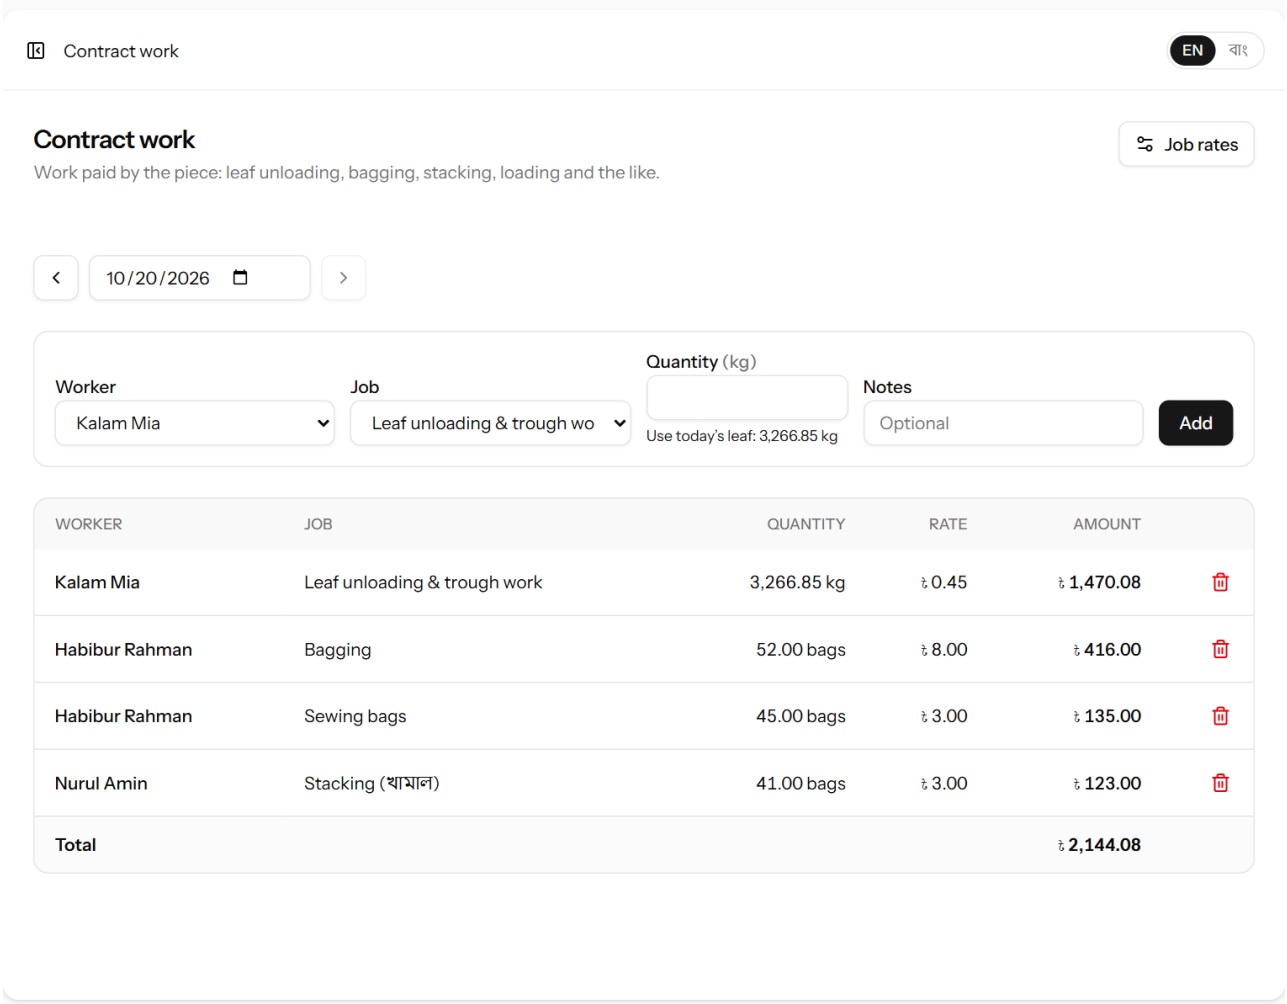

Figure 42. *Recording contract work. For a job paid per kg, the day's leaf can be filled in with one click.*

1. Choose the **Worker** (only contract workers are listed) and the **Job**. Each job shows its rate and unit.
2. Enter the **Quantity** in the job's unit (kg, bags, tons or jobs). For a job paid per kg, click **Use today's leaf** to fill in the day's net leaf.
3. Click **Add**. The line appears in the list with its amount. The rate is copied from the job at this moment.

Delete a line entered by mistake with the red bin symbol (within three days), and add it again correctly.

> **Worked example:** Leaf unloading at ৳0.45 per kg, 3,266.85 kg = **৳1,470.08**. Bagging 52 bags at ৳8 = **৳416.00**.

13.4 Job rates

Workforce → **Job rates** (manager and administrator only) holds the contract jobs and what each pays.

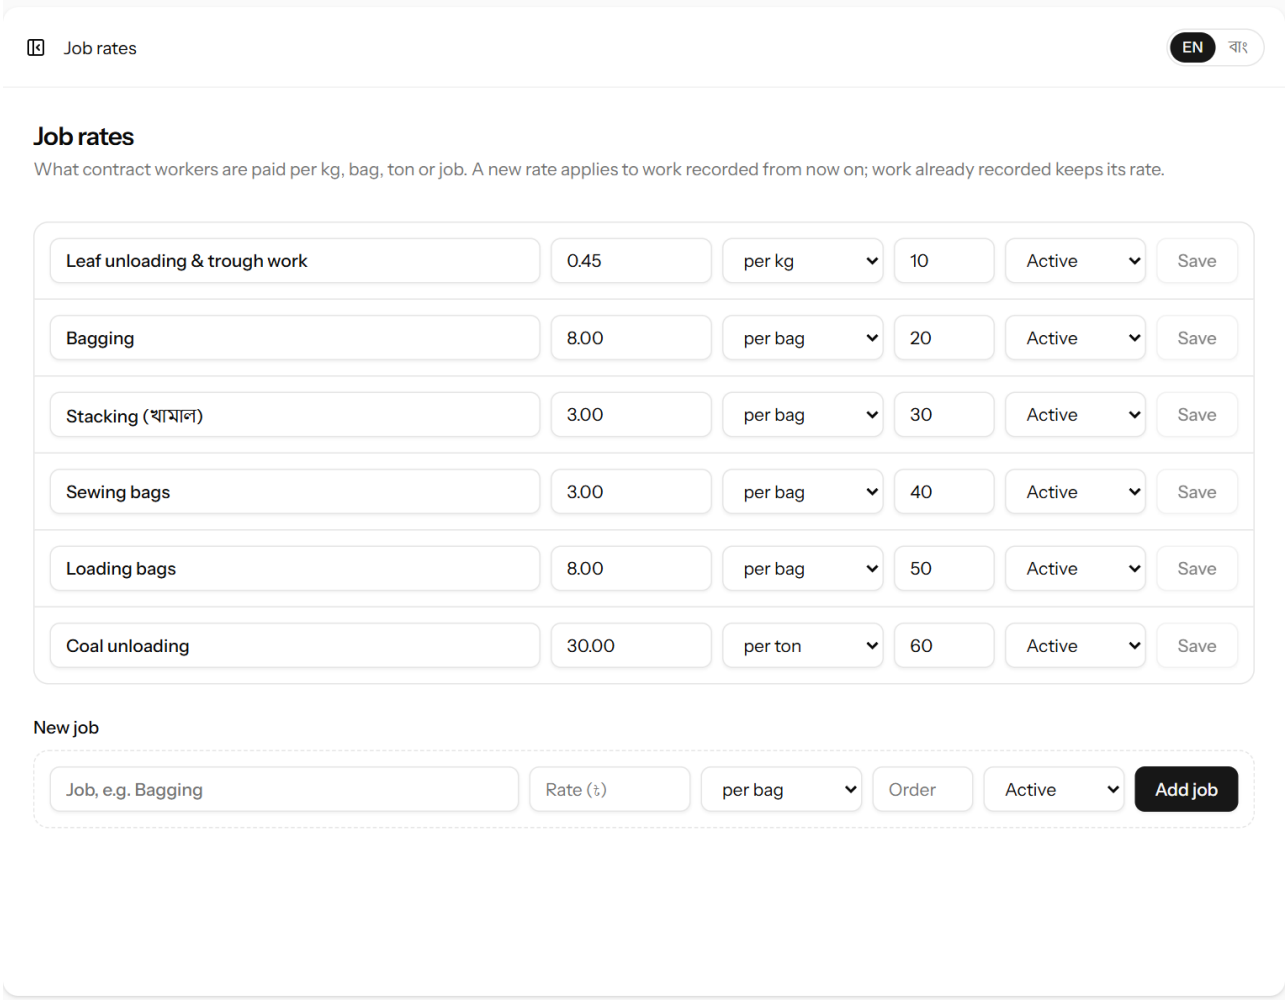

Figure 43. *The contract jobs and their rates.*

Change a job's rate or unit (per kg, per bag, per ton or per job) on its line and click **Save**; add a job on the **New job** line. A new rate applies to work recorded from then on — work already recorded keeps the rate it was recorded at. A job no longer done can be set to **Inactive**.

13.5 Wages: the pay sheet

Workers are paid twice a week: on **Sunday** for Thursday to Saturday, and on **Thursday** for Sunday to Wednesday. Open **Workforce** → **Wages**; it opens on the last Sunday pay period.

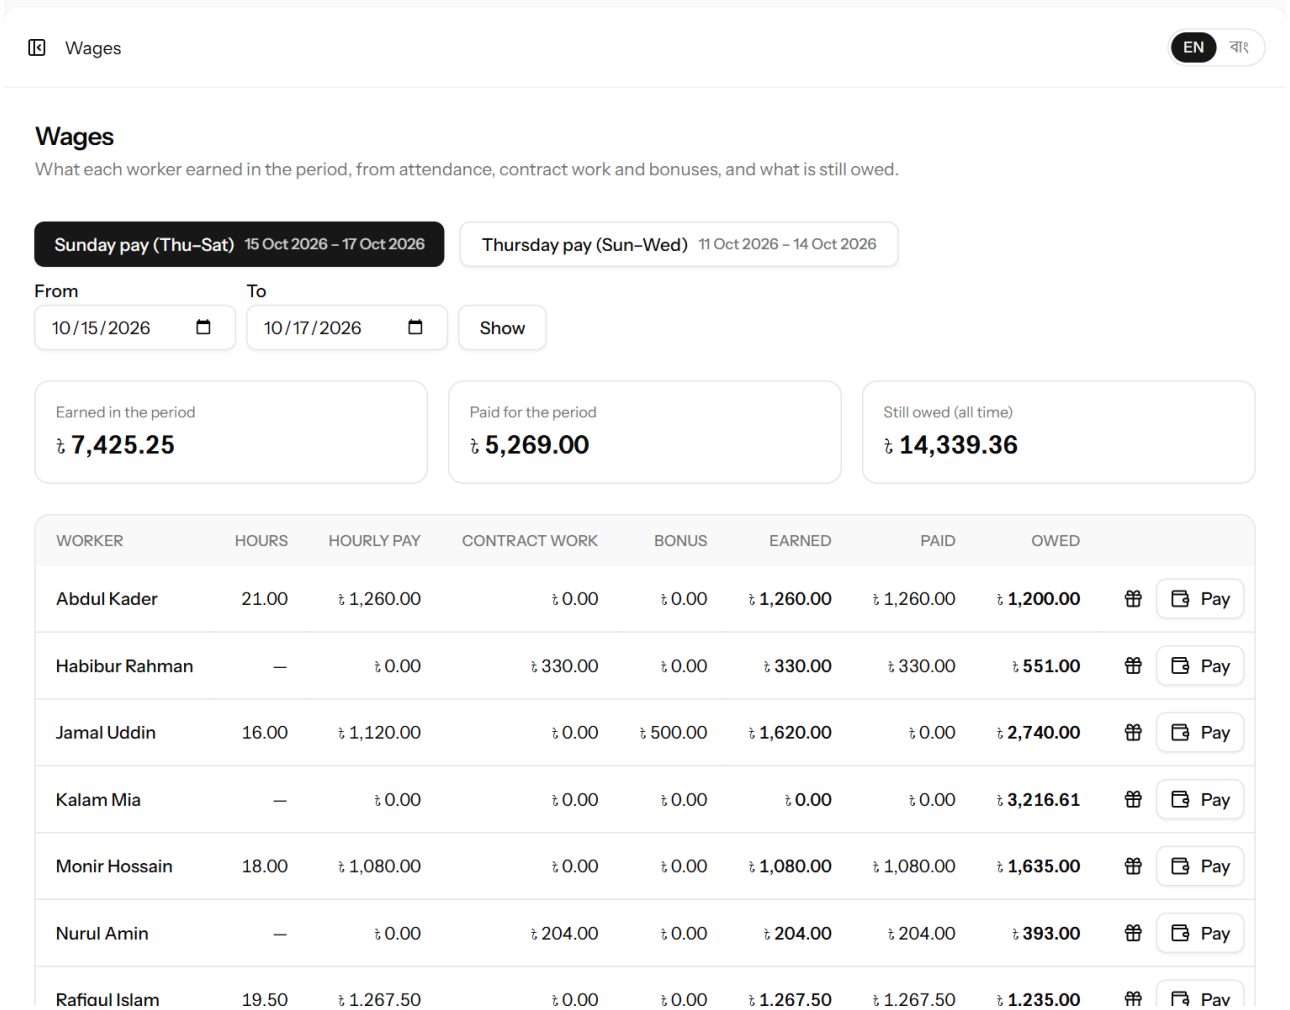

Figure 44. *The pay sheet for the Sunday pay period. Below it (not shown) are the payments made and the bonuses given.*

Part	Meaning
Sunday pay / Thursday pay	Show the last finished pay period of each kind. **From**, **To** and **Show** choose any other dates.
Hours, Hourly pay	Hours on the attendance sheet in the period, and what they earned.
Contract work	What contract work earned in the period.
Bonus	Bonuses given in the period.
Earned	Hourly pay + contract work + bonus for the period.
Paid	Payments recorded **for this period**, whenever they were handed over.
Owed	Everything the worker has ever earned, less everything paid — so it also includes days after the period, such as today.
Lists at the bottom	The payments made since the start of the period, and the bonuses given in it.

Paying a worker

1. Choose the period with **Sunday pay** or **Thursday pay**.

2. Click **Pay** on the worker's line. The amount starts as what the worker is owed.
3. Change the amount if paying less, check the date and how it was paid, and click **Record payment**.

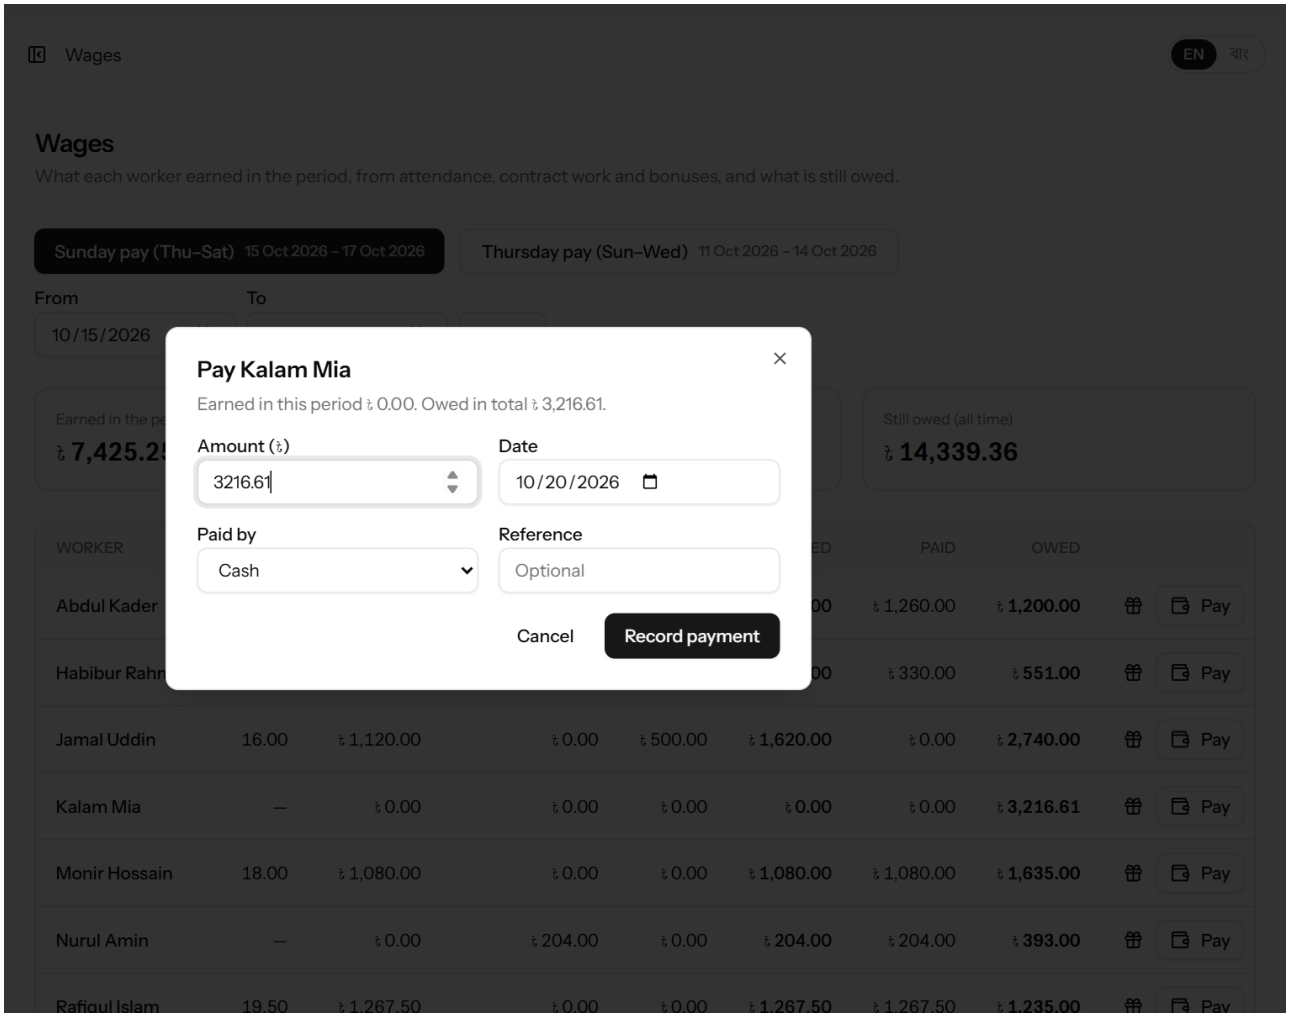

Figure 45. *Paying a contract worker.*

Giving a bonus

Click the gift symbol on the worker's line, enter the amount and the reason (for example "Eid bonus"), and click **Add bonus**. The bonus is added to what the worker has earned and is paid with the wages.

> **Note:** Wage payments appear in the cash book as money out (chapter 14). All wages — hours, contract work and bonuses — are counted as a cost in the reports on the day the work was done (chapter 15).

14. The cash book

The cash book lists every taka that came in or went out of the factory in a period, and splits it by how it was paid. Open **Accounts** → **Cash book**.

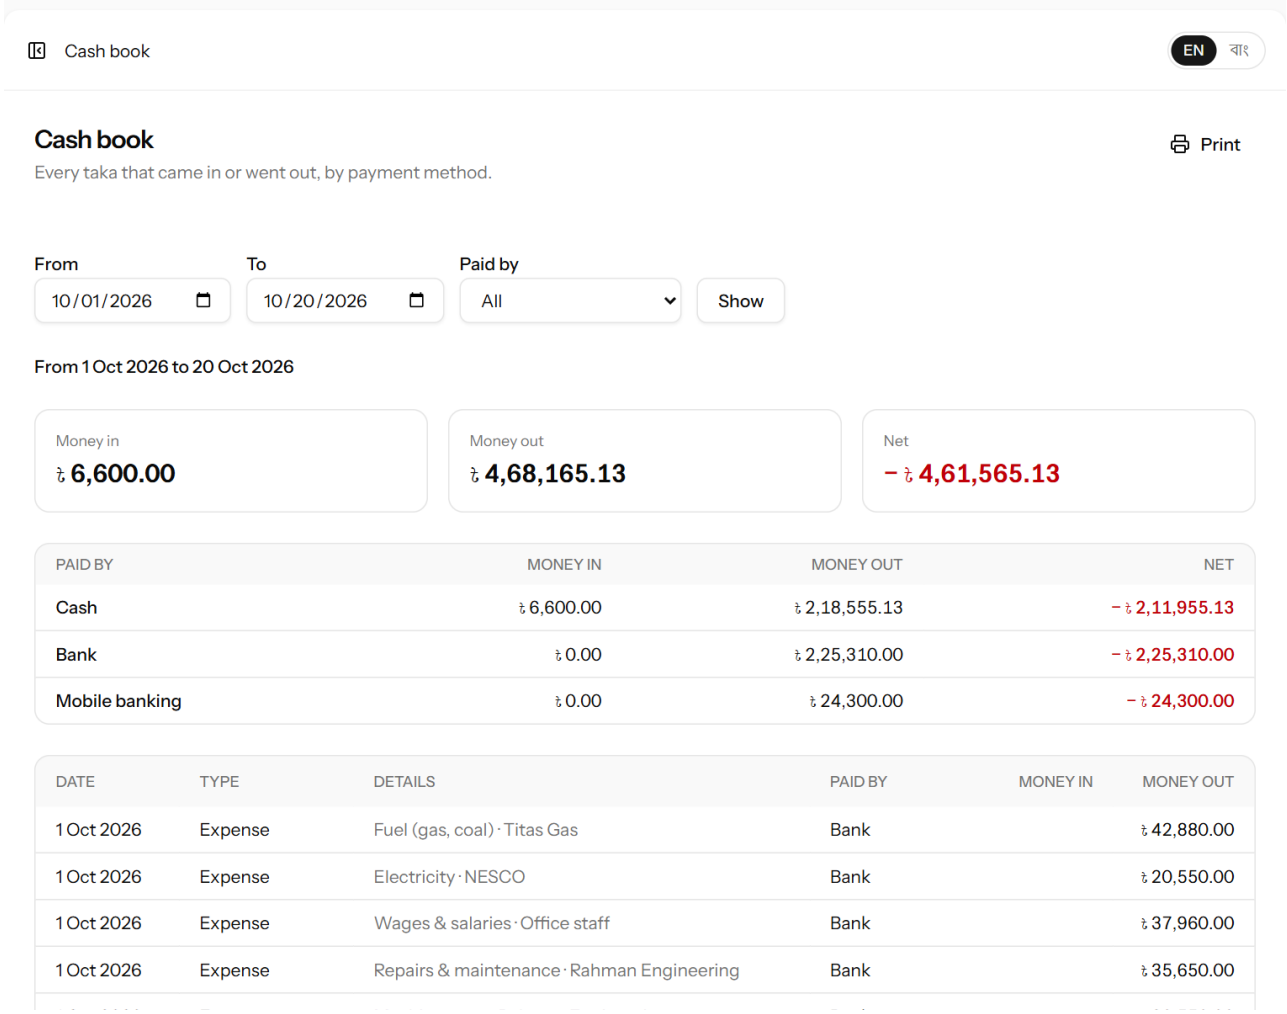

Figure 46. *The cash book for the month, split by cash, bank and mobile banking (top of the page).*

Money in	Money out
Payments received from retail customers (at the sale or later)	Payments and advances to leaf suppliers
Auction proceeds paid by the broker (always counted as bank)	Expenses (factory and vehicle)
	Wages paid to workers

- Choose the period with **From** and **To**, and optionally one payment method with **Paid by**, then click **Show**.
- **Money in**, **Money out** and **Net** total the period. A negative net (in red) means more went out than came in.
- The middle table shows the same per method. Use the **cash** line to check the cash box and the **bank** line to check the bank statement.

- The list below shows every entry, in date order.
- Click **Print** to print the cash book.

> **Note:** The cash book shows money movements only. It does not include sales still unpaid or tea still in stock — see the reports (chapter 15) for the business result.

15. Reports

The reports page shows the whole factory year month by month. It is meant above all for the owner. Open **Accounts** → **Reports** and choose the year at the top right.

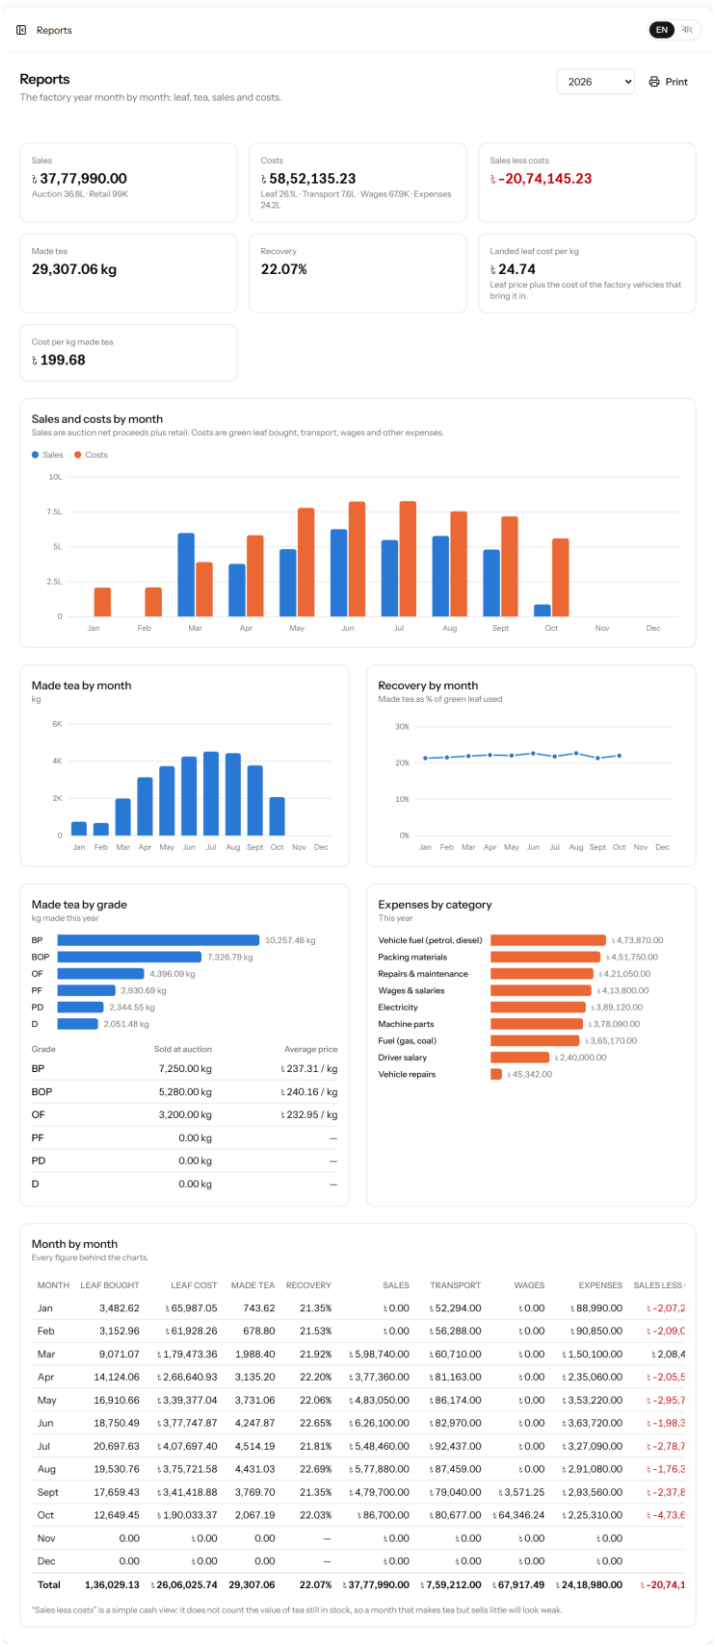

Figure 47. *The yearly report: summary, charts and the month-by-month table.*

15.1 The summary boxes

Box	How it is worked out
Sales	Auction net proceeds (by the auction date) + retail sales (by the memo date). Underneath, the two parts are shown separately.
Costs	Value of green leaf bought + **transport** (the expenses of the factory's vehicles) + **wages** (hours, contract work and bonuses, by the day the work was done) + other expenses. Underneath, the four parts are shown separately.
Sales less costs	Sales − costs. Green when positive, red when negative.
Made tea	All made tea from production batches in the year.
Recovery	Made tea ÷ green leaf used × 100 for the year.
Landed leaf cost per kg	(Value of green leaf + transport cost) ÷ kg of leaf bought. What one kg of leaf really cost by the time it reached the factory, including collecting it with the factory's own vehicles.
Cost per kg made tea	Costs ÷ made tea. What one kg of tea cost to buy and make.

> **Worked example:** In a month the factory bought 40,000 kg of leaf for ৳800,000 and spent ৳40,000 running its pickups. Landed leaf cost = (800,000 + 40,000) ÷ 40,000 = **৳21.00 per kg**, against an average price paid of ৳20.00.

15.2 The charts

- **Sales and costs by month** — blue columns for sales, orange for costs. Point at (or tap) a month to see the exact amounts.
- **Made tea by month** — the kg of tea made each month. The shape follows the plucking season.
- **Recovery by month** — the recovery % each month. A sudden fall is worth looking into (leaf quality, moisture, machinery).
- **Made tea by grade** — how the year's tea divided between grades, with a table of kg sold at auction and the **average auction price** of each grade.
- **Expenses by category** — where the running costs went.

15.3 The month-by-month table

At the bottom is every figure behind the charts: for each month the leaf bought and its cost, made tea, recovery, sales, transport, wages, other expenses, sales less costs and cost per kg, with a total line. Click **Print** to print the whole report.

> **Important:** "Sales less costs" is a simple cash view. It does not count the value of tea still in stock. In a month when a lot of tea is made but little is sold (for example at the start of the season), the figure will look weak even though the tea in stock has value. Read it together with the stock page.

16. Locked entries and the “edited” mark

To keep the records trustworthy, an entry can be changed freely only while it is fresh. After that, a change needs the administrator’s approval, and every change leaves a visible mark.

16.1 The three-day rule

Every entry — a delivery, a day’s leaf rates, a supplier payment, a production batch, the packing of an auction invoice, a retail sale, a customer payment, an expense, an attendance line or a piece of contract work — can be corrected or deleted by the manager for **three days** after it was recorded. After that it is **locked**: instead of the pencil and bin, its line shows **Locked** with a padlock.

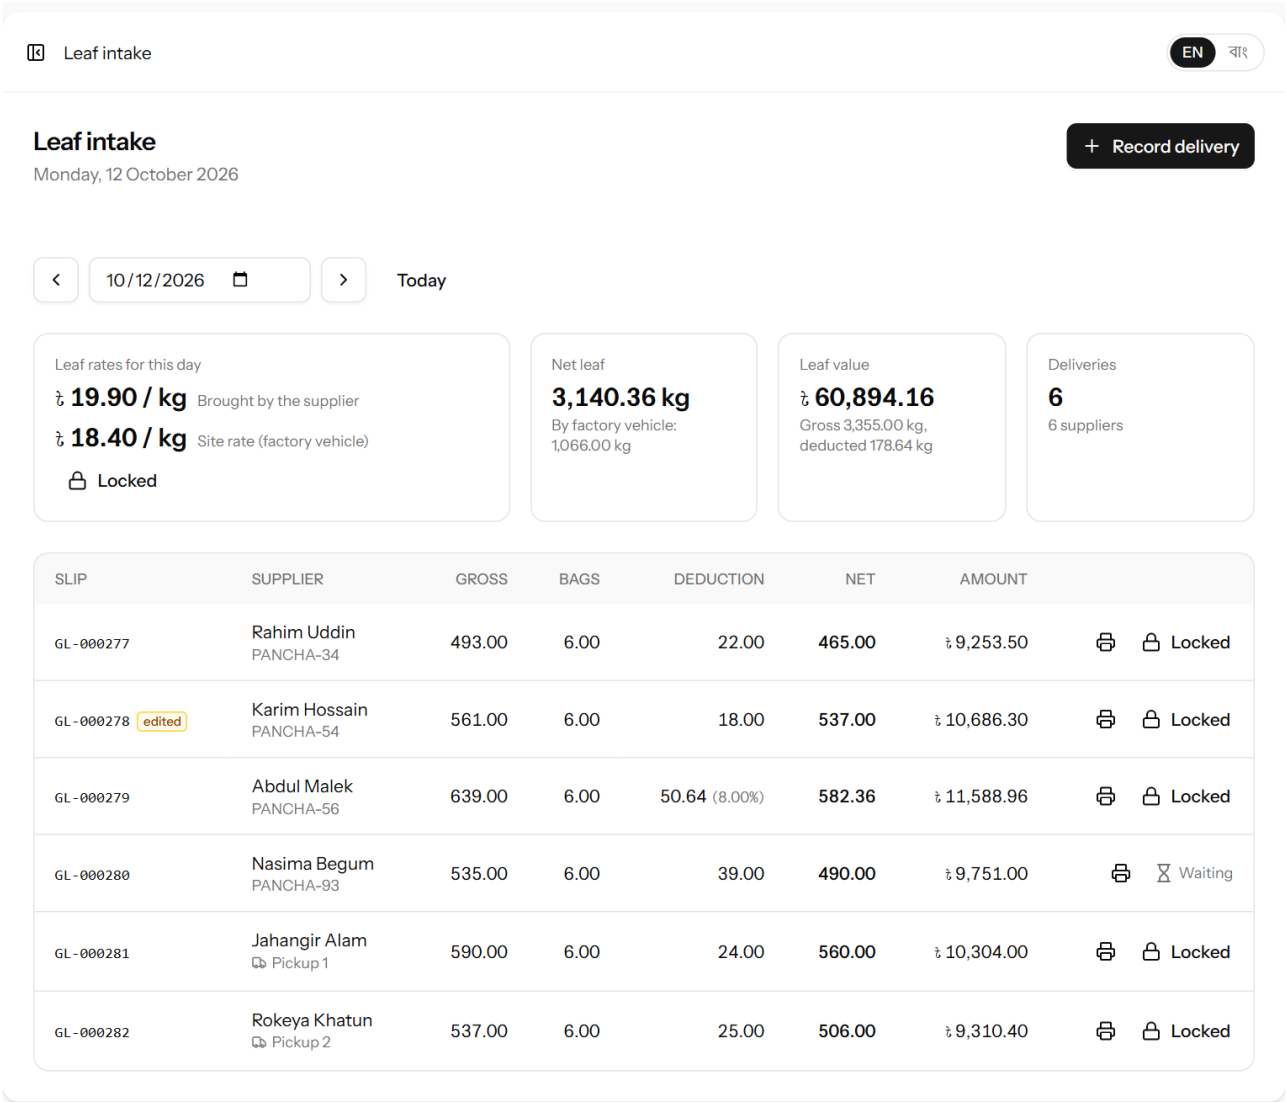

Figure 48. *A day more than three days ago: the rates and every delivery are locked. One delivery was corrected earlier (edited), and for one an unlock is waiting for the administrator.*

- The three days count from when the entry was **recorded** in the system, not from the date written on it.
- Locked entries count exactly as before in balances, statements, stock, the dashboard and the reports. Locking only stops changes.
- On an auction invoice only the packing is locked; the dispatch, result and payment can always be filled in (10.4).

- The administrator is never locked out. The owner never changes entries in any case.

16.2 Asking for an entry to be unlocked

1. Click **Locked** on the entry's line.
2. In the window that opens, write what needs correcting — for example "Bags weight entered as 16 kg, it was 6 kg".
3. Click **Send request**. The line now shows **Waiting** with an hourglass, and the administrator sees the request (17.3).
4. When the administrator approves, the entry opens again for **24 hours**. Make the correction within that time; afterwards it locks again. If the request is rejected, the line shows **Locked** again.

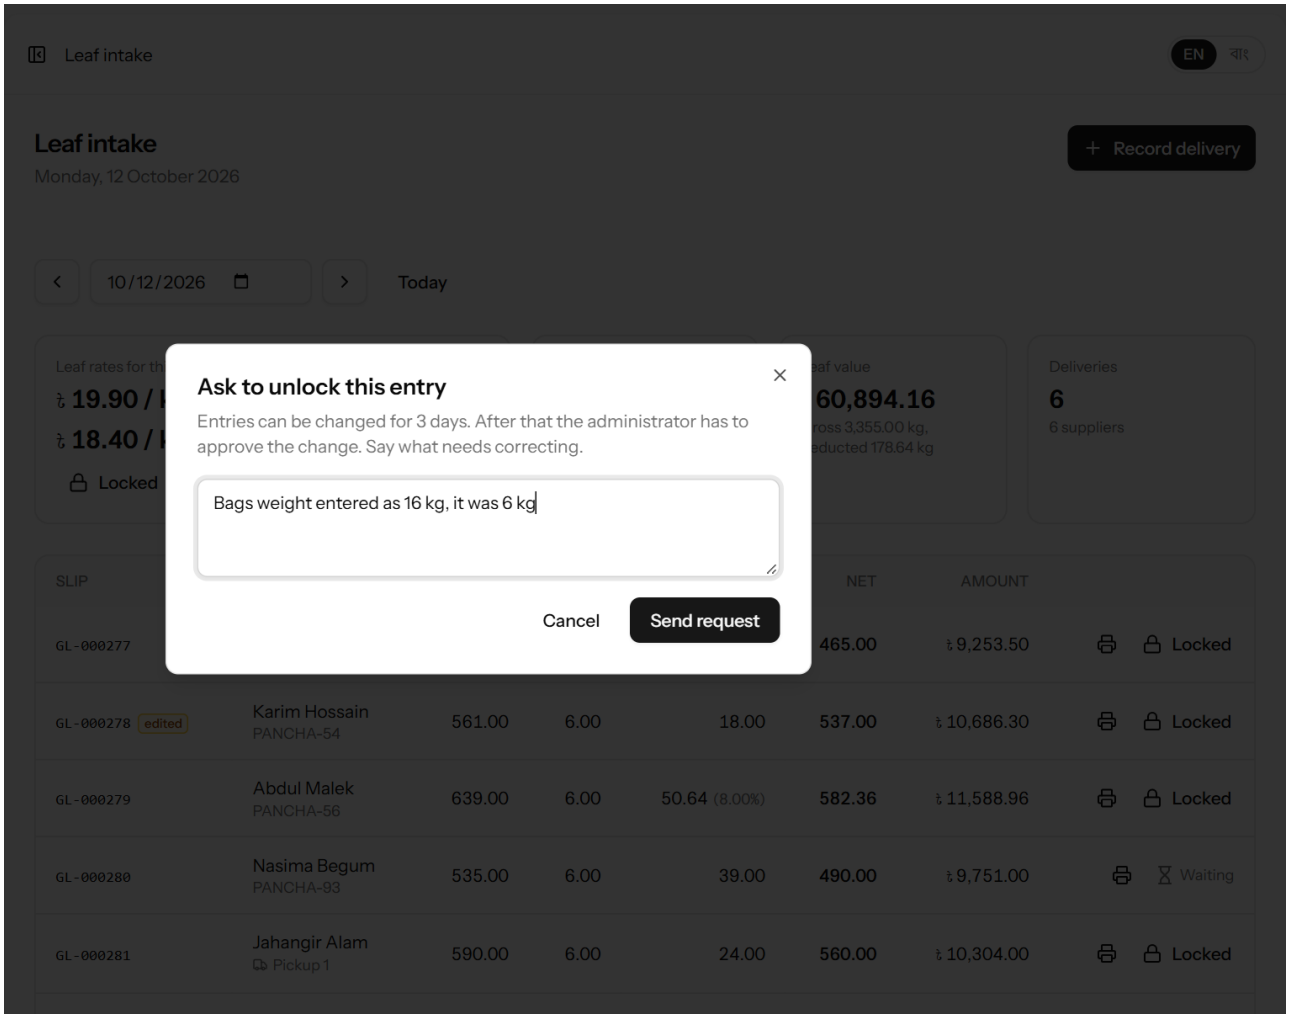

Figure 49. *Asking the administrator to unlock a delivery.*

> **Tip:** Look over each day's entries the next morning. A mistake found within three days can be corrected straight away, without a request.

16.3 The "edited" mark

When an entry is changed after it was first saved, a small orange **edited** mark appears next to it — like an edited message in WhatsApp. Point at the mark (or tap it on a phone) to see the date and time of the change. The activity log (17.2) shows exactly what was changed and by whom.

Changes the system makes by itself do not count: when a day’s rate is set and its deliveries are priced, they are not marked as edited. On an auction invoice only changes to the packing count; filling in the dispatch, result and payment does not.

17. Administration (administrator only)

These pages are only visible to the administrator, under **Administration** in the menu.

17.1 Users

Open **Administration** → **Users** to see everyone who can sign in, with their role, language and whether the account is active.

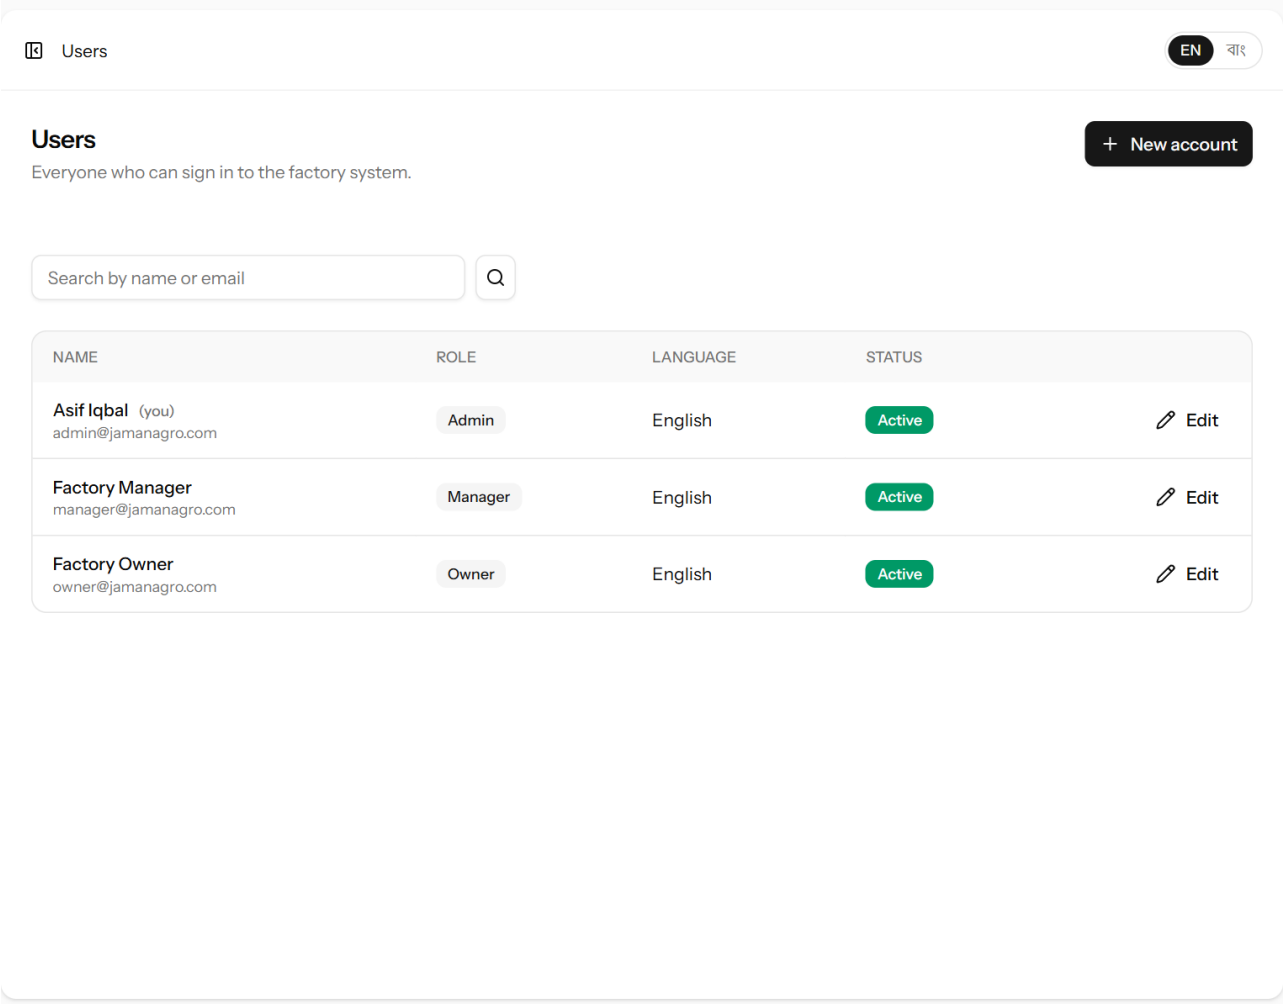

Figure 50. *The list of user accounts.*

Creating an account

1. Click **New account**.
2. Fill in the form and click **Create account**.
3. Give the person their email address and password, and ask them to change the password after their first sign-in (chapter 18.2).

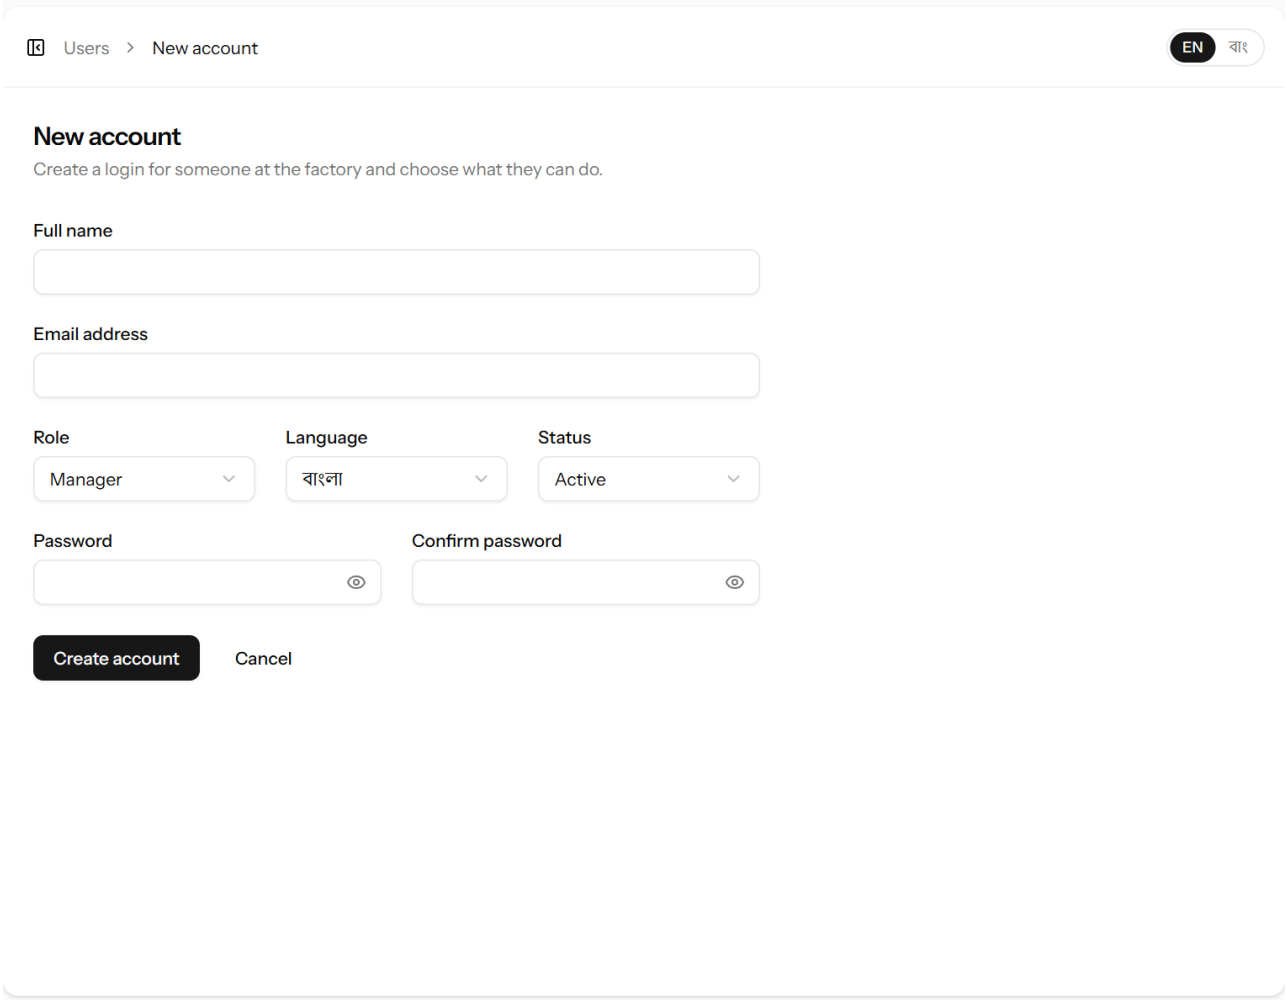

Figure 51. *Creating an account.*

Field	What it means	Required?
Full name	The person's name, shown in the menu and on slips ("Recorded by").	Yes
Email address	What they sign in with. Must be unique.	Yes
Role	**Admin**, **Manager** or **Owner** — see 1.2 and Appendix A.	Yes
Language	The language the system opens in for this person. They can change it themselves.	Yes
Status	**Active** can sign in; **Inactive** cannot.	Yes
Password / **Confirm password**	Their first password, typed twice.	Yes (new)

Changing an account, resetting a password, switching an account off

- Click **Edit** on the person's line, make the change and click **Save changes**.
- To reset a forgotten password, type a new one in **New password** and **Confirm password**. Leave both empty to keep the current password.

- To stop someone using the system (for example when they leave), set **Status** to **Inactive**. They are signed out at once and cannot sign in again; everything they recorded stays.
- Accounts are never deleted, so the history of who did what is never lost.

> **Important:** You cannot change your own role or switch off your own account. This stops the administrator from locking themselves out by mistake.

17.2 The activity log

Open **Administration** → **Activity log** to see every sign-in, sign-out and every change made in the system, newest first.

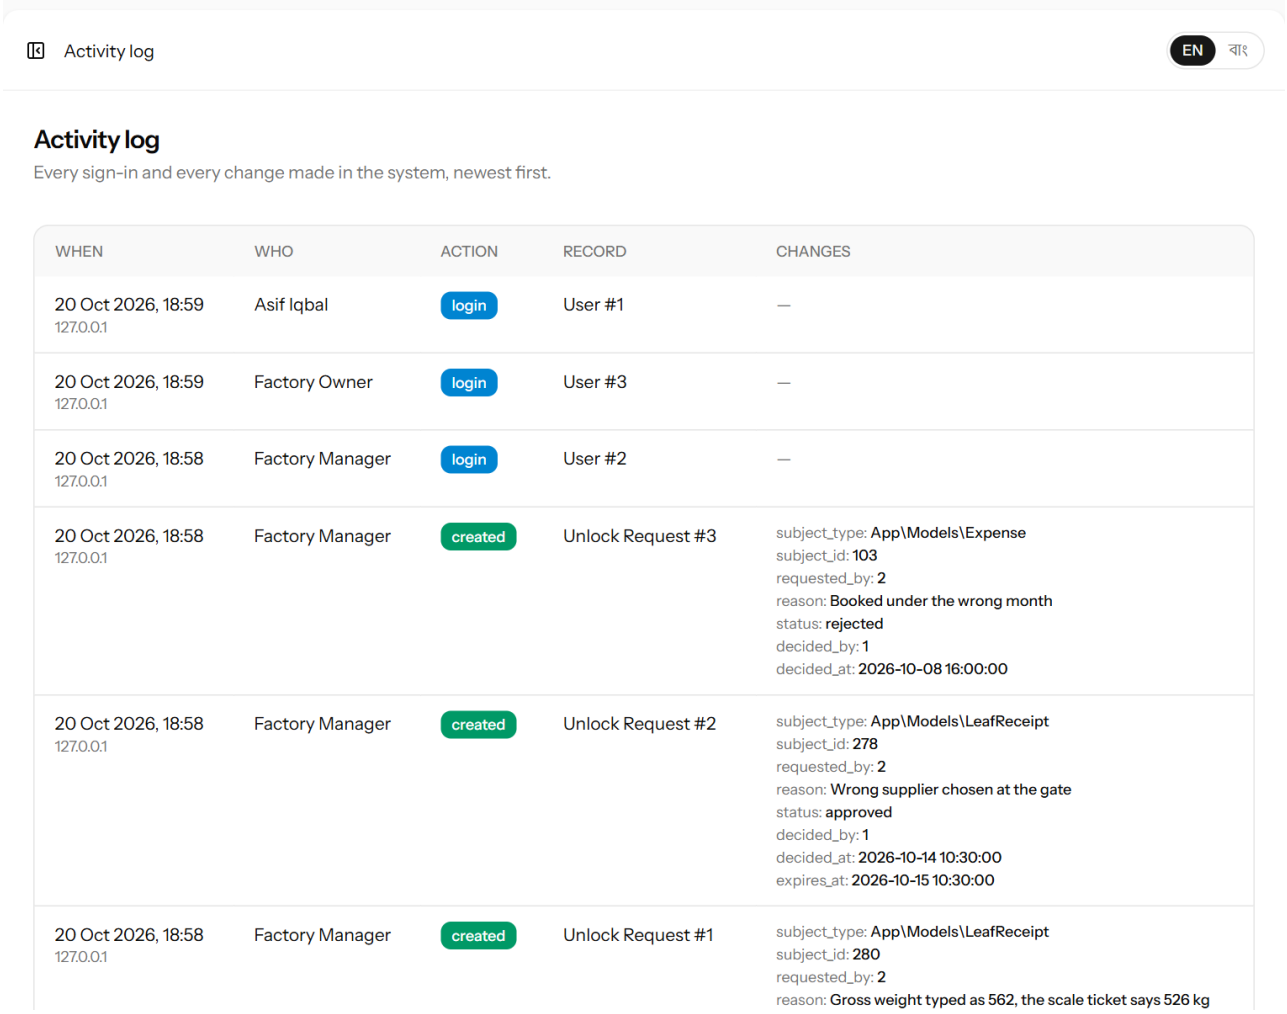

Figure 52. *The activity log: who did what and when, with the values.*

Column	Meaning
When	Date and time, and the internet address of the computer used.
Who	The person who made the change.
Action	**created**, **updated**, **deleted**, **login** or **logout**.
Record	What was changed, for example “Leaf Receipt #289” or “Supplier Payment #55”.
Changes	The values. For an update, the old value is crossed out and followed by the new one. Passwords are never shown.

17.3 Unlock requests

When the manager asks for a locked entry to be unlocked (16.2), the request appears under **Administration → Unlock requests**. The number of requests waiting is shown in an orange badge next to the menu item.

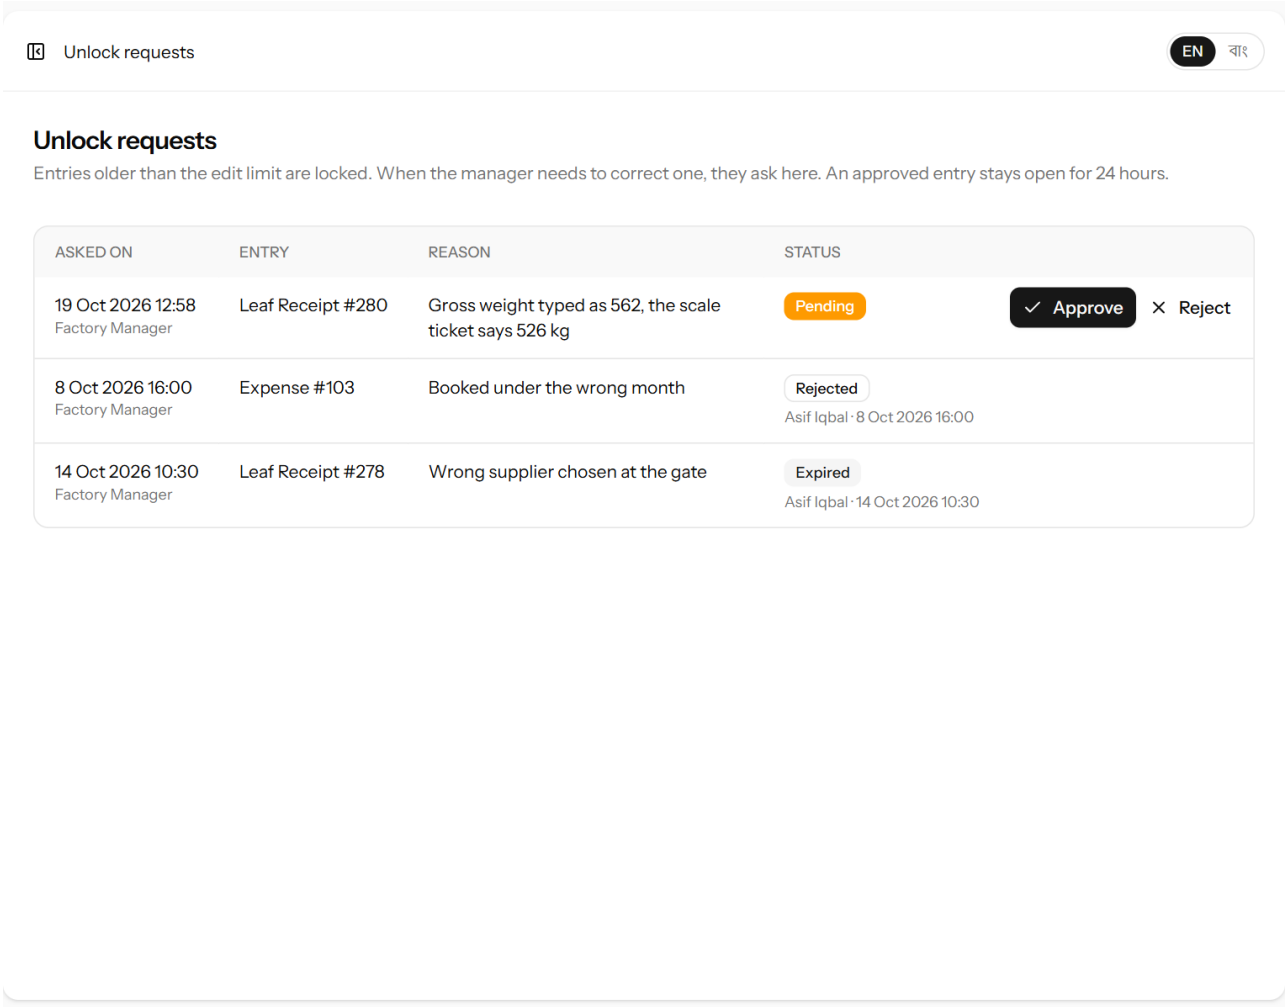

Figure 53. *Unlock requests: one waiting, one approved and since expired, one rejected.*

Column	Meaning
Asked on	When the request was made, and by whom.
Entry	What is to be unlocked, for example “Leaf Receipt #280”.
Reason	What the manager wants to correct.
Status	**Pending** — waiting for you. **Unlocked** — approved and still open. **Expired** — approved, but the 24 hours are over. **Rejected** — refused. Under it: who decided, and when.

- Click **Approve** to open the entry for 24 hours, or **Reject** to keep it locked. The manager sees the result on the entry’s line.
- Before approving, check the reason against the paper record — the weighing ticket, bill or voucher.

- Every change made while the entry is open is written to the activity log, and the entry gets the **edited** mark.

> **Note:** As administrator you are never locked out. You can correct an old entry yourself without a request; the change is logged as usual.

18. Your own settings

Every user can change their own name, email address, password and the look of the screen. Click your name at the bottom of the menu and choose **Settings**.

18.1 Profile

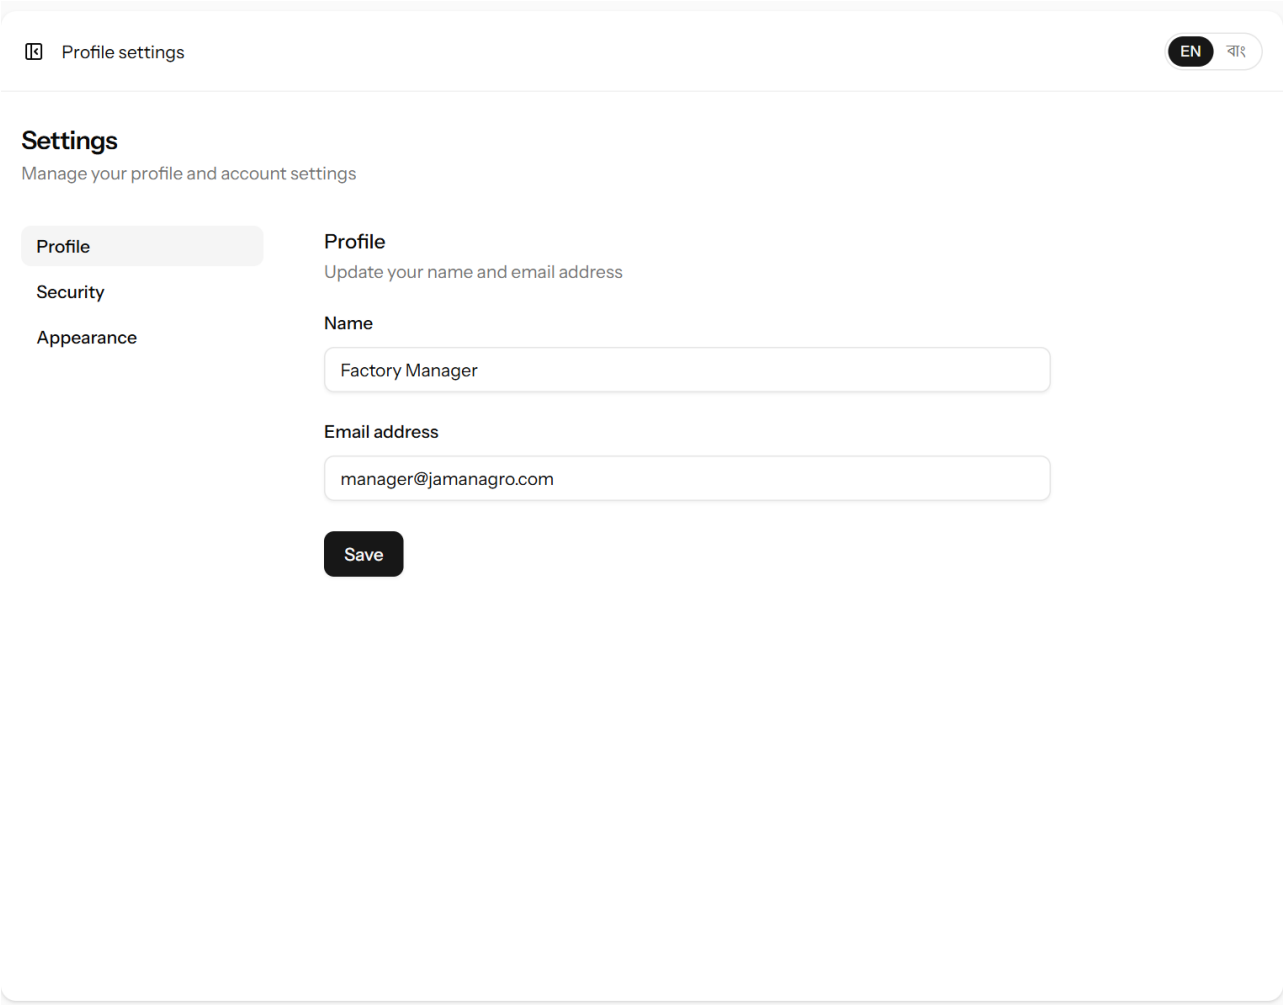

Figure 54. *Changing your name and email address.*

Change your **Name** or **Email address** and click **Save**. If you change your email, use the new one to sign in next time.

18.2 Security: changing your password

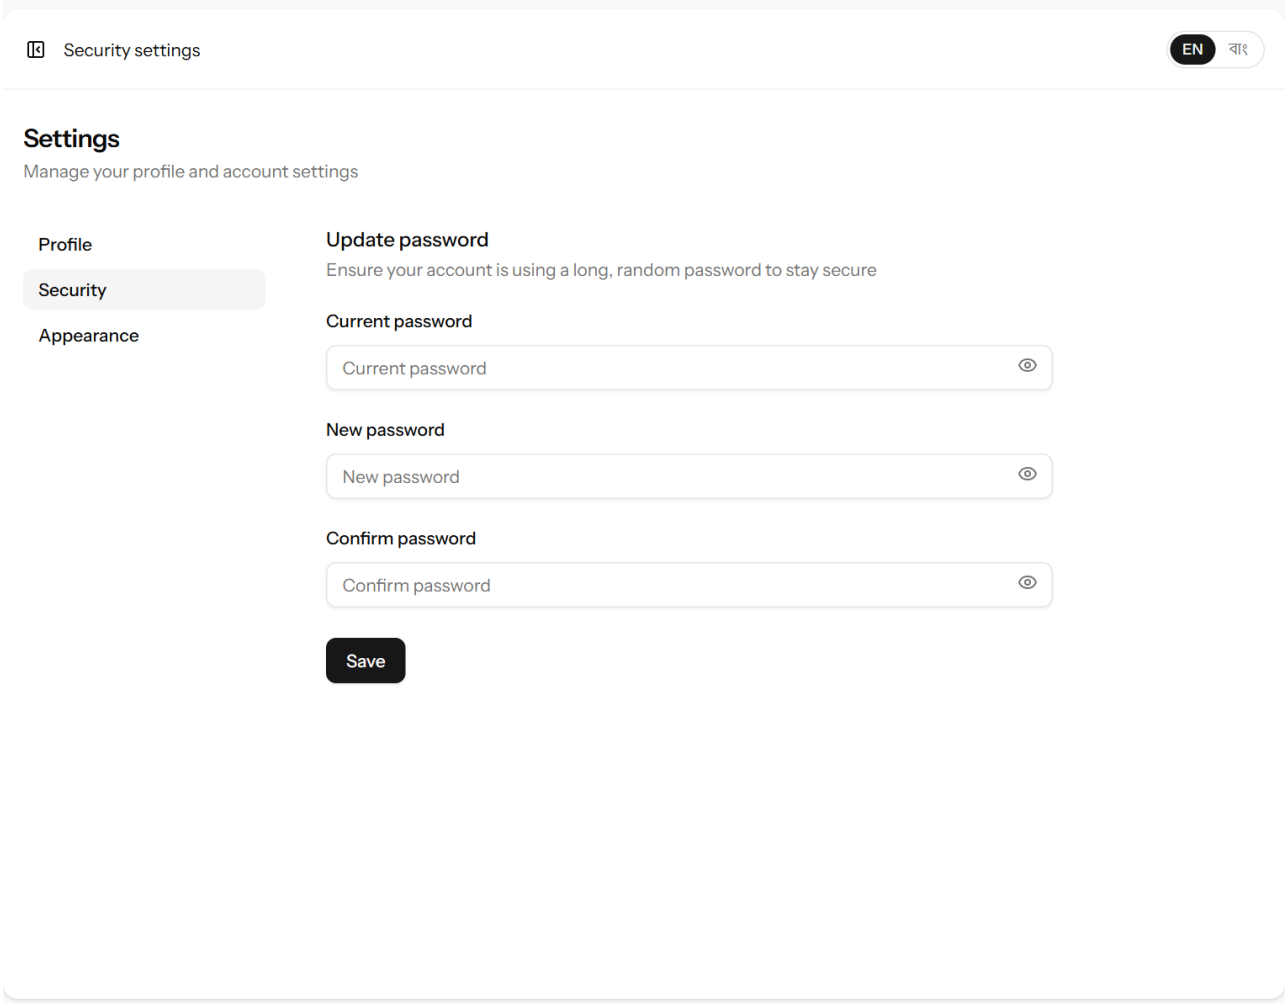

Figure 55. *Changing your password.*

1. Click **Security**.
2. Type your **Current password**.
3. Type the new password in **New password** and again in **Confirm password**.
4. Click **Save**.

> **Tip:** Use a long password that others cannot guess, and do not share it. Every change in the system is recorded under the name of the person signed in.

18.3 Appearance

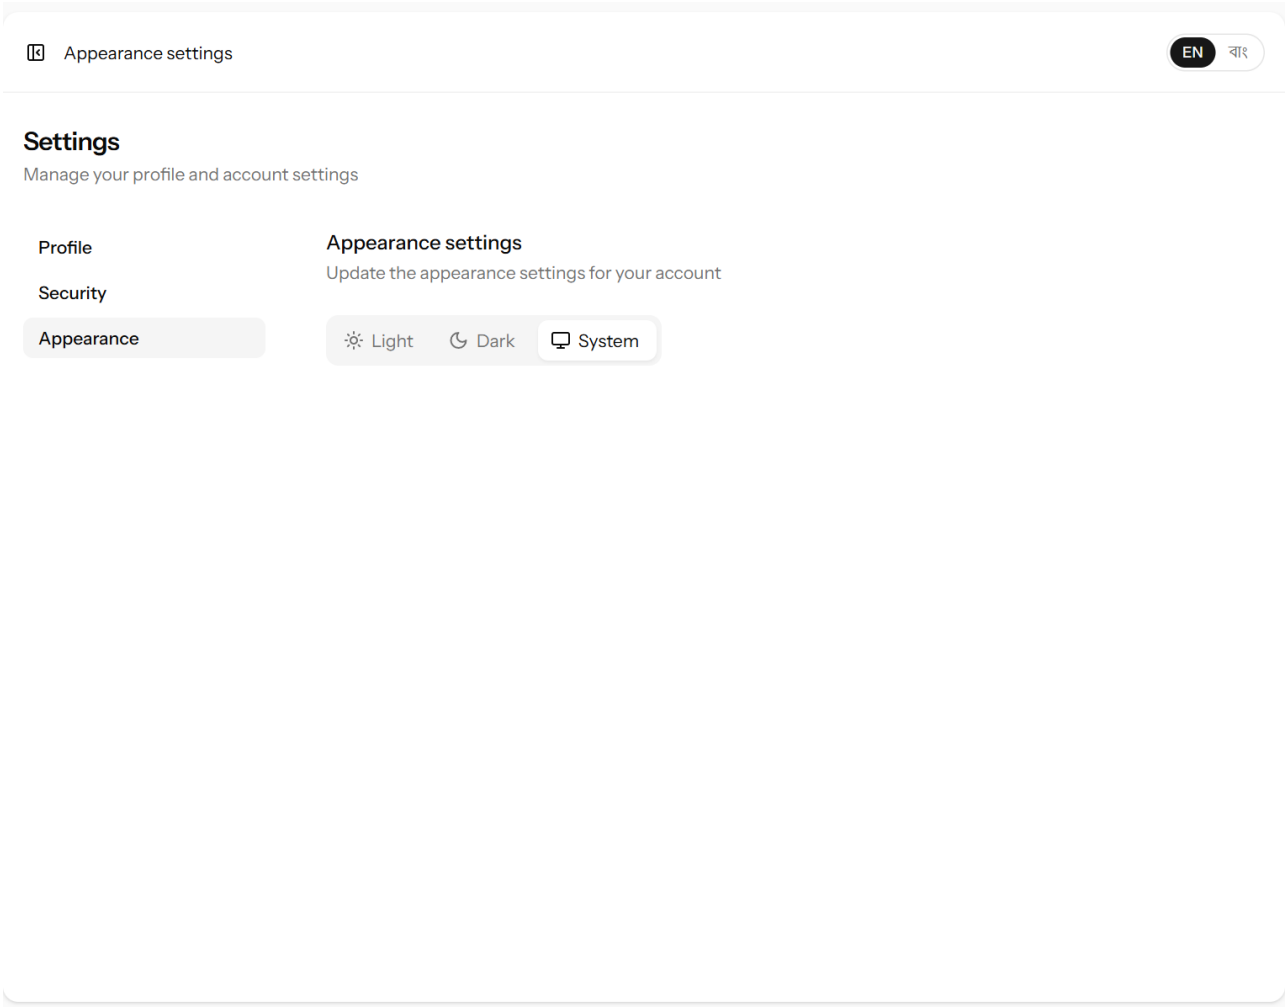

Figure 56. *Choosing light, dark or system appearance.*

Choose **Light**, **Dark**, or **System** (follow the computer's or phone's own setting). Dark mode is easier on the eyes at night.

19. Rules the system enforces, and messages you may see

The system checks every entry before saving it. When something is not allowed, it shows a message — usually in red under the field concerned — and saves nothing. This table lists the main rules and what to do.

Message or situation	Why	What to do
"This would leave less than zero kg in stock for PF."	An invoice, sale, adjustment or batch change would take more tea of that grade than is in stock.	Check the stock page. Correct the quantity, or record the missing production first.
"A sale without a customer must be paid in full."	Walk-in sales cannot be on credit.	Choose the customer, or enter the full amount as received.
"Record the auction price before the payment."	A payment date was entered on an invoice with no auction price.	Fill in **Sold on** and **Price per kg** first.
"A sold invoice cannot be deleted."	Sold invoices are part of the accounts.	Correct the invoice instead of deleting it.
"This payment belongs to a sale. Cancel the sale instead."	Money taken with a retail sale is tied to the memo.	Cancel the sale (11.4) and write it again.
"…has already been taken."	A supplier code, invoice number, grade code, email or category name is already used.	Use a different code or number.
A date "must be a date before or equal to today"	Things that have not happened cannot be recorded.	Check the date.
Bags weight must be less than gross	The bags cannot weigh more than the whole delivery.	Check the weights.
"Enter the made tea of at least one grade."	A batch with no tea.	Enter the kg for the grades made.
"The same grade … has a duplicate value"	A grade appears twice on one memo.	Put the whole quantity on one line.
Deliveries show "Rate pending"	The day's rate — or, for factory-collected leaf, the site rate — has not been set.	Set the rate or site rate (6.2).
"This entry is older than 3 days and is locked…"	The entry was recorded more than three days ago.	Ask the administrator to unlock it (16.2).
"The deduction must be less than the leaf weight…"	A kg deduction as large as the whole delivery.	Check the kg, or click **%** if you meant a percentage.
"A percentage cannot be more than 100."	A % deduction above 100.	Check the figure, or click **kg** if you meant kilograms.
A vehicle field "is required"	Factory-collected leaf, or a vehicle expense, without the vehicle.	Choose the vehicle. Add it under **Vehicles** first if it is new (6.6).

Message or situation	Why	What to do
The site rate “must be less than or equal to” the rate	The site rate was typed higher than the supplier rate.	Check both rates.
“Check the times: both time in and time out are needed.”	Only one of the two times was filled on the attendance sheet.	Fill in both, or clear both for an absent worker.
Recovery shown in orange	Below 15% or above 30%.	Re-check the leaf and made tea figures.
“No active account matches…” at sign-in	Wrong email or password, or the account is switched off.	Check the spelling; otherwise ask the administrator.
A page says 403 / “Forbidden”	Your role is not allowed on that page (for example the owner on an entry form).	Ask the manager or administrator to make the entry.

20. Frequently asked questions

We found a mistake in last week's delivery.

It is locked. Click **Locked** on its line, explain the mistake and send the request (16.2). Once the administrator approves, correct it within 24 hours.

Which rate does a delivery get?

Leaf the supplier brought gets the day's rate; leaf collected by a factory vehicle gets the day's site rate. If the wrong one was chosen, edit the delivery and change **How did the leaf arrive?** — it is re-priced at once.

Do we have to deduct moisture in kg?

No. kg is the default because that is how the factory usually works, but click **%** beside the box to enter a percentage for any delivery.

A worker wants part of their wages before pay day.

Click **Pay** on the **Wages** page and record the amount given. It is taken off what the worker is owed; on pay day pay the rest.

Should we still use the "Wages & salaries" expense category?

Only for salaried staff who are not paid through the **Wages** page. Daily and contract workers' pay is already counted from attendance and contract work (12.3).

A contract job rate went up.

Change it in **Job rates** (13.4). Work already recorded keeps the old rate; new work gets the new one.

A supplier says the amount on their slip is wrong. What happened?

If the slip was printed before the day's rate was set, it shows "Rate pending". If the rate was changed after printing, the amount on the old slip is out of date. Open the delivery, check the weights, and print the slip again.

We weighed a delivery under the wrong supplier.

Open the delivery from **Leaf intake** (pencil symbol), choose the right supplier and save. Both suppliers' balances update at once. If the delivery is already locked, ask for it to be unlocked first (16.2).

Can we pay a supplier before the rate is set?

Yes. Record the payment as usual. The supplier's balance will look like an advance until the rate is set and the leaf is priced.

How do we record a fertiliser loan to a garden?

As a supplier payment of type **Advance**, with a note. It is recovered automatically as the supplier's leaf is priced.

The stock in the system is different from the store.

First check that all production, invoices and sales are entered. Then correct the remaining difference with **Adjust stock**, giving the reason (9.2).

An auction lot did not sell. What do we do?

Leave the invoice as **Dispatched**. When it is sold in a later auction, update the sale and lot numbers and enter the result then.

A retail customer returns some tea.

Cancel the memo and write a new one with the correct quantity. If the money was already received separately, the customer's balance will show it as an advance.

Why does the report show a loss in March when we made a lot of tea?

"Sales less costs" counts tea only when it is sold. Tea made in March and sold in May shows as a cost in March and a sale in May. See 15.3.

Can the owner change anything?

No. The owner can see and print everything but cannot enter or change data. This keeps the records in the manager's hands and the owner's view independent.

Someone left the factory. What about their account?

The administrator sets it to **Inactive** (17.1). Their past entries stay, and the activity log still shows their name.

Can we use the system without internet?

No. The system runs on a server and needs a connection. On a phone, mobile data is enough.

How do we make a PDF of a statement to send by WhatsApp or email?

Click **Print** on the statement, and in the print window choose "Save as PDF" as the printer.

Appendix A. Who can use which screen

Screen	Admin	Manager	Owner
Dashboard	See	See	See
Go-live checklist	See	See	—

Appendix C. Glossary

Term	বাংলা	Meaning
Advance	অগ্রিম	Money paid to a supplier before their leaf, recovered from future leaf.
Auction centre	নিলাম কেন্দ্র	Where the tea auction is held.
Balance	জের	What is owed on an account at a point in time.
Broker	ব্রোকার	The company that catalogues and sells tea at auction for the factory.
Broker deductions	ব্রোকারের কর্তন	Brokerage, warehouse charges and taxes taken from auction proceeds.
Cash book	নগদান বই	The list of all money in and out.
Contract work	চুক্তির কাজ	Work paid by the piece — per kg, bag, ton or job — at the job rates.
CTC	সিটিসি	Crush–tear–curl: the method the factory makes tea by.
Factory vehicle	কারখানার গাড়ি	One of the factory's own vehicles that collect leaf from the gardens.
Gross weight	মোট ওজন	Scale weight including bags.
Hourly worker	ঘণ্টাভিত্তিক শ্রমিক	A worker paid for the hours between time in and time out.
Invoice (auction)	নিলাম ইনভয়েস	Packages of one grade sent to auction.
Landed leaf cost	পাতার মোট খরচ (পরিবহনসহ)	Price of leaf plus the cost of bringing it in, per kg.
Leaf rate	পাতার দর	Price per kg of green leaf for one day, for leaf the supplier brings.
Locked entry	লক করা এন্ট্রি	An entry more than three days old; changing it needs the administrator's approval.
Lot / Sale no.	লট / সেল নম্বর	Numbers from the broker's auction catalogue.
Made tea	তৈরি চা	Finished, sorted tea.
Memo	মেমো	Retail sale document.
Moisture deduction	আর্দ্রতা কর্তন	Weight taken off for excess water.
Net proceeds	নিট প্রাপ্তি	Auction sale value less broker deductions.
Net weight	নিট ওজন	Weight the supplier is paid for.
Opening balance	প্রারম্ভিক জের	The balance at the start of a period or when an account was added.

Term	বাংলা	Meaning
Pay period	মজুরির সময়কাল	Thursday–Saturday (paid on Sunday) or Sunday–Wednesday (paid on Thursday).
Recovery	রিকভারি	Made tea ÷ green leaf used × 100.
Site rate	সাইট রেট	Price per kg for leaf the factory collects with its own vehicle.
Stock adjustment	মজুদ সমন্বয়	A manual correction of stock, with a reason.
Walk-in customer	সাধারণ ক্রেতা	A buyer with no account; must pay in full.
Warehouse	ওয়্যারহাউস	The auction warehouse an invoice is sent to before the sale.

Appendix D. Quick reference card

Print this page and keep it near the computer at the gate and in the office.

I want to…	Go to	Click
Record leaf at the gate	Green leaf → Leaf intake	**Record delivery** → **Save & print slip**
Set today's leaf rates	Green leaf → Leaf intake	Type the rate and site rate → **Set rate**
Reprint a weighing slip	Green leaf → Leaf intake	Printer symbol on the line
